Laptops, smartphones, and tablets are appropriate devices to access PDF Questions for Exam4Free. Therefore, you can open this PDF file and go through real Salesforce Certified Integration Architect (Integration-Architect) exam questions from any comfort zone. This version of actual Integration-Architect exam dumps is portable, latest, and regularly upgrades this document according to tweaks in sections of the actual Integration-Architect Exam Questions. The Desktop and web-based practice software is available to attempt Salesforce Certified Integration Architect (Integration-Architect) practice exam of Exam4Free for self-assessment.

Salesforce Integration-Architect Certification Exam is a globally recognized certification program that validates the expertise and skills of integration architects in designing and implementing complex integration solutions using the Salesforce platform. Salesforce Certified Integration Architect certification exam is designed for experienced integration architects who possess a deep understanding of integration patterns, data modeling, security, and performance best practices.

Salesforce Integration-Architect Certification Exam is a comprehensive test that assesses the skills of integration architects in various areas. Integration-Architect exam covers topics such as integration architecture, data architecture, security architecture, API

integration, and solution design. Integration-Architect exam consists of 60 multiple-choice questions that need to be answered within 120 minutes. The passing score for the exam is 65%.

Fast Download Latest Integration-Architect Exam Practice & Leading Offer in Qualification Exams & Practical Valid Integration-Architect Test Book

A lot of applicants have studied with Salesforce Certified Integration Architect (Integration-Architect) practice material and passed the Integration-Architect exam on the first try with their hard work and consistency. The Exam4Free assures the customers that they will pass the Integration-Architect Exam on the first try by studying from Integration-Architect exam material and if they fail to do it so they can claim their money back (terms and conditions apply). Buy It Now!

Salesforce Certified Integration Architect Sample Questions (Q97-Q102):

NEW QUESTION # 97
Northern Trail Outfitters needs to make synchronous callouts to "available-to-promise" services to query product availability and reserve inventory during the customer checkout process. What should an integration architect consider when building a scalable integration solution?

- A. The maximum query cursors open per user on the service
- B. How many concurrent service calls are being placed
- C. The number of batch jobs that can run concurrently

Answer: A

NEW QUESTION # 98
An Integration Architect has built a Salesforce application that integrates multiple systems and keeps them synchronized via Platform Events.
What is taking place if events are only being published?

- A. The platform events are being published from Apex.
- B. The platform events has a trigger in Apex.
- C. The platform events are published after the Apex transaction completes.
- D. The platform events are published immediately before the Apex transaction completes.

Answer: C

Explanation:
https://developer.salesforce.com/docs/atlas.en-us.platform_events.meta/platform_events/platform_events_define_ui.htm

NEW QUESTION # 99
Northern Trail Outfitters (NTO)has an affiliate company that would like immediate notifications of changes to opportunities in the NTO Salesforce instance. The affiliate company has a CometD client available.
Which solution is recommended in order to meet the requirement?

- A. Create a connected app in the affiliate org and select the "Accept CometD API Requests".
- B. A Implement a polling mechanism in the client that calls the SOAP API get updated method to get the ID values of each updated record.
- C. Create a PushTopic update event on the Opportunity Object to allow the subscriber to react to the streaming API.
- D. Configure External Services to call the subscriber in Apex in the Onchange Trigger event as part of the flow.

Answer: C

Explanation:
Streaming API is the best option for sending real-time notifications of changes to Salesforce data. Streaming API uses a publish-subscribe model to push relevant data to subscribers without polling. Streaming API supports PushTopic events, which are based on

SOQL queries that define the data changes to listen for. The affiliate company can subscribe to a PushTopic event on the NTO Salesforce org and receive notifications whenever the data that matches the query changes. This way, the affiliate company can be informed of any updates to the opportunities in the NTOSalesforce instance.

NEW QUESTION # 100
Universal learning (UC) is embarked on Salesforce transformation journey, UC will decommission the legacy CRM system and migrate data to Salesforce. The data migration team asked for a recommendation to optimize the performanceof the data load to Salesforce.
Which approach should used to meet the requirement?

- A. Use Bulk API to process jobs in parallel mode.
- B. Use Bulk API to process jobs in serial mode.
- C. Use Bulk API to process jobs in high performance mode.
- D. Contact Salesforce support to schedule performance load.

Answer: A

Explanation:
This is because Bulk API is a RESTful API that is optimized for loading or deleting large sets of data asynchronously. By processing jobs in parallel mode, you can take advantage of the multiple resources available on the Salesforce platform and speed up the data load. The other options are not suitable for this scenario because:
B, Contact Salesforce support to schedule performance load, is not a valid option as Salesforce does not offer such a service. You are responsible for optimizing your own data load performance.
C, Use Bulk API to process jobs in serial mode, is a slower option than parallel mode as it processes one batch at a time. This is only recommended when you have dependencies betweenrecords or when you want to preserve the order of records.
D, Use Bulk API to process jobs in high performance mode, is not a valid option as there is no such mode in Bulk API. You can only choose between parallel and serial modes.

NEW QUESTION # 101
KiA B2C Enterprise Customer has the following use case that involves processing payment froman external payment gateway service in Salesforce.
1. Customer requests Customer Service Representative (CSR) for a Service upgrade.
2. Customer provides credit card details to CSR for payment.
3. CSR submits payment information in Salesforce, and processed in a
4. CSR receives confirmation of payment.
5. CSR upgrades service for customer and confirms Customer.
external payment gateway.
This use case requires the CSR to obtain confirmation of payment before upgrading the service.
The integration with Payment gateway needs to be reliable and monitored for audit purposes.
The payment gateway service is an external RESTful service that the B2C Enterprise Customer has subscribed for.
What should an Integration Architect recommend for this integration?

- A. Make a callout to the payment gateway through ESB supporting error handling and logging for audit purposes.
- B. Build a customApex Callout to external Payment gateway service and provide success message to the CSR, the details of callouts and responses are logged for audit purposes.
- C. Use External Services feature to integrate gateway to Salesforce ensuring real-time updates the CSR and support post payment processes.
- D. Platform events allow integration to payment gateway through the exchange of real-time event data, platform events are scalable and secure.

Answer: A

Explanation:
Explanation
Make a callout to the payment gateway through ESB supporting error handling and logging for audit purposes. This solution meets the requirements of integrating with an external RESTful service, ensuring real-time updates to the CSR, and supporting post

payment processes. ESB stands for Enterprise Service Bus, which is a software architecture model that allows communication between different applications via a common bus. ESB can handle the callout to the payment gateway service, and provide error handling, logging, routing, transformation, and orchestration capabilities. ESB can also integrate with other systems or services that are involved in the post payment processes, such as billing, invoicing, or reporting.
