100% Pass Fantastic Adobe - AD0-E117 New Braindumps Sheet

No matter how good the product is users will encounter some difficult problems in the process of use. Our AD0-E117 real exam materials are not exceptional also, in order to enjoy the best product experience, as long as the user is in use process found any problem, can timely feedback to us, for the first time you check our AD0-E117 Exam Question performance, professional maintenance staff to help users solve problems. Our AD0-E117 learning reference files have a high efficient product maintenance team, and they can send the AD0-E117 exam questions to you in a few minutes.

Adobe AD0-E117 certification exam is an excellent opportunity for professionals who want to become Adobe Experience Manager Architects. AD0-E117 exam is designed to test the knowledge and skills required to architect an AEM solution that meets the technical and business requirements of an organization. Adobe Experience Manager Architect Master certification is highly valued by employers and can open up new career opportunities for professionals.

Adobe AD0-E117 Certification Exam is a comprehensive test that covers a wide range of topics related to AEM architecture. It evaluates the candidate's knowledge and skills in areas such as AEM deployment, architectural design, performance optimization, security, and integration with other Adobe products. AD0-E117 exam consists of multiple-choice questions and requires candidates to demonstrate their knowledge and experience in AEM architecture.

Adobe Experience Manager Architect Master Sample Questions (Q46-Q51):

NEW QUESTION # 46
AEM as a cloud service introduces major changes in the architecture by using containers. Which key architectural change was necessary to allow this to occur?

- A. Using MongoDB for Author environment
- B. Using sling content distribution as the replication mechanism
- C. Isolating /app and /libs from the content, configurations and state mgmt.
- D. Using Adobe 10 for asset ingestion and processing, storing it on a separate blob and providing AEM with metadata

Answer: C

NEW QUESTION # 47
A large digital agency has 10 TB of assets in their DAM where renditions for each Asset must be created without affecting performance for the authors. Which capability should the Architect recommend to meet the requirements?

- A. Reduce the number of AEM Asset versions
- B. Update dispatcher configuration to cache Assetsa
- C. Create AEM multi-threaded workflow
- D. Use AEM Asset Offloading

Answer: D

Explanation:
"AEM Asset Offloading allows for delegating asset processing tasks such as rendition generation to a separate AEM instance or service. This reduces the load on the author servers and improves performance for authors".

NEW QUESTION # 48
An AEMaaCS customer processes thousands of assets on a daily basis. A major business requirement is to push assets being published to various legacy external systems based on tagged asset metadata. Which solution would an architect choose?

- A. Use a daily scheduler to distribute assets conditionally on top-up basis during least traffic hours
- B. Use custom workflow process to push assets conditionally via activation workflow for near real time transfer
- C. Use headless application on App Builder to extend asset export using Event and Runtime
- D. Use an external application server to offload AEM load and run batch processing using Assets HTTP API

Answer: B

NEW QUESTION # 49
AEM Site users report that the web content pages render very slowly. An Architect notices that the CPU usages of the AEM

Publish instances are spiking and reviews the following entry in the log:

[Frt Nov 27 23:11:00 2019] [I] [pid 16004 (tid 140134145820416)] Current cache hit ratio: 47.94 % What should the Architect do to increase the dispatcher cache ratio and prevent the AEM Publish CPU usage spikes?

- A. Create a cron job that will delete the dispatcher cache on a regular basis
- B. Add additional AEM instances to the Publish Farm
- C. Add additional dispatcher servers
- D. Review and optimize the Dispatcher cache configuration

Answer: D

Explanation:
According to Adobe Experience Manager documentation5, dispatcher is a caching and load balancing tool that can be used to improve performance and security of AEM sites. Dispatcher cache configuration can be adjusted using various properties in the dispatcher.any file6. Creating a cron job that will delete the dispatcher cache on a regular basis is not a good idea as it will reduce the cache hit ratio and increase the load on AEM servers.

NEW QUESTION # 50

A customer's photo gallery site uses query parameters to filter photo search results. The site experiences high AEM Publish server load when users filter photos on the site. The customer would like to identify the cause of this issue.
What should the Architect investigate first?

- A. Cache-Control Headers in dispatcher.any
- B. Dispatcher load balancing configuration
- C. ignoreUrlParams configuration in dispatcher.any
- D. Volume of assets being loaded at a time

Answer: A

Explanation:
"Cache-Control Headers in dispatcher.any control how long the dispatcher caches responses from the publish server. If these headers are not configured properly, the dispatcher may cache stale or dynamic content, resulting in high server load and poor performance".

NEW QUESTION # 51
