

D-PWF-OE-00 Actual Tests | Exam D-PWF-OE-00 Reviews

What's more, part of that VCEdumps D-PWF-OE-00 dumps now are free: https://drive.google.com/open?id=1_XbKkmFHWvblAuN5WYBfryWVCOq13xuD

Our D-PWF-OE-00 study guide boosts high quality and we provide the wonderful service to the client. We boost the top-ranking expert team which compiles our D-PWF-OE-00 guide prep elaborately and check whether there is the update every day and if there is the update the system will send the update automatically to the client. The content of our D-PWF-OE-00 Preparation questions is easy to be mastered and seizes the focus to use the least amount of answers and questions to convey the most important information. And our quality of D-PWF-OE-00 exam questions is the best in this field for you to pass the D-PWF-OE-00 exam.

EMC D-PWF-OE-00 Exam Syllabus Topics:

Topic	Details
Topic 1	<ul style="list-style-type: none">PowerFlex Logical Entities: This section focuses on configuring the logical structures within PowerFlex including templates, resource groups, protection domains, fault sets, and storage pools that organize and manage storage resources.
Topic 2	<ul style="list-style-type: none">PowerFlex Components and Resource Discovery: This domain covers identifying PowerFlex hardware models and software components, using management interfaces to interact with the system, and completing essential post-installation configuration tasks.
Topic 3	<ul style="list-style-type: none">PowerFlex Upgrades: This domain covers understanding upgrade procedures and executing cluster upgrades to newer software versions.
Topic 4	<ul style="list-style-type: none">Expanding a PowerFlex Cluster: This domain focuses on cluster expansion and maintenance including using maintenance modes, adding nodes, configuring Storage Data Servers and Meta Data Managers, and understanding PowerFlex integration with APEX.
Topic 5	<ul style="list-style-type: none">PowerFlex Security: This section addresses security administration through managing user accounts and access privileges, integrating CloudLink for encryption, and configuring system alerting.
Topic 6	<ul style="list-style-type: none">PowerFlex Storage: This domain addresses daily storage operations including creating and managing volumes, configuring shared file systems, and working with storage data targets.

Exam D-PWF-OE-00 Reviews - Latest D-PWF-OE-00 Exam Online

Our exam dumps are created by our professional IT trainers who are specialized in the EMC real dumps for many years and they know the key points of test well. So we can ensure you the accuracy and valid of D-PWF-OE-00 dump pdf. Before you buy, you can download the free trial of D-PWF-OE-00 Exam Cram. If you have any problems in the course of purchasing or downloading the D-PWF-OE-00 certification dumps you can contact us anytime.

EMC Dell PowerFlex Operate Exam Sample Questions (Q31-Q36):

NEW QUESTION # 31

What steps are required to configure secure user accounts in PowerFlex? (Choose two).

- A. Assign VLANs to user accounts
- B. Enable multi-factor authentication
- C. Configure password policies
- D. Integrate PowerFlex with LDAP

Answer: C,D

Explanation:

Securing access to the management interface is a critical step in the "Day 0" or "Day 1" configuration.

* Integrate PowerFlex with LDAP (Option A): For enterprise environments, managing local users on every system is inefficient and insecure. PowerFlex supports integration with Lightweight Directory Access Protocol (LDAP) servers (like Active Directory). This allows administrators to centralize user management and map Active Directory groups to PowerFlex roles (e.g., Admin, Monitor).

* Configure password policies (Option C): For local user accounts (which are necessary for emergency access if LDAP is down), PowerFlex allows the definition of strict password policies. This includes setting requirements for password complexity (length, special characters), expiration intervals, and history (preventing reuse of old passwords).

Incorrect Options: VLANs (B) are network constructs, not user account settings. While MFA (D) is highly recommended, it is typically enforced at the Identity Provider (IdP) level (like Keycloak within PowerFlex Manager) rather than being a simple checkbox "step" inside the core SDS configuration.

NEW QUESTION # 32

Snapshots in PowerFlex are created in a writable state by default. True. False.

- A. True
- B. False

Answer: A

Explanation:

In many legacy storage arrays, a snapshot is a read-only "view" of the data, and if you want to mount it and write to it (for testing or database recovery), you must create a "Clone" or "linked clone" from that snapshot.

PowerFlex differs here. A PowerFlex snapshot is technically just another volume. It is fully writable immediately upon creation. It uses a redirect-on-write mechanism. If a host mounts a snapshot and writes to it, the new data is written to new blocks, diverging from the source volume. This makes PowerFlex snapshots extremely agile for DevOps and CI/CD workflows where writable copies are needed instantly.

NEW QUESTION # 33

During a PowerFlex deployment, which steps are required to complete resource discovery? (Choose two).

- A. Configure storage pools for metadata storage
- B. Validate network connectivity for SDS nodes
- C. Deploy vSphere for virtualization
- D. Assign IP addresses to all nodes

Answer: B,D

Explanation:

Resource discovery is the initial phase where PowerFlex Manager (PFxM) or the deployment tool identifies the hardware available to build the cluster.

* Assign IP addresses to all nodes (Option A): For the management system to "find" and communicate with the nodes (via iDRAC

or OS agents), valid IP configurations on the management network are essential.

* Validate network connectivity (Option B): Before the software can be successfully deployed, the underlying network (L2/L3) must be verified. This includes ensuring the nodes can ping the Gateway, DNS, and NTP servers, and that the data networks (for SDS-to-SDS traffic) are routed or switched correctly.

Incorrect Options: Storage pools (C) are created after the cluster is deployed. vSphere (D) is not required for "Resource Discovery" (PowerFlex can be bare metal or other hypervisors).

NEW QUESTION # 34

What is the minimum number of nodes required for creating a Fault Set in PowerFlex?

- A. 0
- B. 1
- C. 2
- D. 3

Answer: C

Explanation:

* 6 Nodes: To utilize the Fault Set feature (which provides higher availability than standard SDS grouping, typically for rack awareness), PowerFlex requires a minimum configuration.

* The Math:

* A Protection Domain requires a minimum of 3 Fault Sets to support the 2-copy mirroring (Primary, Secondary, and a third location for rebuilding if a set fails).

* Dell PowerFlex engineering requirements state that each Fault Set must contain at least 2 SDS nodes to ensure local redundancy and performance balance within the set.

* $3 \text{ Fault Sets} \times 2 \text{ Nodes} = 6 \text{ Nodes}$ minimum

NEW QUESTION # 35

Which component is upgraded first during a PowerFlex cluster upgrade?

- A. Storage Data Servers
- B. Cluster Nodes
- C. Metadata Managers
- D. Fault Sets

Answer: C

Explanation:

The order of operations for a PowerFlex upgrade is strict and dictated by the software architecture.

* Metadata Managers (MDM): The MDM is the "brain" of the cluster. It holds the cluster map and configuration. It must be upgraded first (Primary, then Secondary, then Tie-Breakers) so that it can understand the newer protocol versions and manage the upgrade of the subsequent components. An older MDM cannot manage a newer SDS.

* Storage Data Servers (SDS): Once the MDMs are upgraded, the storage nodes are upgraded one by one (or fault set by fault set).

* Storage Data Clients (SDC): Finally, the host-side drivers are updated.

Therefore, A (Metadata Managers) is the correct first step. Fault Sets (C) are logical groups, not software components to be upgraded.

NEW QUESTION # 36
