Plat-Admn-301합격보장 가능 덤프 & Plat-Admn-301최신 시험기출문제

ExamPassdump는 유일하게 여러분이 원하는Salesforce인증Plat-Admn-301시험관련자료를 해결해드릴 수 있는 사이트 입니다. 여러분이 다른 사이트에서도 관련덤프자료를 보셨을경우 페이지 아래를 보면 자료출처는 당연히 ExamPassdump 일 것입니다. ExamPassdump의 자료만의 제일 전면적이고 또 최신 업데이트일 것입니다.

Salesforce Plat-Admn-301 시험요강:

주제	소개

주제 1	<ul style="list-style-type: none"> • Process Automation: This section of the exam measures skills of Salesforce Consultant and covers choosing the right automation tools to solve complex business problems. It focuses on understanding the capabilities and limitations of declarative tools, identifying the right troubleshooting methods, and applying automation correctly within Salesforce's order of execution. This section emphasizes designing efficient, scalable automation using workflow tools, flows, and other declarative features.
주제 2	<ul style="list-style-type: none"> • Environment Management and Deployment: This section of the exam measures skills of Salesforce Administrator and covers moving metadata between environments using tools such as sandboxes, change sets, and managed or unmanaged AppExchange packages. It explains the capabilities and best practices related to deploying changes through change sets to ensure smooth and controlled migrations.
주제 3	<ul style="list-style-type: none"> • Cloud Applications: This section of the exam measures skills of Salesforce Consultant and covers the standard Salesforce capabilities that support sales and service operations. It includes features such as products, price books, schedules, orders, quotes, and the tools that help with forecasting and territory management. The section also describes how to create Salesforce Knowledge articles, manage entitlements, support service workflows, and enable interactions through chat, case feed, Omni-Channel, console apps, and Experience Cloud sites. It also introduces the broader Salesforce suite that extends core platform functionality.
주제 4	<ul style="list-style-type: none"> • Security and Access: This section of the exam measures the skills of Salesforce Administrator and covers how record-level access, field access, and sharing models impact data visibility across the system. It focuses on understanding controlled-by-parent relationships, territory management, role hierarchies, and access to reports, dashboards, and email folders. It also includes comparing custom profiles, permission sets, and delegated administration, along with evaluating different authentication methods. The section also addresses the structure of business models such as person accounts, standard accounts, contacts, and contact-to-multiple-account relationships.
주제 5	<ul style="list-style-type: none"> • Auditing and Monitoring: This section of the exam measures skills of a Salesforce Support Specialist and covers the tools used to monitor system behavior and review user activity. It includes understanding debug logs, setup audit trail, and methods for ensuring sensitive data is handled correctly in both production and sandbox environments. It also explains how to review and troubleshoot security settings, including recognizing pending updates that might affect system access.

최신 Salesforce Administrator Plat-Admn-301 무료 샘플문제 (Q140-Q145):

질문 # 140

Cloud Kicks has created a new flow that deletes records.

What should the administrator consider when testing the flow?

- A. Even if the flow is inactive, debugging the flow will delete the test record.
- B. Flow with delete elements need to be inactivate to ensure that the test record is not actually deleted.
- C. Record deleted by Flow when debugging are hard deleted.
- D. Flows with delete elements cannot be debugged by the Flow debugged tool.

정답: A

설명:

Debugging a flow allows administrators to test how a flow behaves before activating it or making changes to it. Debugging a flow runs it in real time using test data provided by the administrator or default values from the flow. However, debugging a flow also performs any actions defined in the flow, such as creating, updating, or deleting records. Therefore, if a flow has a delete element that deletes a record based on certain criteria, debugging the flow will delete the test record even if the flow is inactive. References: https://help.salesforce.com/s/articleView?id=sf.flow_debug.htm&type=5

질문 # 141

Sales managers at Ursa Major Solar have asked for some additional automation around opportunity reminders. If the opportunity is in the Proposal stage a week before the close date, they want an email sent to the opportunity owner and manager. If the Budget

Approved custom field is checked, the managers want to be notified immediately.
How should these requirements be met without using code?

- A. Create a schedule-triggered flow. Configure the trigger to flow weekly.
- B. Create a schedule-triggered flow for the Opportunity object. Configure the trigger to flow daily.
- C. Create a record-triggered flow with scheduled paths. Configure the trigger to flow before the record is saved.
- **D. Create a record-triggered flow with scheduled paths. Configure the trigger to flow after the record is saved.**

정답: D

설명:

A record-triggered flow lets you automate actions when a record is created or updated. You can use scheduled paths to schedule actions relative to a date field on the record, such as close date. You should configure the trigger to flow after the record is saved so that you can access the updated field values. References:

https://help.salesforce.com/s/articleView?id=sf.flow_concepts_trigger_types_record.htm&type=5

질문 # 142

A sales manager at AW Computing has created a contact record but is missing some of the information to complete the record. The organization-wide default for Accounts is set to Public Read Only, and Contacts are controlled by parent.

- A. Who will be able to edit this new contact record?
- B. All users in the organization
- **C. Sales manager and system administrator**
- D. Users above the sales manager in the role hierarchy
- E. The owner and users below the owner in the role hierarchy

정답: C

설명:

The sales manager and system administrator will be able to edit this new contact record because they are either the owner or have Modify All Data permission respectively. Users above or below the sales manager in the role hierarchy will not be able to edit this contact record because contacts are controlled by parent and accounts are set to Public Read Only. All users in the organization will be able to view but not edit this contact record because accounts are set to Public Read Only. References:

https://help.salesforce.com/s/articleView?id=sf.admin_sharing.htm&type=5

질문 # 143

Cloud Kicks has been tracking how many participants wear the company's shoes in each marathon. The administrator creates two custom objects: Races and Runners. There is a master-detail relationship between them as well as a Roll-up Summary field on the Races object to show the count of runners in each race.

Requirements have changed, and the administrator wants to delete the Master-detail Relationship field without deleting the Runners records.

What action should an administrator take before the Relationship field can be deleted?

- **A. Change the field type to a Lookup Relationship.**
- B. Delete the Roll-up Summary field on the parent.
- C. Select the 'Allow Reparenting' checkbox on the Master-detail field.
- D. Uncheck 'Delete this record also' to turn off cascading deletes.

정답: A

설명:

Changing the field type to a Lookup Relationship will allow deleting the Relationship field without deleting the Runners records. A lookup relationship creates a loose association between two objects, where the child records do not depend on the parent records for their existence. A lookup relationship can be deleted without affecting the child records, unlike a master-detail relationship that enforces cascading deletes. References:
