## Realistic Latest Study ACD201 Questions - Find Shortcut to Pass ACD201 Exam

This format of Appian ACD201 exam preparation material is compatible with smartphones and tablets, providing you with the convenience and flexibility to study on the go, wherever you are. Our ACD201 PDF questions format is portable, allowing you to study anywhere, anytime, without worrying about internet connectivity issues or needing access to a desktop computer. Actual Appian ACD201 Questions in the Appian ACD201 PDF are printable, enabling you to study via hard copy.

## Appian Senior Developer Sample Questions (Q46-Q51):

### NEW QUESTION # 46

You're creating a process to update specific fields in a list of records and you save the updated records to the database.

You're given the following performance considerations:

Execution time

dumpsmaterials.com

appian

Process instance memory usage

dumpsmaterials.com

appian

Process execution engine load balancing

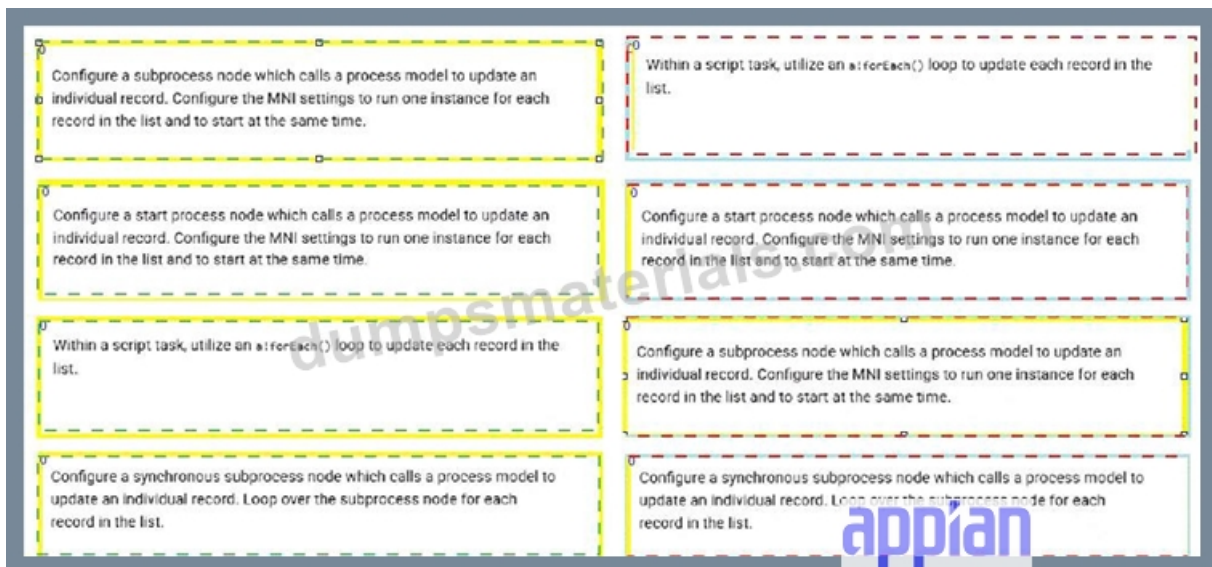

Based on these performance metrics, rank the options from best to worst.

Note: To answer, move all steps from the Options list to the Answer List area and arrange them in the correct ranking order (best at the top, and worst at the bottom).

0	<p>Configure a subprocess node which calls a process model to update an individual record. Configure the MNI settings to run one instance for each record in the list and to start at the same time.</p>	0	
0	<p>Configure a start process node which calls a process model to update an individual record. Configure the MNI settings to run one instance for each record in the list and to start at the same time.</p>	0	
0	<p>Within a script task, utilize an <code>forEach()</code> loop to update each record in the list.</p>	0	
0	<p>Configure a synchronous subprocess node which calls a process model to update an individual record. Loop over the subprocess node for each record in the list.</p>	0	

**Answer:**

**Explanation:**

Explanation:

Configure a subprocess node which calls a process model to update an individual record. Configure the MNI settings to run one instance for each record in the list and to start at the same time.	Within a script task, utilize an a!forEach() loop to update each record in the list.
Configure a start process node which calls a process model to update an individual record. Configure the MNI settings to run one instance for each record in the list and to start at the same time.	Configure a start process node which calls a process model to update an individual record. Configure the MNI settings to run one instance for each record in the list and to start at the same time.
Within a script task, utilize an a!forEach() loop to update each record in the list.	Configure a subprocess node which calls a process model to update an individual record. Configure the MNI settings to run one instance for each record in the list and to start at the same time.
Configure a synchronous subprocess node which calls a process model to update an individual record. Loop over the subprocess node for each record in the list.	Configure a synchronous subprocess node which calls a process model to update an individual record. Loop over the subprocess node for each record in the list.

#### NEW QUESTION # 47

Which two items are configured in the Admin Console when you create a web API? (Choose two.)

- A. Service Account
- B. Access Control Policies
- C. LDAP Authentication
- D. API Key

Answer: A,D

Explanation:

API Keys are configured in the Admin Console to control and secure access to web APIs.

Service Accounts are managed in the Admin Console to allow external systems to authenticate and call the web APIs.

#### NEW QUESTION # 48

You need to create a web API so that an external system can start a process in your app.

Which two statements are true about using a service account to authenticate the system? (Choose two.)

- A. The service account must be a user in the Service Accounts group.

- B. The service account must be granted access to that web API via group management.
- C. The service account is created as any other object in Appian.
- D. The service account must be configured from within the web API object.

**Answer: A,B**

Explanation:

The service account must be granted access to the web API, typically via group management, to allow authenticated calls.

The service account must be a user in the Service Accounts group to be used for authentication in integrations such as web APIs.

#### NEW QUESTION # 49

Your client wants to configure user authentication using single sign-on (SSO) in their cloud environment.

Which two authentication types should you use to support this requirement? (Choose two.)

- A. OpenID Connect authentication
- B. Appian authentication
- C. PIEE user authentication
- D. LDAP authentication

**Answer: A,B**

Explanation:

OpenID Connect authentication supports single sign-on (SSO) by integrating with external identity providers.

Appian authentication can work in conjunction with SSO configurations as part of a hybrid setup or fallback mechanism.

#### NEW QUESTION # 50

What are two advantages of database normalization? (Choose two.)

- A. Minimizing data redundancy.
- B. Simplifying query statements to read data.
- C. Enforcing data integrity.
- D. Minimizing the number of tables that need to be created.

**Answer: A,C**

Explanation:

Database normalization enforces data integrity by structuring data and relationships to prevent anomalies.

It minimizes data redundancy by ensuring each piece of information is stored only once, reducing duplication.

#### NEW QUESTION # 51

.....

We promise that using ACD201 certification training materials of DumpsMaterials, you will pass ACD201 exam in your first try. If not or any problems in ACD201 certification training materials, we will refund fully. What's more, after you purchase our ACD201 Certification Training materials, DumpsMaterials will offer update service in one year.
