CheckPoint 156-315.81 Test Quiz & 156-315.81 Original Questions

In order to adapt to different level differences in users, the 156-315.81 exam questions at the time of writing teaching materials with a special focus on the text information expression, as little as possible the use of crude esoteric jargon, as much as possible by everyone can understand popular words to express some seem esoteric knowledge, so that more users through the 156-315.81 Prep Guide to know that the main content of qualification examination, stimulate the learning enthusiasm of the user, arouse their interest in learning.

CheckPoint Check Point Certified Security Expert R81 Sample Questions (Q442-Q447):

NEW QUESTION # 442

Fill in the blank: An Endpoint identity agent uses a _____ for user authentication.

- A. Shared secret
- **B. Username/password or Kerberos Ticket**
- C. Token
- D. Certificate

Answer: B

Explanation:

An Endpoint Identity Agent is a software component that runs on the user's device and communicates with the Check Point gateway to provide user identity information. An Endpoint Identity Agent can use different methods for user authentication, such as username/password, Kerberos ticket, or certificate. However, the most common and recommended method is username/password or Kerberos ticket, which allows the user to log in to the device with their domain credentials and automatically authenticate with the gateway without entering additional credentials. This method also supports Single Sign-On (SSO) and Multi-Factor Authentication (MFA) features.

NEW QUESTION # 443

By default, which port does the WebUI listen on?

- A. 0
- B. 1
- C. 2
- **D. 3**

Answer: D

Explanation:

The default port for the Gaia WebUI Portal is HTTPS 443. This is the standard port for secure web communication over SSL/TLS. Changing the port may cause inconsistency with the settings on the SmartConsole and is not recommended unless necessary. To change the port, you can use the CLISH command `set web ssl-port <port number>` and save the configuration. References: 13

NEW QUESTION # 444

Access roles allow the firewall administrator to configure network access according to:

- A. remote access clients.
- B. a combination of computer or computer groups and networks.
- **C. All of the above.**
- D. users and user groups.

Answer: C

Explanation:

Access roles are objects that define a set of users, machines, or networks that can access a specific network resource. You can create access roles based on any combination of the following criteria:

Users and user groups: You can use users and user groups from various sources, such as LDAP, RADIUS, local database, etc.

Computers or computer groups: You can use computers or computer groups that are identified by their IP address, MAC address, or hostname.

Networks: You can use networks that are defined by their IP address range, subnet mask, or gateway.

You can use access roles in the Source or Destination column of an Access Control rule to allow or deny network access based on the identity of the users, machines, or networks.

NEW QUESTION # 445

What is the main difference between Threat Extraction and Threat Emulation?

- A. Threat Emulation never delivers a file and takes more than 3 minutes to complete.
- B. Threat Emulation never delivers a file that takes less than a second to complete.
- **C. Threat Extraction always delivers a file and takes less than a second to complete.**
- D. Threat Extraction never delivers a file and takes more than 3 minutes to complete.

Answer: C

Explanation:

Threat Extraction (Answer B): Threat Extraction always delivers a file, but it removes potentially malicious content from the file before delivering it to the user. It is designed to provide a safe version of the file quickly, taking less than a second to complete.

Threat Emulation (Option A): Threat Emulation does not deliver the original file to the user until it has been thoroughly analyzed for threats. It may take more than 3 minutes to complete the analysis. The emphasis here is on safety and thorough inspection, which may result in a longer processing time.

Therefore, Option B correctly describes the main difference between Threat Extraction and Threat Emulation.

NEW QUESTION # 446

While using the Gaia CLI, what is the correct command to publish changes to the management server?

- **A. mgmt publish**
- B. json publish
- C. mgmt_cli commit
- D. commit

Answer: A

Explanation:

Explanation

While using the Gaia CLI, the correct command to publish changes to the management server is mgmt publish.

This command publishes all changes made by all administrators since the last publish operation. The json publish command is not valid in Gaia CLI. The mgmt_cli commit command is used to publish changes made by a specific administrator session. The commit command is used to save configuration changes in Gaia CLI.

References: Publishing Changes

NEW QUESTION # 447

.....

If you do not quickly begin to improve your own strength, the next one facing the unemployment crisis is you. The time is very tight, and choosing our 156-315.81 study materials can save you a lot of time. And our 156-315.81 Exam Questions can really save you time and efforts. If you study with our 156-315.81 learning guide for 20 to 30 hours, then you will be able to pass the exam and get the certification.
