## Free PDF International Code Council First-grade Fire-Inspector-II - Valid 67 - Fire Inspector II Exam Exam Prep

This format of our Fire-Inspector-II product is easiest to use due to its compatibility with web-browsers. This handy feature makes it your go-to online platform to evaluate your preparation. Conceptual and tough Fire-Inspector-II questions will prompt on your screen which will test your true concepts. International Code Council Certification Exams Questions taken from past papers will also be given to give you a brief idea of the actual difficulty level of the 67 - Fire Inspector II Exam (Fire-Inspector-II) exam. Its large question bank prepares you to ace your exam with ease and it will also help you to pinpoint your mistakes and weaknesses and work on them.

## International Code Council 67 - Fire Inspector II Exam Sample Questions

## (Q34-Q39):

### NEW QUESTION # 34

Paint spray booths must have a clearance of \_\_\_ in. from unprotected combustible materials.

- A. 0
- B. 1
- C. 2
- **D. 3**

**Answer: D**

Explanation:

Paint Spray Booth Clearance Requirements

According to the International Fire Code (IFC) 2021, Section 2404.3.2, paint spray booths must have a minimum clearance of 18 inches from unprotected combustible materials.

This clearance requirement helps prevent heat transfer, fire spread, and ignition of nearby combustible materials due to the operation of the spray booth.

2. Why 18 Inches is the Correct Answer

Spray booths generate overspray, vapors, and heat, making clearance essential for fire prevention.

The requirement applies to combustible walls, ceilings, and storage materials surrounding the spray booth.

If combustibles are within 18 inches, additional fire protection such as fire-rated barriers or sprinkler protection may be required.

3. Verification of Other Options

Option A (12 inches) - Incorrect, as the IFC mandates a minimum 18-inch clearance.

Option C (24 inches) - Exceeds the standard clearance requirement but is not the official minimum. Incorrect.

Option D (36 inches) - Some jurisdictions may require larger clearances, but IFC mandates 18 inches as the minimum. Incorrect.

Reference Sources:

International Fire Code (IFC) 2021 - Section 2404.3.2 (Paint Spray Booth Clearance Requirements) NFPA 33: Standard for Spray Application Using Flammable or Combustible Materials (Clearance Guidelines) ICC Fire Inspector II Study Guide (2021)

Thus, the correct and verified answer is: B. 18 inches

### NEW QUESTION # 35

A building under construction which has two stairways shall have a minimum of how many fire extinguishers per floor?

- A. 0
- B. 1
- C. 2
- **D. 3**

**Answer: D**

Explanation:

Reference to Fire Extinguisher Requirements in Buildings Under Construction:

NFPA 241 (Standard for Safeguarding Construction, Alteration, and Demolition Operations) Section 13.6.1 and IFC 3309.1 require that:

A minimum of one fire extinguisher per floor is required.

Additional extinguishers are required based on stairwells and floor area.

If a building under construction has two stairways, a minimum of two fire extinguishers must be provided per floor to ensure adequate fire protection coverage.

Fire Safety Considerations for Construction Sites:

Construction sites pose a high fire risk due to temporary electrical systems, combustible materials, and lack of finished fire suppression systems.

Fire extinguishers must be readily available and evenly distributed near exit stairways and pathways for rapid access in case of an emergency.

Clarification of Incorrect Answer Choices:

A: 1 # Incorrect

One extinguisher is the minimum required for floors with only one exit/stairway, but a building with two stairways requires at least two extinguishers.

C: 3 # Incorrect

While more extinguishers can be added for larger areas or high-risk work zones, the minimum requirement remains two for two

stairwells.

D: 4 # Incorrect

There is no general requirement for four extinguishers per floor unless dictated by floor size and hazard level.

Conclusion:

The correct and verified answer is B (2 fire extinguishers per floor) based on NFPA 241 and IFC 3309.1, ensuring compliance with fire safety standards for buildings under construction.

### NEW QUESTION # 36

What is the maximum travel distance to an exit from within a tent?

- A. 75 ft.
- **B. 150 ft.**
- C. 100 ft.
- D. Any distance approved by the chief

**Answer: B**

Explanation:

The maximum travel distance to an exit from within a tent is regulated under the 2021 International Fire Code (IFC), Section 3103.12.2 - Means of Egress (Tents and Membrane Structures).

IFC Section 3103.12.2 - Travel Distance:

"The maximum travel distance to an exit shall not exceed 150 feet (45,720 mm)." Why Other Options Are Incorrect?

A). 75 ft. - This limit does not apply to tents; the correct limit is 150 ft.

B). 100 ft. - Too restrictive; the IFC allows up to 150 ft.

D). Any distance approved by the chief. - The fire code does not allow unlimited travel distances; 150 feet is the maximum permitted by code.

# Correct answer: C. 150 ft.

### NEW QUESTION # 37

The minimum fire-flow for a 3,700-sq. ft. two-family dwelling of Type VB construction with a sprinkler system is \_\_\_ GPM.

- **A. 1,000**
- B. 1,750
- C. 0
- D. 1,313

**Answer: A**

Explanation:

Fire flow for residential buildings is determined based on IFC Appendix B, Table B105.1(1) - Required Fire Flow for One- and Two-Family Dwellings, Group R-3, and R-4 Buildings.

For a 3,700 sq. ft. two-family dwelling of Type VB construction:

Per Table B105.1(1), the baseline fire flow is 1,750 gpm.

If an NFPA 13D-compliant automatic sprinkler system is installed, the fire flow is reduced by 50%.

$1,750 \text{ gpm} \times 0.50 = 875 \text{ gpm}$ , but the minimum allowed for a sprinklered dwelling is 1,000 gpm.

# Correct answer: B. 1,000 gpm

### NEW QUESTION # 38

The minimum fire-flow for a 3,700-sq. ft. two-family dwelling of Type VB construction with a sprinkler system is \_\_\_ GPM.

- **A. 1,000**
- B. 1,750
- C. 0
- D. 1,313

**Answer: A**

Explanation:

Fire flow for residential buildings is determined based on IFC Appendix B, Table B105.1(1) - Required Fire Flow for One- and Two-Family Dwellings, Group R-3, and R-4 Buildings.

For a 3,700 sq. ft. two-family dwelling of Type VB construction:

Per Table B105.1(1), the baseline fire flow is 1,750 gpm.

If an NFPA 13D-compliant automatic sprinkler system is installed, the fire flow is reduced by 50%.

$1,750 \text{ gpm} \times 0.50 = 875 \text{ gpm}$ , but the minimum allowed for a sprinklered dwelling is 1,000 gpm.

## NEW QUESTION # 39

.....

In order to facilitate the wide variety of users' needs the Fire-Inspector-II study guide have developed three models with the highest application rate in the present - PDF, software and online. Online mode of another name is App of Fire-Inspector-II study materials, it is developed on the basis of a web browser, as long as the user terminals on the browser, can realize the application which has applied by the Fire-Inspector-II simulating materials of this learning model, such as computer, phone, laptop and so on.
