有効的なMuleSoft-Integration-Associateテスト参考書一回合格-ハイパス レートのMuleSoft-Integration-Associate資格関連題

SalesforceのMuleSoft-Integration-Associateの認定試験に受かることはIT業種に従事している皆さんの夢です。あなたは夢を実現したいのなら、プロなトレーニングを選んだらいいです。Fast2testは専門的にIT認証トレーニング資料を提供するサイトです。Fast2testはあなたのそばにいてさしあげて、あなたの成功を保障します。あなたの目標はどんなに高くても、Fast2testはその目標を現実にすることができます。

Salesforce Certified MuleSoft Integration Associate Exam 認定 MuleSoft-Integration-Associate 試験問題 (Q27-Q32):

質問 # 27

During a planning session with the executive leadership, the development team director presents plans for a new API to expose the data in the company's order database. An earlier effort to build an API on top of this data failed, so the director is recommending a design-first approach.

Which characteristics of a design-first approach will help make this API successful?

- A. Adding global policies to the API so all developers automatically secure the implementation before coding anything
- B. Building MUnit tests so administrators can confirm code coverage percentage during deployment
- C. Publishing the fully implemented API to Exchange so all developers can reuse the API
- **D. Developing a specification so consumers can test before the implementation is built**

正解: D

解説:

A design-first approach emphasizes creating the API specification before implementation, ensuring better alignment with consumer needs and reducing the risk of project failure. Here's a detailed explanation:

* API Specification:

* Definition: An API specification is a detailed, formal description of the API's endpoints, request/response formats, and protocols.

* Consumer Testing: Allows API consumers (developers) to understand, test, and provide feedback on the API design before actual development begins.

* Advantages:

* Early Feedback: Consumers can test the API design using mock services or tools like API Designer and provide feedback, ensuring the API meets their requirements.

* Reduced Rework: Identifies potential issues and design flaws early, reducing costly changes during the implementation phase.

* Documentation: Provides comprehensive documentation that aids in the development and future maintenance of the API.

* API Mocking: API Designer Mocking Service

質問 # 28

An integration team follows MuleSoft's recommended approach to full lifecycle API development. Which activity should this team perform during the API implementation phase?

- A. Use the API specification to monitor the MuleSoft application
- B. Design the API specification
- **C. Use the API specification to build the MuleSoft application**
- D. Validate the API specification

正解: C

解説:

MuleSoft recommends a full lifecycle API development approach which includes several phases such as design, implementation, testing, deployment, and management. During the API implementation phase, the primary activity is to use the API specification to build the MuleSoft application. Here's a detailed explanation:

* API Design:

* Create API Specification: Initially, an API specification is created using RAML or OAS (OpenAPI Specification) to define the API's structure, endpoints, request/response formats, and security requirements.

* API Implementation:

* Build Mule Application: Using the API specification as a blueprint, the development team implements the MuleSoft application. This involves creating flows, integrating with backend systems, and ensuring the API functions as specified.

* APIKit: MuleSoft provides APIKit, a tool that automatically generates Mule flows based on the API specification, speeding up the development process.

* Testing: During implementation, unit tests (using MUnit) and integration tests are created to ensure the API behaves as expected.

* Validation and Monitoring:

* Validate Against Specification: Throughout the implementation phase, the API is continuously validated against the original specification to ensure compliance.

* Deployment and Monitoring: Post-implementation, the API is deployed, and tools like Anypoint Monitoring are used to monitor its performance and usage.

* MuleSoft Documentation: Full Lifecycle API Management

* APIKit: Building APIs with APIKit

質問 # 29

What are two reasons why a typical MuleSoft customer favors a MuleSoft-hosted AnypointPlatform runtime plane over a customer-hosted runtime for its Mule application deployments? (Choose two.)

- A. Reduced time-to-market for the first application
- B. Reduced application latency
- C. Reduced IT operations effort
- D. increased application isolation
- E. Increased application throughput

正解: A、C

解説:

Choosing a MuleSoft-hosted Anypoint Platform runtime plane offers several advantages, particularly in terms of deployment efficiency and operational management. Here's a detailed explanation of the selected reasons:

* Reduced Time-to-Market for the First Application:

* Pre-Configured Environment: MuleSoft-hosted Anypoint Platform provides a ready-to-use environment, which accelerates the deployment process.

* Ease of Use: Developers can quickly set up and deploy applications without the need for extensive infrastructure setup and configuration.

* Reduced IT Operations Effort:

* Managed Services: MuleSoft handles the infrastructure management, including updates, scaling, and maintenance, reducing the operational burden on the IT team.

* Focus on Development: IT teams can focus on developing and optimizing applications rather than managing runtime environments.

質問 # 30

An organization needs to procure an enterprise software system to increase cross-selling opportunities and better track prospect data.

Which category of enterprise software has these core capabilities, when used for its typical and intended purpose?

- A. IT Service Management (ITSM)
- B. Business-to-Business (B2B)
- C. Supply Chain Management (SCM)
- D. Customer Relationship Management (CRM)

正解: D

解説:

Customer Relationship Management (CRM) systems are designed to manage an organization's interactions with current and potential customers. Here's a detailed explanation:

* Core Capabilities:

* Cross-Selling Opportunities: CRM systems track customer interactions, preferences, and purchasing history, helping businesses identify opportunities for cross-selling and upselling.

* Prospect Data Management: CRM systems manage prospect information, track leads, and nurture relationships through the sales funnel.

* Typical Use:

* Sales Management: Helps sales teams manage and analyze customer interactions and data throughout the customer lifecycle.

* Marketing Automation: Assists in automating marketing campaigns, segmenting customer lists, and tracking campaign effectiveness.

* Customer Service: Provides tools for managing customer support cases, improving customer

* satisfaction, and retaining customers.

質問 # 31

An API client makes an HTTP request to an API gateway with an Accept header containing the value "application/json"

What is a valid HTTP response payload for this request in the client's requested data format?

- A. status('healthy')
- B. status: healthy
- C. {"status": "healthy"}
- D. <status>healthy< 'status'>

正解: C

解説:

When an API client makes an HTTP request with an Accept header containing the value "application/json", the API server should respond with a payload formatted as JSON. Here's a detailed explanation:

* Accept Header:

* Purpose: The Accept header indicates the media type(s) that the client is willing to receive from the server.

* Value "application/json": Specifies that the client expects a response in JSON format.

* Valid JSON Response:

* Format: JSON (JavaScript Object Notation) is a lightweight data interchange format that uses key-value pairs.

* Example: A valid JSON response for the requested format would be {"status": "healthy"}.

* Key: "status"

* Value: "healthy"
