Cisco Certified Support Technician (CCST) Cybersecurity Sample Questions (Q180-Q185):

NEW QUESTION # 180

You need to manage security risks at your company. In which order should you complete the actions?
Move all the actions to the answer area and place them in the correct order.

Answer:

Explanation:

NEW QUESTION # 181

Which of the following is an example of personally identifiable information (PII)?

- A. Employee ID number
- **B. Birthdate**
- C. Browser history
- D. IP address

Answer: B

Explanation:

Personally identifiable information (PII) refers to any data that can be used to identify an individual.

Birthdate is considered PII as it can be used to pinpoint a specific person.

NEW QUESTION # 182

Which security measure can prevent unauthorized devices from automatically connecting to a corporate network through unused switch ports?

- A. VLAN trunking
- **B. Port security**
- C. VPN
- D. NAT

Answer: B

Explanation:

The CCST Cybersecurity Study Guide explains that port security on switches can be configured to limit the number of MAC addresses allowed on a port, or to restrict it to specific devices.

"Port security can prevent unauthorized access by limiting or specifying the MAC addresses allowed to connect through a given switch port. This mitigates risks from rogue devices connecting to the network." (CCST Cybersecurity, Basic Network Security Concepts, Switch Security section, Cisco Networking Academy)

NEW QUESTION # 183

Which of the following tools is primarily used for analyzing network packets?

- A. Norton Antivirus
- B. Oracle Database
- **C. Wireshark**
- D. Cisco AnyConnect

Answer: C

Explanation:

Wireshark is a popular open-source tool used for network packet analysis and protocol troubleshooting. It allows users to capture, examine, and analyze network packets in real-time. Wireshark provides detailed information about the different protocols, traffic patterns, and network anomalies, assisting cybersecurity professionals in diagnosing network issues, identifying security vulnerabilities, and detecting potential attacks.

NEW QUESTION # 184

Which security feature provides network segmentation by creating virtual networks?

- A. Intrusion Prevention System (IPS)
- **B. VLANs**
- C. Virtual Private Network (VPN)
- D. VLANs

Answer: B

Explanation:

Option 1: Correct, VLANs (Virtual Local Area Networks) provide network segmentation by creating virtual networks, allowing different groups of devices to be logically separated on the same physical network.

Option 2: Incorrect, Firewalls are designed to monitor and filter network traffic based on predetermined security rules, but they do not provide network segmentation by creating virtual networks.

Option 3: Incorrect, An Intrusion Prevention System (IPS) is a security appliance or software that monitors network traffic for suspicious activity and takes action to prevent potential threats, but it does not provide network segmentation by creating virtual networks.

Option 4: Incorrect, A Virtual Private Network (VPN) is a secure tunnel between two or more devices, typically used to connect remote sites or allow remote users to access the private network. It does not provide network segmentation by creating virtual networks.

NEW QUESTION # 185
