Which protocol does FortiGate use for secure management access by default?

- A. Telnet
- B. SNMP
- C. HTTP
- D. **SSH**

**Answer: D**

Explanation:

FortiGate uses SSH (Secure Shell) by default for secure management access, providing encrypted command-line access. Telnet (A)

and HTTP (C) are insecure, and SNMP (D) is for monitoring, not management. Exact extract: "FortiGate enables SSH by default for secure management access, providing encrypted CLI access to administrators."

### NEW QUESTION # 33

Which FortiGate feature supports load balancing across multiple WAN links?

- A. Link Aggregation
- B. Virtual Routing
- C. SD-WAN
- D. Multi-Path Routing

**Answer: C**

Explanation:

FortiGate's SD-WAN feature enables load balancing and intelligent traffic steering across multiple WAN links based on criteria like bandwidth, latency, or application. Link Aggregation (B) bonds interfaces, Virtual Routing (C) is VRF, and Multi-Path Routing (D) is not a standard term. Exact extract: "SD-WAN enables load balancing and traffic steering across multiple WAN links, optimizing performance and reliability based on configured rules and metrics."

### NEW QUESTION # 34

Which protocol is used by FortiGate to synchronize session tables in an HA cluster?

- A. VRRP
- B. OSPF
- C. BGP
- D. FGCP

**Answer: D**

Explanation:

The FortiGate Cluster Protocol (FGCP) is used to synchronize session tables, configuration, and state information between HA cluster members to ensure seamless failover. VRRP (B) is for router redundancy, OSPF (C) and BGP (D) are routing protocols, not used for HA synchronization. Exact extract: "FGCP synchronizes session tables, configurations, and state information between FortiGate HA cluster members to ensure continuity during failover."

### NEW QUESTION # 35

In a FortiGate high availability (HA) cluster, what happens if the primary unit fails?

- A. A secondary unit takes over as the primary unit
- B. The cluster switches to active-passive mode
- C. The cluster is disabled, and traffic stops
- D. Traffic is rerouted through an external gateway

**Answer: A**

Explanation:

In a FortiGate HA cluster (active-active or active-passive), if the primary unit fails, a secondary unit automatically takes over as the primary, ensuring continuity of traffic with minimal disruption. Option A is incorrect as traffic continues, C is incorrect as the mode doesn't change post-failure, and D is unrelated. Exact extract: "In a FortiGate HA cluster, if the primary unit fails, a secondary unit is elected as the new primary, taking over all roles to maintain traffic flow and session continuity."

### NEW QUESTION # 36

Hybrid cloud means that

- A. Cloud provider provides both 32-bit and 64-bit virtual machines
- B. One customer uses VMs with multiple different operating systems in the same cloud account

- C. The cloud provider uses AMD, Intel and possibly also other CPU vendors
- D. Some of the customer's systems are virtualized in the public cloud and some are in the local datacenter

**Answer: D**

Explanation:

A hybrid cloud combines on-premises infrastructure (local datacenter) with public cloud resources, allowing workloads to operate across both environments for flexibility and scalability. Fortinet solutions like FortiGate- VM support hybrid cloud deployments. Option A refers to hardware diversity, C to OS variety, and D to architecture types, none of which define hybrid cloud. Exact extract: "Hybrid cloud is the combination of public cloud services with an on-premises private cloud or datacenter... This allows customers to run some systems in the public cloud and others in their local datacenter, managed seamlessly."
