Get Useful EMEA-Advanced-Support Exam Registration and Pass Exam in First Attempt

We aim to leave no misgivings to our customers so that they are able to devote themselves fully to their studies on EMEA-Advanced-Support guide materials and they will find no distraction from us. I suggest that you strike while the iron is hot since time waits for no one. With our EMEA-Advanced-Support Exam Questions, you will be bound to pass the exam with the least time and effort for its high quality. With our EMEA-Advanced-Support study guide for 20 to 30 hours, you will be ready to take part in the exam and pass it with ease.

Fortinet EMEA Advanced Support Exam Sample Questions (Q15-Q20):

NEW QUESTION # 15

A firewall receives an out-of-order packet in a TCP session after the FIN/ACK and the packet is dropped as expected. What parameter can be changed to prevent such drops?

- A. Enable TCP option
- B. TCPMSS
- C. TCP time-wait timer
- D. TCP close-wait timer

Answer: C

Explanation:
Out-of-order packets after FIN/ACK indicate a packet arriving in the TIME_WAIT state, where the session is closing. The TCP time-wait timer controls how long the firewall keeps the session in the TIME_WAIT state to handle late packets. Increasing this timer allows the firewall to accept such packets instead of dropping them. Close-wait timer relates to a different state, TCPMSS affects packet size, and "Enable TCP option" is not a standard parameter. Exact extract: "The TCP time-wait timer determines how long a session remains in the TIME_WAIT state to handle out-of-order or retransmitted packets after FIN/ACK... Adjusting this timer can prevent drops of late-arriving packets."

NEW QUESTION # 16
Which parts of the IKE protocol below are responsible for authenticating the User (username/password) of a dialup IPsec tunnel? (Check all correct answers)

- A. IKEv1 Xauth
- B. IKEv2 EAP
- C. IKEv1 phase2
- D. IKEv2 SA_INIT
- E. IKEv1 phase1

Answer: A,B

Explanation:
For user authentication in dialup IPsec, IKEv1 uses XAuth (Extended Authentication) after Phase 1 for username/password. IKEv2 uses EAP (Extensible Authentication Protocol) for similar user auth. Phase 1 and SA_INIT are for peer auth, Phase 2 for child SA negotiation. Exact extract: XAuth increases security by requiring remote dialup client users to authenticate in a separate exchange at the end of phase 1. IPsec IKEv2 VPNs now support certificate authentication and EAP authentication at the same time from a dialup FortiClient. With the eap-cert-auth setting ... IPsec IKEv2 VPNs now support certificate authentication and EAP authentication at the same time from a dialup FortiClient. IPsec IKEv1 uses XAUTH for user authentication, and IPsec IKEv2 uses EAP for user authentication. Only EAP-TTLS is interoperable with LDAP. For LDAP based user ... In your scenario, the user cannot authenticate by providing both a PSK and their credentials (using one of multiple EAP methods).

NEW QUESTION # 17
Which protocol is used by FortiGate to synchronize session tables in an HA cluster?

- A. FGCP
- B. OSPF
- C. BGP
- D. VRRP

Answer: A

Explanation:
The FortiGate Cluster Protocol (FGCP) is used to synchronize session tables, configuration, and state information between HA cluster members to ensure seamless failover. VRRP (B) is for router redundancy, OSPF (C) and BGP (D) are routing protocols, not used for HA synchronization. Exact extract: "FGCP synchronizes session tables, configurations, and state information between FortiGate HA cluster members to ensure continuity during failover."

NEW QUESTION # 18
What is the role of the FortiGate 'set srcintf' command in a firewall policy?

- A. Specifies the source interface for traffic matching
- B. Sets the source IP address range
- C. Configures the source NAT interface
- D. Defines the destination interface for traffic

Answer: A

Explanation:

The 'set srcintf' command in a FortiGate firewall policy specifies the source interface from which traffic originates, helping define the policy's scope. It does not set the destination interface (B), source IP range (C), or NAT interface (D). Exact extract: "The 'set srcintf' command in a firewall policy specifies the source interface for incoming traffic, allowing FortiGate to match packets based on their entry interface."

NEW QUESTION # 19

Which protocol does FortiGate use for secure management access by default?

- A. SNMP
- B. HTTP
- C. Telnet
- D. SSH

Answer: D

Explanation:

FortiGate uses SSH (Secure Shell) by default for secure management access, providing encrypted command- line access. Telnet (A) and HTTP (C) are insecure, and SNMP (D) is for monitoring, not management. Exact extract: "FortiGate enables SSH by default for secure management access, providing encrypted CLI access to administrators."

NEW QUESTION # 20

......

Eliminates confusion while taking the Fortinet EMEA Advanced Support Exam exam. Prepares you for the format of your EMEA-Advanced-Support exam dumps, including multiple-choice questions and fill-in-the-blank answers. Comprehensive, up-to-date coverage of the entire EMEA-Advanced-Support curriculum. EMEA-Advanced-Support practice questions are based on recently released EMEA-Advanced-Support Exam Objectives. Includes a user-friendly interface allowing you to take the EMEA-Advanced-Support practice exam on your computers, like downloading the PDF, Web-Based EMEA-Advanced-Support practice test PracticeTorrent, and Desktop EMEA-Advanced-Support practice exam.
