A lot of our candidates used up all examination time and leave a lot of unanswered questions of the 300-420 exam questions. It is a bad habit. In your real exam, you must answer all questions in limited time. So you need our timer to help you on 300-420 Practice Guide. Our timer is placed on the upper right of the page. The countdown time will run until it is time to submit your exercises of the 300-420 study materials. Also, it will remind you when the time is soon running out.

Cisco 300-420 Exam is a crucial certification exam for network engineers, architects, and designers who are responsible for designing and implementing complex enterprise networks. Designing Cisco Enterprise Networks certification validates your skills and knowledge in enterprise network design principles and best practices, as well as your expertise in advanced routing and switching technologies, network security, wireless technologies, and network automation.

>> New 300-420 Exam Question <<

## 100% Pass Quiz Useful 300-420 - New Designing Cisco Enterprise Networks Exam Question

In order to save a lot of unnecessary trouble to users, we have completed our Designing Cisco Enterprise Networks study questions research and development of online learning platform, users do not need to download and install, only need your digital devices have a browser, can be done online operation of the 300-420 test guide. This kind of learning method is very convenient for the user, especially in the time of our fast pace to get Cisco certification. In addition, our test data is completely free of user's computer memory, will only consume a small amount of running memory when the user is using our product. At the same time, as long as the user ensures that the network is stable when using our 300-420 Training Materials, all the operations of the learning material of can be applied perfectly.

## Read the topics of the Cisco 300-420 Exam

Candidates must know the topics before they start of preparation. Because it will really help them in hitting the core. Our **Cisco 300-420 exam dumps** will include the following topics:

- Network Services 20%
- Automation 10%
- Advanced Enterprise Campus Networks 25%
- Advanced Addressing and Routing Solutions 25%
- WAN for Enterprise Networks 20%

## Cisco Designing Cisco Enterprise Networks Sample Questions (Q270-Q275):

### NEW QUESTION # 270

An engineer must peer with an ISP for internet connectivity using BGP, initially, the engineer wants to receive only specific prefixes

from the ISP and a default route. However, the solution must provide the flexibility to add prefixes in the future at short notice. The ISP has a two-week change process in place. Which route filtering solution must the engineer employ?

- A. Configure outbound route filtering on the enterprise and ISP so that the enterprise tell the ISP which prefixes are required
- B. Request a limited internet routing table and a default route from the ISP and configure the BGP max-limit to 1 with an access list that permits only the specific internet prefixes and blocked networks
- C. Request a full internet routing table and a default route from the ISP and configure inbound route filtering with a prefix list that permits the default route and required prefixes
- D. Request only the required prefixes and default route be advertised from the ISO with whitelisted networks

**Answer: C**

Explanation:

Explanation

anychange on the prefix list, engineer only need to update the prefix list and restart the BGP peer to the ISP.

soft-reconfiguration inbound could be used to reduce down time of reset BGP peer, but it require lots of memory and in this case, connection to ISP and tons of route learnt will not be apporitated.

### NEW QUESTION # 271

Drag and drop the properties from the left onto the protocols they describe on the right.

HTTPS-based	NETCONF
SSH-based	
built to support candidate configuration	
lacks support for two-phase commit transactions	RESTCONF

**Answer:**

Explanation:

HTTPS-based	NETCONF
SSH-based	SSH-based
built to support candidate configuration	built to support candidate configuration
lacks support for two-phase commit transactions	RESTCONF
	HTTPS-based
	lacks support for two-phase commit transactions

Explanation:

NETCONF: SSH-based; built to support candidate configuration. RESTCONF: HTTPS-based; lacks support for two-phase commit transactions.

NETCONF and RESTCONF both use YANG data models, but they use different transport and transaction behaviors.

NETCONF is traditionally SSH-based and was designed as a network configuration protocol with datastore concepts such as running, startup, and candidate configuration where supported. The candidate datastore enables staged configuration changes and a commit workflow, which is useful for transactional network changes. RESTCONF exposes YANG-modeled resources through an

HTTP-based REST interface, typically protected with HTTPS. It is simpler for web-style application integration because it uses familiar HTTP methods, URIs, and payload encodings such as XML or JSON. However, RESTCONF does not provide the same full two-phase commit transaction model associated with NETCONF candidate configuration workflows. Therefore, the correct mapping is that NETCONF is SSH-based and built to support candidate configuration, while RESTCONF is HTTPS-based and lacks support for two-phase commit transactions. In Cisco programmability design, NETCONF is often selected for robust configuration transactions, whereas RESTCONF is often selected for simpler API-driven integration.

#### NEW QUESTION # 272

Which consideration must be made when designing a Cisco SD-Access fabric underlay?

- A. The default MTU should be increased.
- B. Up to six control planes are supported.
- C. A unified policy must be used.
- D. Subnets must be reduced to decrease latency.

**Answer: A**

Explanation:

Look under "Underlay Network Design". Its the second bullet point.

[https://www.cisco.com/c/en/us/td/docs/solutions/CVD/Campus/cisco-sda-design-guide.html#Underlay\\_Network\\_Design](https://www.cisco.com/c/en/us/td/docs/solutions/CVD/Campus/cisco-sda-design-guide.html#Underlay_Network_Design)

#### NEW QUESTION # 273

Which AES mode should be used in a Cisco SD-WAN environment that includes multicast applications?

- A. Cipher Block Chaining (CBC)
- B. Cipher Feedback (CFB)
- C. Electronic Code Book (ECB)
- D. Galois/Counter Mode (GCM)

**Answer: D**

#### NEW QUESTION # 274

A customer requires QoS to support multimedia conferencing over MPLS. The network architect chooses to use per-hop behavior. Which solution must the architect use to classify and mark traffic traveling between branch sites?

- A. BW Queue and DSCP WRED with DSCP AF3
- B. BW Queue with DSCP AF3
- C. BW Queue with DSCP AF4
- D. BW Queue and DSCP WRED with DSCP AF4

**Answer: C**

#### NEW QUESTION # 275
