Try Amazon CLF-C02 Exam Questions In Various Formats That Are Simple to Use. ExamTorrent offers Amazon Exam Questions in three formats to make preparation simple and allow you to study at your own pace.

Amazon AWS Certified Cloud Practitioner Sample Questions (Q300-Q305):

NEW QUESTION # 300

Which AWS service is a highly available and scalable DNS web service?

- A. Amazon Connect
- B. Amazon VPC
- C. Amazon CloudFront
- **D. Amazon Route 53**

Answer: D

Explanation:

Explanation

Amazon Route 53 is a highly available and scalable DNS web service. It is designed to give developers and businesses an extremely reliable and cost-effective way to route end users to Internet applications by translating domain names into the numeric IP addresses that computers use to connect to each other². Amazon Route 53 also offers other features such as health checks, traffic management, domain name registration, and DNSSEC³.

NEW QUESTION # 301

A company runs a MySQL database in its on-premises data center. The company wants to run a copy of this database in the AWS Cloud.

Which AWS service would support this workload?

- A. Amazon Quantum Ledger Database (Amazon QLDB)
- B. Amazon Neptune
- **C. Amazon RDS**
- D. Amazon ElastiCache for Redis

Answer: C

Explanation:

Amazon Relational Database Service (Amazon RDS) is a web service that makes it easier to set up, operate, and scale a relational database in the cloud. It provides cost-efficient and resizable capacity, while automating time-consuming administration tasks such as hardware provisioning, database setup, patching, and backups. Amazon RDS supports six popular database engines: Amazon Aurora, PostgreSQL, MySQL, MariaDB, Oracle Database, and SQL Server. Amazon RDS can support running a copy of a MySQL database in the AWS Cloud, as it offers compatibility, scalability, and availability features.

NEW QUESTION # 302

A company is building a mobile app to provide shopping recommendations to its customers. The company wants to use a graph database as part of the shopping recommendation engine.

Which AWS database service should the company choose?

- A. Amazon Aurora
- B. Amazon DocumentDB (with MongoDB compatibility)
- **C. Amazon Neptune**
- D. Amazon DynamoDB

Answer: C

Explanation:

Amazon Neptune is a service that provides a fully managed graph database that supports property graphs and RDF graphs. It can be used to build applications that work with highly connected datasets, such as shopping recommendations, social networks, fraud detection, and knowledge graphs². Amazon DynamoDB is a service that provides a fully managed NoSQL database that delivers fast and consistent performance at any scale. Amazon Aurora is a service that provides a fully managed relational database that is compatible with MySQL and PostgreSQL. Amazon DocumentDB (with MongoDB compatibility) is a service that provides a fully managed document database that is compatible with MongoDB.

NEW QUESTION # 303

Which AWS services can be used to store files? (Select TWO.)

- A. Amazon SageMaker
- **B. Amazon Elastic Block Store (Amazon EBS)**
- C. AWS Storage Gateway
- **D. Amazon S3**
- E. AWS Lambda

Answer: B,D

Explanation:

Amazon S3 and Amazon EBS are two AWS services that can be used to store files . Amazon S3 is an object storage service that offers high scalability, durability, availability, and performance. Amazon EBS is a block storage service that provides persistent and low-latency storage volumes for Amazon EC2 instances. AWS Lambda, Amazon SageMaker, and AWS Storage Gateway are other AWS services that have different purposes, such as serverless computing, machine learning, and hybrid cloud storage .

NEW QUESTION # 304

A user wants to identify any security group that is allowing unrestricted incoming SSH traffic.
Which AWS service can be used to accomplish this goal?

- **A. AWS Trusted Advisor**
- B. Amazon Cognito
- C. AWS Shield
- D. Amazon Macie

Answer: A

Explanation:

The correct answer to the question is D because AWS Trusted Advisor is an AWS service that can be used to accomplish the goal of identifying any security group that is allowing unrestricted incoming SSH traffic. AWS Trusted Advisor is a service that provides customers with recommendations that help them follow AWS best practices. Trusted Advisor evaluates the customer's AWS environment and identifies ways to optimize their AWS infrastructure, improve security and performance, reduce costs, and monitor service quotas. One of the checks that Trusted Advisor performs is the Security Groups - Specific Ports Unrestricted check, which flags security groups that allow unrestricted access to specific ports, such as port 22 for SSH. Customers can use this check to review and modify their security group rules to restrict SSH access to only authorized sources. Reference: Security Groups - Specific Ports Unrestricted
