

Analytics-Arch-201 Pdf Demo Download | Analytics-Arch-201 Hot Spot Questions

What's more, part of that Test4Cram Analytics-Arch-201 dumps now are free: https://drive.google.com/open?id=1deG6qGBJQdbAI_mXbQcdWRcjPoR-gNaL

Test4Cram offers 100% secure online purchase at all the time. We offer payments through Paypal-one of the most trusted payment providers which can ensure the safety shopping for Analytics-Arch-201 study torrent. Besides, before you choose our material, you can try our Analytics-Arch-201 free demo questions to check if it is valuable for you to buy our Analytics-Arch-201 practice dumps. You will get the latest and updated study dumps within one year after your purchase. So, do not worry the update and change in the actual test, you will be confident in the real test with the help of our Analytics-Arch-201 training torrent.

The passing rate of our Analytics-Arch-201 training braindump is 99% which means that you almost can pass the Analytics-Arch-201 test with no doubts. The reasons why our Analytics-Arch-201 test guide' passing rate is so high are varied. That is because our test bank includes two forms and they are the PDF test questions which are selected by the senior lecturer, published authors and professional experts and the practice test software which can test your mastery degree of our Analytics-Arch-201 study question at any time. The two forms cover the syllabus of the entire Analytics-Arch-201 test. You will pass the Analytics-Arch-201 exam with it.

Free PDF Quiz Salesforce - Analytics-Arch-201 - Salesforce Certified Tableau Architect –Trustable Pdf Demo Download

With these real Analytics-Arch-201 Questions, you can prepare for the test while sitting on a couch in your lounge. Whether you are at home or traveling anywhere, you can do Analytics-Arch-201 exam preparation with our Salesforce Analytics-Arch-201 dumps. Analytics-Arch-201 test candidates with different learning needs can use our three formats to meet their needs and prepare for the Salesforce Analytics-Arch-201 test successfully in one go. Read on to check out the features of these three formats.

Salesforce Analytics-Arch-201 Exam Syllabus Topics:

Topic	Details
Topic 1	<ul style="list-style-type: none">• Monitor and Maintain a Tableau Deployment: This section evaluates skills of Tableau Administrators in monitoring, maintaining, and optimizing Tableau environments. It involves creating custom administrative dashboards, conducting load testing using tools like TabJolt, and analyzing test results. Troubleshooting complex performance bottlenecks in workbooks and server resources is key, as is tuning caching and scaling strategies. It covers leveraging observability tools such as the Resource Monitoring Tool, analyzing logs and metrics, and adjusting architecture accordingly. Automation of maintenance functions using APIs, scripting, and scheduling is included, along with managing server extensions, content automation, dashboard extensions, web data connectors, and secure embedded solutions.

Topic 2	<ul style="list-style-type: none"> • Deploy Tableau Server: This domain assesses the ability of Tableau Administrators to perform production-ready deployments of Tableau Server. It encompasses installing and configuring Tableau Server with external components, supporting air-gapped environments, disaster recovery validations, and blue-green deployments. It includes configuring and troubleshooting various authentication methods such as SAML, Kerberos, and LDAP. The section also covers implementing encryption strategies, installing and verifying Tableau Server on Linux and Windows platforms, resolving installation and configuration issues, and managing service accounts and logging.
Topic 3	<ul style="list-style-type: none"> • Design a Tableau Infrastructure: This section of the exam measures skills of Tableau Consultants and focuses on planning and designing a complex Tableau deployment. It covers gathering user requirements, licensing strategies including Authorization-to-Run, high availability and disaster recovery planning, and mapping server add-ons to the organization's needs. It includes planning and implementing Tableau Cloud with Bridge, authentication, user provisioning, and multi-site configuration. Additionally, it addresses migration planning across Tableau products, operating systems, identity stores, and consolidations, as well as designing process topologies, sizing, node roles, and recommending server configurations including security, hardware, and disaster recovery.

Salesforce Certified Tableau Architect Sample Questions (Q87-Q92):

NEW QUESTION # 87

After analyzing observability data from Tableau Server, you find that response times for certain dashboards are consistently longer than others. What should be your initial response to this finding?

- A. Recommending the redesign of all slower dashboards to simplify their complexity
- **B. Examining the specific dashboards for inefficient calculations, complex queries, or large data sources**
- C. Increasing the memory allocation to Tableau Server to improve dashboard response times
- D. Advising users to avoid using those dashboards during peak hours

Answer: B

Explanation:

Examining the specific dashboards for inefficient calculations, complex queries, or large data sources When certain dashboards consistently show longer response times, the initial response should be to examine these specific dashboards for potential issues like inefficient calculations, overly complex queries, or the use of large data sources. Addressing these aspects can lead to significant improvements in dashboard performance. Option A is incorrect because a full redesign should only be considered after a detailed analysis of the dashboards to identify specific inefficiencies. Option C is incorrect as increasing memory allocation is a broader approach that may not address specific issues related to dashboard design and configuration. Option D is incorrect because advising users to avoid using certain dashboards does not solve the underlying performance issues.

NEW QUESTION # 88

An organization with a mix of cloud and on-premises systems is deploying Tableau Cloud. They want to ensure seamless and secure access for users across all systems. Which authentication method should they implement?

- A. Local authentication exclusively within Tableau Cloud
- B. Separate authentication for Tableau Cloud and on-premises systems
- **C. Single sign-on (SSO) using an external identity provider compatible with their systems**
- D. Manual username and password entry for each session

Answer: C

Explanation:

Single sign-on (SSO) using an external identity provider compatible with their systems Implementing SSO with an external identity provider allows users to seamlessly and securely access both cloud and on-premises systems, providing a unified authentication experience. Option A is incorrect because local authentication in Tableau Cloud does not provide seamless integration with on-premises systems. Option B is incorrect as separate authentication for each system creates a disjointed user experience and increases the risk of security lapses. Option D is incorrect because manual authentication for each session is inefficient and does not provide the security and ease of access that SSO offers.

NEW QUESTION # 89

When implementing SSL encryption for Tableau Server, what is a critical step to ensure secure communication?

- A. Disabling all firewalls to allow for uninterrupted SSL communication
- **B. Obtaining and installing a valid SSL certificate from a trusted certificate authority**
- C. Enabling HTTP on all Tableau Server nodes to ensure compatibility with SSL
- D. Configuring Tableau Server to use a self-signed SSL certificate for ease of setup

Answer: B

Explanation:

Obtaining and installing a valid SSL certificate from a trusted certificate authority A critical step in implementing SSL encryption for Tableau Server is to obtain and install a valid SSL certificate from a trusted certificate authority. This ensures that the communication between the server and clients is encrypted and secure. Using a certificate from a trusted authority also helps in avoiding trust issues with clients connecting to the server. Option A is incorrect because a self-signed SSL certificate might not be trusted by all clients and can lead to security warnings. Option C is incorrect as enabling HTTP does not contribute to SSL encryption; instead, HTTPS should be used. Option D is incorrect because disabling firewalls can compromise the overall security of the server and is not necessary for SSL implementation.

NEW QUESTION # 90

For a large enterprise planning to deploy Tableau Desktop and Tableau Prep to multiple users, what is the recommended automated deployment strategy?

- A. Sending out installation files via email for users to install the applications themselves
- B. Setting up a shared network drive where users can access and install the applications as needed
- **C. Utilizing a software distribution platform like Microsoft Intune to manage and automate the deployment process**
- D. Instructing users to individually download and install Tableau Desktop and Tableau Prep from the official website

Answer: C

Explanation:

Utilizing a software distribution platform like Microsoft Intune to manage and automate the deployment process For automated deployment of Tableau Desktop and Tableau Prep in a large enterprise, using a software distribution platform like Microsoft Intune is recommended. This approach allows for centralized management, ensuring that the applications are deployed consistently and efficiently to all users, while also allowing for tracking and management of software versions and updates. Option A is incorrect because individual downloads and installations are inefficient and can lead to version inconsistencies in a large organization. Option C is incorrect as sending installation files via email is not scalable and does not provide central management or tracking. Option D is incorrect because a shared network drive lacks the ability to manage versions and ensure consistent deployment across the enterprise.

NEW QUESTION # 91

During the migration of a large number of Tableau dashboards, what is an essential capability of the Tableau Content Migration Tool to ensure a smooth transition?

- **A. Its capacity to handle bulk migrations with batch processing of multiple dashboards**
- B. Its function to redesign dashboards automatically to fit the new server's layout
- C. The feature to convert dashboards into different formats before migration
- D. The tool's ability to compress dashboards to reduce file size during migration

Answer: A

Explanation:

Its capacity to handle bulk migrations with batch processing of multiple dashboards The ability to handle bulk migrations through batch processing is crucial for efficiently migrating a large number of dashboards, saving time and reducing the likelihood of errors. Option A is incorrect because compression is not typically a primary concern during dashboard migration. Option C is incorrect as converting dashboards into different formats is not a usual requirement for server migration. Option D is incorrect because automatic redesign is not a necessary function for the migration tool; the focus should be on preserving the original design and functionality.

NEW QUESTION # 92

.....

As a market leader, our company is able to attract quality staffs, it actively seeks out those who are energetic, persistent, and professional to various Analytics-Arch-201 certificate and good communicator. And we strongly believe that the key of our company's success is its people, skills, knowledge and experience. Over 50% of the account executives and directors have been with the Group for more than ten years. The successful selection, development and Analytics-Arch-201 training of personnel are critical to our company's ability to provide a high pass rate of Analytics-Arch-201 exam questions for you to pass the Analytics-Arch-201 exam.
