니다. 성공적인 후보자는 Nutanix 기반 최종 사용자 컴퓨팅 솔루션을 설계, 배포 및 관리하는 능력을 보여줄 수 있으며 이 분야의 전문가로 인정받을 수 있습니다.

>> NCP-EUC 100% 시험패스 덤프 <<

NCP-EUC완벽한 공부자료 - NCP-EUC시험준비

Nutanix NCP-EUC인증시험이 이토록 인기가 많으니 우리Pass4Test에서는 모든 힘을 다하여 여러분이 응시에 도움을 드리겠으며 또 일년무료 업데이트서비스를 제공하며, Pass4Test 선택으로 여러분은 자신의 꿈과 더 가까워질 수 있습니다. 희망찬 내일을 위하여 Pass4Test선택은 정답입니다. Pass4Test선택함으로 당신이 바로 진정한IT인사입니다.

최신 Nutanix Certified Professional (NCP) NCP-EUC 무료샘플문제 (Q127-Q132):

질문 # 127

An administrator has deployed Citrix Virtual Apps and Desktops on a Nutanix dedicated VDI cluster. What is the delivery method in use, based on the curator reports shown in the exhibit?

- A. Linked Clones
- B. Citrix MCS
- C. Full Clones
- D. Citrix Provisioning

정답: B

설명:

the delivery method in use is Citrix MCS. Citrix Machine Creation Services (MCS) is a technology that creates and manages virtual machines from a master image. MCS uses Nutanix storage efficiency features such as deduplication and shadow clones to reduce storage consumption and improve performance. The exhibit shows that the VDI cluster has a high deduplication ratio (7.5x) and a low physical space usage (1.2 TB) compared to the logical space usage (9.1 TB), which indicates that MCS is in use.

질문 # 128

An administrator needs to manage the virtual desktop environment for a small QA group. Which two requirements would prevent a non-persistent deployment? (Choose two.)

- A. users need to test various peripherals.
- B. users need to test application installation routines.
- C. users need to log on and log off frequently.
- D. users need to access web-based applications.

정답: A,B

설명:

non-persistent VDI is a type of virtual desktop infrastructure (VDI) that does not save any changes made by the user on the virtual machine (VM) across sessions. Non-persistent VDI uses a master image to create and delete VMs as needed.

Therefore, if the administrator needs to manage a non-persistent deployment, they should avoid any requirements that involve modifying or installing applications on the VMs, as those changes would not be saved.

질문 # 129

An administrator has received multiple tickets from users experiencing log-on and log-off slowness while using VDI non-persistent desktops, other users in same VDI farm using persistent desktops are not experiencing the same issue.

Currently, the administrator is leveraging an ESXi-based Nutanix all-flash cluster environment with a VMware Horizon Infrastructure. What is causing the slowness for the non-persistent users?

- A. user accounts configured with Roaming Profiles
- B. Nutanix AOS software running older versions.

- C. Network slowness due to high latency
- D. Desktops don't have enough hardware resources.

정답: A

설명:

roaming profiles are a way to deliver user settings across physical and virtual desktops. However, they can also cause issues such as profile unload failures² and slow log-on and log-off times¹.

질문 # 130

A persistent desktop that is already configured for inline-compression can take advantage of which other storage space-saving technology?

- **A. Inline Erasure Coding**
- B. Capacity Deduplication
- C. Storage Pools
- D. Increased Redundancy Factor

정답: A

설명:

For persistent desktop workloads (full clones) where data efficiency is critical, Nutanix recommends leveraging Inline Compression as the primary reduction technology. To further optimize storage capacity without the heavy memory overhead associated with Deduplication, the recommended complementary technology is Erasure Coding (specifically Inline Erasure Coding in newer AOS versions or EC-X post- process).

Erasure Coding increases the effective usable capacity of the cluster by stripping data parity across nodes (similar to RAID 5/6 logic) rather than relying on the default Replication Factor 2 (RAID 1 logic) for cold or write-cold data. Since persistent desktops often contain large amounts of static data after the initial OS and application installation, Erasure Coding significantly reduces the storage footprint. While Capacity Deduplication (Option D) is available, it is generally reserved for specific use cases (like full clone setups with high data commonality) due to its high RAM requirement for fingerprint metadata, making Erasure Coding the more universally applicable "other" technology for general persistent VDI.

질문 # 131

An administrator has deployed a pool of non-persistent Windows 11 virtual desktops configured with local profiles. Users have complained about application settings not being retained between sessions and slow initial login times. What solution would best resolve the user complaints?

- **A. Enable Virtual Disk-based profile solution**
- B. Enable Microsoft Roaming Profiles
- C. Incorporate application settings in base image
- D. Implement Mandatory Profiles

정답: A

설명:

To resolve issues with persistence (retaining settings) and login performance in a non-persistent VDI environment, the industry standard and Nutanix-recommended solution is to Enable a Virtual Disk-based profile solution (such as FSLogix Profile Containers or Citrix Profile Management containers).

* Retaining Settings: Unlike local profiles (wiped on reboot) or mandatory profiles (read-only), containerized profiles capture all user writes and persist them to a VHD/VHDX file on a file share (e.g., Nutanix Files).

* Speed: Microsoft Roaming Profiles (Option A) require copying files over the network at login, causing slowness. Virtual Disk-based solutions mount the profile disk instantly over the network, making the login process nearly as fast as a local profile while ensuring data persistence.

질문 # 132

.....

여러분이 어떤 업계에서 어떤 일을 하든지 모두 항상 업그레이되는 자신을 원할 것입니다..it업계에서도 이러합니

다.모두 자기자신의 업그레이드는 물론 자기만의 공간이 있기를 바랍니다.전문적인 IT인사들은 모두 아시다싶이 Nutanix NCP-EUC인증시험이 여러분의 이러한 요구를 만족시켜드립니다.그리고 우리 Pass4Test는 이러한 꿈을 이루어드립니다.
