Google ADP All-in-One Exam Guide Practice for ADP exam success

Here our ADP exam braindumps are tailor-designed for you. Unlike many other learning materials, our Associate Data Practitioner guide torrent is specially designed to help people pass the exam in a more productive and time-saving way, and such an efficient feature makes it a wonderful assistant in personal achievement as people have less spare time nowadays. On the other hand, ADP Exam Braindumps are aimed to help users make best use of their sporadic time by adopting flexible and safe study access.

Google Associate Data Practitioner Sample Questions (Q33-Q38):

NEW QUESTION # 33

You need to design a data pipeline to process large volumes of raw server log data stored in Cloud Storage.

The data needs to be cleaned, transformed, and aggregated before being loaded into BigQuery for analysis.

The transformation involves complex data manipulation using Spark scripts that your team developed. You need to implement a solution that leverages your team's existing skillset, processes data at scale, and minimizes cost. What should you do?

- A. Use Dataform to define the transformations in SQLX.
- B. Use Cloud Data Fusion to visually design and manage the pipeline.
- C. Use Dataproc to run the transformations on a cluster.
- D. Use Dataflow with a custom template for the transformation logic.

Answer: C

NEW QUESTION # 34

Your organization has a BigQuery dataset that contains sensitive employee information such as salaries and performance reviews.

The payroll specialist in the HR department needs to have continuous access to aggregated performance data, but they do not need continuous access to other sensitive data. You need to grant the payroll specialist access to the performance data without granting them access to the entire dataset using the simplest and most secure approach. What should you do?

- A. Create a table with the aggregated performance data. Use table-level permissions to grant access to the payroll specialist.
- **B. Use authorized views to share query results with the payroll specialist.**
- C. Create row-level and column-level permissions and policies on the table that contains performance data in the dataset. Provide the payroll specialist with the appropriate permission set.
- D. Create a SQL query with the aggregated performance data. Export the results to an Avro file in a Cloud Storage bucket. Share the bucket with the payroll specialist.

Answer: B

NEW QUESTION # 35

Your organization has several datasets in their data warehouse in BigQuery. Several analyst teams in different departments use the datasets to run queries. Your organization is concerned about the variability of their monthly BigQuery costs. You need to identify a solution that creates a fixed budget for costs associated with the queries run by each department. What should you do?

- A. Create a single reservation by using BigQuery editions. Assign all analysts to the reservation.
- B. Create a custom quota for each analyst in BigQuery.
- **C. Assign each analyst to a separate project associated with their department. Create a single reservation for each department by using BigQuery editions. Create assignments for each project in the appropriate reservation.**
- D. Assign each analyst to a separate project associated with their department. Create a single reservation by using BigQuery editions. Assign all projects to the reservation.

Answer: C

NEW QUESTION # 36

You are designing a pipeline to process data files that arrive in Cloud Storage by 3:00 am each day. Data processing is performed in stages, where the output of one stage becomes the input of the next. Each stage takes a long time to run. Occasionally a stage fails, and you have to address the problem. You need to ensure that the final output is generated as quickly as possible. What should you do?

- **A. Design the processing as a directed acyclic graph (DAG) in Cloud Composer. Clear the state of the failed task after correcting any stage output data errors.**
- B. Design a Spark program that runs under Dataproc. Code the program to wait for user input when an error is detected. Rerun the last action after correcting any stage output data errors.
- C. Design the workflow as a Cloud Workflow instance. Code the workflow to jump to a given stage based on an input parameter. Rerun the workflow after correcting any stage output data errors.
- D. Design the pipeline as a set of PTransforms in Dataflow. Restart the pipeline after correcting any stage output data errors.

Answer: A

NEW QUESTION # 37

You need to transfer approximately 300 TB of data from your company's on-premises data center to Cloud Storage. You have 100 Mbps internet bandwidth, and the transfer needs to be completed as quickly as possible. What should you do?

- A. Compress the data, upload it to multiple cloud storage providers, and then transfer the data to CloudStorage.
- **B. Request a Transfer Appliance, copy the data to the appliance, and ship it back to Google.**
- C. Use Cloud Client Libraries to transfer the data over the internet.
- D. Use the gcloud storage command to transfer the data over the internet.

Answer: B

NEW QUESTION # 38

.....

As we all know, it is a must for all of the candidates to pass the exam if they want to get the related ADP certification which serves as the best evidence for them to show their knowledge and skills. If you want to simplify the preparation process, here comes a piece of good news for you. Our ADP Exam Question has been widely praised by all of our customers in many countries and our

company has become the leader in this field. Now I would like to give you some detailed information about the advantages of our ADP guide torrent.
