## Reliable Microsoft GH-100 Test Sample & New GH-100 Test Registration

Here, we provide you with the best GH-100 premium study files which will improve your study efficiency and give you right direction. The content of GH-100 study material is the updated and verified by IT experts. Professional experts are arranged to check and trace the Microsoft GH-100 update information every day. The GH-100 exam guide materials are really worthy of purchase. The high quality and accurate GH-100 questions & answers are the guarantee of your success.

### Microsoft GH-100 Exam Syllabus Topics:

Topic	Details
Topic 1	<ul style="list-style-type: none"><li>Describe how GitHub is deployed, distributed, and licensed: This section of the exam measures skills of GitHub Enterprise Administrators and highlights the deployment models of GitHub Enterprise Server, Enterprise Cloud, and GitHub AE. It covers licensing structures, billing for seat licenses and metered services, support options, and monitoring license usage across users and machine accounts.</li></ul>
Topic 2	<ul style="list-style-type: none"><li>Manage GitHub Actions: This section of the exam measures skills of DevOps Engineers and emphasizes managing workflows, reusable actions, and distribution strategies within the enterprise. It explains configuring organization-level policies, managing self-hosted and GitHub-hosted runners, controlling access through IP allow lists, handling encrypted secrets, and integrating third-party vaults for workflow security.</li></ul>

Topic 3	<ul style="list-style-type: none"> <li>• <b>Manage access and permissions based on membership:</b> This section of the exam measures skills of DevOps Engineers and reviews how to manage organizations, teams, and repository permissions. It includes default permission settings, team synchronization through AD, scripting across multiple organizations, and aligning enterprise policies with trust requirements. It also contrasts roles such as organization members, owners, collaborators, and billing managers.</li> </ul>
Topic 4	<ul style="list-style-type: none"> <li>• <b>Enable secure software development and ensure compliance:</b> This section of the exam measures skills of GitHub Enterprise Administrators and deals with applying GitHub's security and compliance capabilities. It covers policies, auditing, scrubbing sensitive data, secret scanning, code scanning with CodeQL, dependency management with Dependabot, and implementing security response plans. It also explores authentication tokens, app security policies, and enterprise managed users.</li> </ul>
Topic 5	<ul style="list-style-type: none"> <li>• <b>Support GitHub Enterprise for users and key stakeholders:</b> This section of the exam measures skills of GitHub Enterprise Administrators and covers supporting users, identifying issues that can be resolved internally versus those needing GitHub Support, and generating support bundles and diagnostics. It also involves recognizing underutilized features, managing workflows like branching and pull requests, understanding CI</li> <li>• CD strategies, recommending tooling, and extending capabilities through APIs or Marketplace apps.</li> </ul>
Topic 6	<ul style="list-style-type: none"> <li>• <b>Manage GitHub Packages:</b> This section of the exam measures skills of GitHub Enterprise Administrators and focuses on managing GitHub Packages, their use in workflows, and how they differ from releases. It involves accessing, writing, and sharing packages across teams while ensuring integration into CI</li> <li>• CD pipelines.</li> </ul>

## Microsoft GitHub Administration Sample Questions (Q20-Q25):

### NEW QUESTION # 20

Which events from the audit log are exposed by the GraphQL API? Each answer presents a complete solution. (Choose three.)

- A. promoting users to administrators
- B. changes to permissions of a GitHub App
- C. pushes to repositories
- D. changes in permissions
- E. cloning of repositories

**Answer: A,B,D**

Explanation:

The GraphQL Audit Log API surfaces entries whenever repository or organization permissions are changed ("Changes permissions").

It records when users are elevated to administrative roles ("Promotes users to admin").

It logs alterations to a GitHub App's granted permissions ("Changes permissions of a GitHub App").

### NEW QUESTION # 21

How does GitHub handle secrets found via secret scanning in a public repository?

- A. It alerts the service provider (e.g., AWS, Stripe).
- B. It notifies the admin via webhook.
- C. It deletes the secret from the repository automatically.
- D. It immediately blocks the commit to protect the secret.

**Answer: A**

Explanation:

When secret scanning detects a supported credential in a public repository, GitHub notifies the issuing service provider so they can revoke or rotate the exposed secret.

### NEW QUESTION # 22

You need to create a support bundle for your GitHub Enterprise Server instance with the hostname ghe.avocado.corp. What command should you use to create a support bundle?

- A. `curl -u admin https://ghe.avocado.corp/diagnostics/support-bundle.tgz -o`
- B. `ssh -p 122 admin@ghe.avocado.corp -- 'ghe-config generate-support-bundle' > support-bundle.tgz`
- C. `ssh -p 122 admin@ghe.avocado.corp - 'ghe-diagnostics' > support-bundle.tgz`
- **D. `ssh -p 122 admin@ghe.avocado.corp -- 'ghe-support-bundle -o' > support-bundle.tgz`**

**Answer: D**

Explanation:

Run the `ghe-support-bundle` command over SSH on your appliance and redirect its output to a file. For example:  
`ssh -p 122 admin@ghe.avocado.corp -- 'ghe-support-bundle -o' > support-bundle.tgz` This invokes the built-in support-bundle utility on your GitHub Enterprise Server instance and captures the resulting archive locally.

### NEW QUESTION # 23

A financial services company is evaluating GitHub account types. Which of the following is a key distinction between GitHub Enterprise Managed Users and Personal Accounts?

- A. Enterprise Managed Users can collaborate across both personal and enterprise repositories.
- B. Enterprise Managed Users require the organization to manage their own authentication server.
- **C. Personal Accounts are owned by users and can be used for both personal and professional work.**
- D. Personal Accounts provide stricter control over repositories and user activity.

**Answer: C**

Explanation:

Personal Accounts are owned and controlled by individual users and can serve both their personal projects and professional work, whereas Enterprise Managed Users exist solely within the enterprise context and cannot be used for personal repositories.

### NEW QUESTION # 24

When comparing Group SCIM to Team Sync for identity management in GitHub Enterprise, which statement is Correct?

- A. Group SCIM requires less initial configuration than Team Sync.
- B. Team Sync provides more automated user deprovisioning than Group SCIM.
- **C. Group SCIM enables centralized user and group management through the IdP.**
- D. Team Sync supports more identity providers than Group SCIM.

**Answer: C**

Explanation:

GroupSCIM lets you manage both user accounts and group memberships centrally in your identity provider - automatically provisioning, updating, and deprovisioning users and groups in GitHub - whereas TeamSync only mirrors IdP group membership into existing GitHub teams.

### NEW QUESTION # 25

.....

We guarantee that this study material will prove enough to prepare successfully for the GH-100 examination.
