예를 들어 Adobe AD0-E725 덤프를 보면 어떤 덤프제공사이트에서는 문항수가 아주 많은 자료를 제공해드리지만 저희 Adobe AD0-E725덤프는 문항수가 적은 편입니다. 왜냐하면 저희는 더 이상 출제되지 않는 오래된 문제들을 삭제해버리기 때문입니다. 문제가 많으면 고객들의 시간을 허비하게 됩니다. PassTIP는 응시자에게 있어서 시간이 정말 소중한다는 것을 잘 알고 있습니다.

Adobe AD0-E725 시험요강:

주제	소개
주제 1	- External Integrations: This section of the exam measures the skills of Integration Specialists and focuses on connecting Adobe Commerce with external SaaS services. It encompasses the skills needed to customize data flows, utilize Adobe App Builder for extensibility, and implement Adobe I - O events and webhooks to create automated and connected business processes.
주제 2	Customizations: This section of the exam measures the skills of Solutions Engineers and involves modifying and extending platform functionality. This includes customizing core areas like the product catalog, checkout process, and admin panel, as well as manipulating data entities, customizing APIs, working with message queues, and writing integration tests to ensure code quality and functionality.
주제 3	Cloud: This section of the exam measures the skills of Cloud Architects and covers the deployment and management of Adobe Commerce on cloud infrastructure. It requires explaining the fundamental cloud architecture, performing setup and configuration tasks, and utilizing the Adobe Commerce Cloud CLI tool to manage the environment effectively.
주제 4	Section 1: Architecture: This section of the exam measures the skills of Backend Developers and covers the core structural concepts of Adobe Commerce. It involves demonstrating effective cache implementation, understanding key code components like plugins and observers, and managing multi-site configurations on a single instance. The domain also includes explaining the use of Git patches, critical security features, the CRON scheduling system, and how indexing functions within the platform.

우리PassTIP에서는 여러분들한테 아주 편리하고 시간 절약함과 바꿀 수 있는 좋은 대책을 마련하였습니다. PassTIP에서는 Adobe AD0-E725인증 시험관련가이드로 효과적으로 Adobe AD0-E725시험을 패스하도록 도와드리겠습니다. 만약 여러분이 다른 사이트에서도 관련덤프자료를 보셨을 경우 페이지 아래를 보시면 자료출처는 당연히 PassTIP 일 것입니다. PassTIP의 자료만의 제일 전면적이고 또 최신 업데이트일것입니다.

최신 Adobe Commerce AD0-E725 무료샘플문제 (Q33-Q38):

질문 # 33

A client wants to calculate tax differently when an order is billed for a range of particular postcodes. They want to implement their own system instead of using a third-party system. The Developer is asked to assist in this task by creating a conditional webhook. What must be done to achieve this?

- A. Create a webhooks.xml file and add the rules wanted in the form of a rule node element using the regex operator to catch a range of postcodes.
- B. Create an after plugin on the webhook class and check for a list of postcodes at the time of processing and returning true for certain postcodes.
- C. Implement a new webhook with a list postcodes and link it to the original webhook, then advise the client to monitor for the new webhook instead.

정답: A

질문 # 34

An Adobe Commerce Cloud Developer is tasked with investigating slow page loads and intermittent errors reported by a client after a recent deployment to their Pro Production environment.

Which action should the Developer use to quickly access and analyze the necessary data?

- A. Access Cloud Console to review environment messages and deployment logs that took place during the previous deployment to production.
- B. Go to New Relic Log Management to access aggregated log data, allowing the analysis of application, infrastructure, CDN, and WAF errors.
- C. Connect via SSH into each production node to review system and application logs independently for a more accurate representation of issues being logged.

정답: B

설명:

In Adobe Commerce Cloud Pro Production, logs are spread across multiple nodes, so manually checking each node (A) is inefficient. The correct approach is to use New Relic Log Management, which aggregates logs from all services and nodes. This allows developers to quickly analyze application logs, infrastructure logs, CDN, and WAF errors in one place.

A is inefficient and not recommended.

C only shows deployment logs, not ongoing runtime errors.

B is correct: New Relic Log Management is the single source of truth for performance and error analysis.

Adobe Commerce Cloud DevDocs - Log management with New Relic

질문 # 35

A Developer discovers that inline scripts are no longer working. This issue occurred after upgrading to the latest version of Adobe Commerce. When checking the console, the errors indicate that the scripts are not allowed to execute.

The following is an example script:

```
<div id="action-div" onclick="someComponent('title')>Action</div>
```

How should the Developer adapt the script to run properly according to security practices?

- A. `<?php echo $block->renderAllowedElement('<div id="action-div" onclick="someComponent(\'title\')">Action</div>'); ?>`
- B. `<?php echo $secureRenderer->renderEventListenerAsTag('onclick', 'someComponent(\'title\')', '#action-div'); ?>`
- C. `<?php echo $escaper->renderSecureTag('<div id="action-div" onclick="someComponent(\'title\')">Action</div>'); ?>`

정답: B

설명:

Since Magento 2.3.5, inline JavaScript is restricted by default due to stricter Content Security Policy (CSP) enforcement. Developers must use the SecureHtmlRenderer class to safely render inline event listeners. Option C correctly uses `$secureRenderer->renderEventListenerAsTag()` to safely attach the onclick event listener to `#action-div`. Options A and B are invalid or unsupported for this purpose.
Reference:
Adobe Commerce DevDocs - Secure HTML rendering

질문 # 36

A Developer working on an Adobe Commerce Cloud project encounters an issue with the database service that requires investigation. To troubleshoot the issue, the Developer decides to securely access the cloud services from the local machine to directly interact with the services and run diagnostic commands.
Which command step is required to achieve this?

- A. Use the `php bin/magento cloud:tunnel:connect` command to access the cloud services.
- **B. Use the `magento-cloud tunnel:open` command to access the cloud services.**
- C. Use the `magento-cloud service:connect` command to access the cloud services.

정답: B

질문 # 37

A client reports an issue with indexers that are failing and remain stuck. The client asks a Developer to solve this issue. What recommended solution should the Developer use?

- **A. In `app/etc/env.php` `indexer_sync_mode -> false` under `indexer` node.**
- B. Create a cronjob that runs `bin/magento indexer:reindex` periodically.
- C. Run `bin/magento indexer:set-mode realtime <indexer_list>`.

정답: A

질문 # 38
