질문 # 38

Your client has implemented Oracle Cloud Applications with their United States business unit and United Kingdom business unit. After six months, they acquired another company in China and added a China business unit. A project accountant in your organization is authorized to access transactions for the US, UK, and China business units. The project accountant can see the transactions for the US and UK business units but not for the China business unit. Why is he not able to see the transactions for the China business unit? (Choose the best answer.)

- A. The US and UK business units are linked to different ledgers than the China business unit.
- B. The JOB role relevant to the China business unit is not assigned to the project accountant.
- C. The project accountant is not assigned to the external role that grants access to the China business unit.
- D. The China business unit is associated with a different legal entity than the US and UK business units.

정답: C

설명:

To access transactions for a business unit, the project accountant needs to be assigned to an external role that grants access to that business unit. The external role is defined by the security profile of the business unit and can be different for each business unit. The job role and the legal entity are not relevant for accessing transactions for a business unit. The ledger is relevant for accounting transactions, but not for project transactions. 질문 # 39

Which three can be tracked as Status tracking for Project Invoice Approval Notifications? (Choose three.)

- A. Date-wise updates to the document
- B. Person assigned for approval
- C. Pre-approval activities
- D. Prior actions
- E. Persons with whom it is still pending approval

정답: B,D,E

설명:

Status tracking is a feature that allows you to track the progress and history of project invoice approval notifications. Status tracking provides information such as who approved or rejected the invoice, when and why they took the action, who is currently assigned to approve or reject the invoice, etc. Three of the information that can be tracked as status tracking for project invoice approval notifications are:

* Person assigned for approval: This shows the name of the person who is currently assigned to approve or reject the invoice notification.

* Prior actions: This shows the list of actions that have been taken on the invoice notification by previous approvers or rejectors, such as approve, reject, request information, etc.

* Persons with whom it is still pending approval: This shows the list of persons who are still in the approval chain for the invoice notification and have not taken any action yet. Pre-approval activities and date-wise updates to the document are not information that can be tracked as status tracking for project invoice approval notifications. Pre-approval activities are tasks that need to be performed before submitting an invoice for approval, such as validating or transferring the invoice. Date-wise updates to the document are changes that are made to the invoice document after it has been submitted for approval, such as adjusting or reversing the invoice. 질문 # 40

You have a billable project for which the following details are provided:

Associated Inception-To-Date (ITD) Project Actual Cost: USD 60

Associated Project Budgeted Cost: USD 300

Contract Amount: USD 1000

Project Funded Amount: USD 750

Sum of Existing Revenue Events: USD 80

Identify the Associated Project Spent revenue that will get generated based on the preceding details. (Choose the best answer.)

- A. USD 134
- B. USD 184
- C. USD 70
- D. USD 120

정답: C

설명:

Ref: <https://docs.oracle.com/en/cloud/saas/project-portfolio-management/19b/oapjb/manage-project-contract-revenue.html#OAPJB164173> Associated Project Percent Spent Example The following formula calculates the percent spent revenue for the associated project.

$$\left(\frac{\text{Sum of ITD Actual Cost for every subtask that is part of the associated task}}{\text{Sum of Total Budgeted cost for every task that is part of associated task}} \times \text{Associated Project Funded Amount} \right) - \text{Sum of Existing Invoice Event Amounts for the Associated Project}$$

$$\left(\frac{60}{300} \times 750 \right) - 80 = 70 \left(\frac{\text{Actual Cost}}{\text{Budgeted Cost}} \times \text{Budgeted Revenue} \right) - \text{Sum of Revenue Event Amount}$$
