2026 Salesforce AP-219 Perfect Updated Demo

This Salesforce Order Management Administrator Accredited Professional (AP-219) software has a simple-to-use interface. By using the AP-219 practice exam software, you can evaluate your mistakes at the end of every take and overcome them. Our software helps you to get familiar with the format of the original AP-219 test. Software lets you customize your Salesforce AP-219 Practice Exam's duration and question numbers as per your practice needs. You just need an active internet connection to confirm the license of your product. All Windows-based computers support this AP-219 practice exam software.

Salesforce Order Management Administrator Accredited Professional Sample Questions (Q78-Q83):

NEW QUESTION # 78

What object does the Ensure Funds Apex Flow action look for when resolving Invoice balances associated with an Order Summary?

- A. Payment Summaries
- B. Order Payments
- **C. Order Payment Summaries**
- D. Payments

Answer: C

Explanation:

The object that the Ensure Funds Apex Flow action looks for when resolving Invoice balances associated with an Order Summary is Order Payment Summaries. This object represents the payments made for an order, and it has a lookup relationship to both Invoice and Order Summary objects. The Ensure Funds Apex Flow action uses this object to calculate the balance due for each Invoice and update its status accordingly. Verified Reference: https://help.salesforce.com/s/articleView?id=sf.order_management_order_payment_summary.htm&type=5

NEW QUESTION # 79

An administrator is attempting to deploy a Change Set from a development org to a test org but the test org is not available in the list of target organizations. What are two reasons that could cause this issue?

- **A. The development org and test org are not associated with the same production org.**
- B. ChangeSets can only be deployed from a sandbox org to a production org, not another sandbox org.
- C. The components in the Change set could not be found within the test org
- **D. The development org has not been approved to upload Change Sets from within the test org**

Answer: A,D

Explanation:

Two reasons that could cause the issue of not being able to deploy a Change Set from a development org to a test org are:
 The development org has not been approved to upload Change Sets from within the test org. To deploy ChangeSets between two sandbox orgs, the administrator needs to establish a deployment connection between them. A deployment connection allows one org to send outbound Change Sets and another org to receive inbound Change Sets. The administrator can create a deployment connection request from the development org and approve it from the test org.
 The development org and test org are not associated with the same production org. To deploy Change Sets between two sandbox orgs, they must be linked to the same production org. A production org is an org that contains live data and business processes. A sandbox org is a copy of a production org that is used for development, testing, or training purposes. Sandbox orgs inherit the deployment connections of their source production orgs. Reference: Deploy Using Change Sets, Deploy a Change Set

NEW QUESTION # 80

At minimum, a custom attribute must be created on which objects for the values to automap in Order Management from B2C Commerce Cloud at the Order item level?

- A. Order, Order Summary, Change Order and Fulfillment Order
- B. Order and Order Summary
- C. Order, Order Summary, Order Item and Order Item Summary
- **D. Order Item and Order Item Summary**

Answer: D

NEW QUESTION # 81

An administrator needs to import Order Summary records containing historical data but does not want them to be actioned on by Order Management. Which feature supports this use case?

- A. Custom checkbox
- **B. Unmanaged Order Checkbox**
- C. Order Management Type Picklist
- D. Order Life Cycle Type Picklist

Answer: B

Explanation:

The feature that supports this usecase is the Unmanaged Order Checkbox. This is a standard field on the Order Summary object that indicates whether the order is managed by Order Management or not. If this field is checked, then the order is not actioned on by Order Management, and it does not trigger any flows or processes. The administrator can use this field to import Order Summary records containing historical data without affecting the order lifecycle. Verified Reference: https://help.salesforce.com/s/articleView?id=sf.order_management_order_summary.htm&type=5

NEW QUESTION # 82

Which of the following options represent two ways that an administrator can utilize APIs in Workbench to query OrderSummaries?

- A. Apex API and Connect API
- B. Composite API and Invocable API
- **C. Platform API and Composite API**
- D. Invocable API and Apex API
- E. Connect API and Platform API

Answer: C

Explanation:

The Platform API and the Composite API are two ways that an administrator can use APIs in Workbench to query Order Summaries. The Platform API allows querying, creating, updating, deleting, and searching records in Salesforce. The Composite API allows combining multiple requests into a single call, which can improve performance and reduce complexity.

NEW QUESTION # 83

.....

More qualified certification for our future employment has the effect to be reckoned with, only to have enough qualification certifications to prove their ability, can we win over rivals in the social competition. Our AP-219 Exam Guide is suitable for everyone whether you are a business man or a student, because you just need 20-30 hours to practice, then you can attend to your exam.
