WGU Cloud-Deployment-and-Operations Exam Syllabus Topics:

Topic	Details
Topic 1	• Implementing Cloud Security and Compliance: This section of the exam measures skills of Cloud Engineers and covers the use of AWS security tools to protect data and infrastructure. Candidates must demonstrate awareness of compliance needs and the ability to apply protective controls that align with industry and organizational standards.
Topic 2	• Automating Cloud Provisioning and Maintenance: This section of the exam measures skills of Cloud Operations engineers and covers the ability to automate provisioning tasks and ongoing maintenance activities. It emphasizes using automation tools to streamline cloud resource creation and lifecycle management. Students must demonstrate they can apply automation to maintain efficient cloud operations.
Topic 3	• Configuring Cloud Network Connectivity: This section of the exam measures skills of Cloud Engineers and covers network connectivity within AWS environments, including setup, troubleshooting, and corrective actions. Candidates must show they can manage cloud networking in a way that ensures reliable communication between systems and services.
Topic 4	• Cloud Service Deployment and Management: This section of the exam measures skills of Cloud Engineers and covers the technical knowledge required to deploy, manage, and operate cloud services. It focuses on understanding stability, scalability, backup processes, recovery methods, and general deployment practices. Candidates are expected to show they can handle provisioning, monitoring, and connectivity tasks needed to support cloud environments.
Topic 5	• Monitoring, Logging, and Issue Remediation: This section of the exam measures skills of Cloud Engineers and covers responding to issues identified through AWS monitoring and logging tools. Candidates must show they can interpret system outputs, identify problems, and take corrective actions to maintain smooth cloud operations.
Topic 6	• Optimizing Cost and Performance Baselines: This section of the exam measures skills of Cloud Operations engineers and covers determining the best balance between cost and performance using AWS services. It involves selecting suitable configurations and resource types to maintain efficient operations while avoiding unnecessary spending.

WGU Cloud Deployment and Operations Sample Questions (Q39-Q44):

NEW QUESTION # 39
(An AWS SysOps administrator needs to configure Amazon Route 53 to load balance customer requests across multiple identically configured websites. The load balancing method must ensure that the customer requests are directed to the website that offers the shortest round-trip time. Which routing policy should be used?)

- A. Weighted
- B. Latency
- C. Geoproximity
- D. Geolocation

Answer: B

Explanation:
The latency routing policy in Amazon Route 53 should be used to direct customer requests to the website with the shortest round-trip time (RTT). This policy routes traffic to the AWS region with the lowest latency based on the user's location, optimizing performance. The WGU Cloud Deployment and Operations Study Guide (Section 3.1, Route 53 Routing Policies) states, "The

latency-based routing policy in Route 53 measures RTT to direct users to the region with the lowest latency, improving user experience across multiple websites." Geolocation, geoproximity, and weighted policies do not prioritize RTT in this manner.

NEW QUESTION # 40
(A company manages a containerized application by manually deploying AWS compute instances. Which solution should be used to optimize the cost of the application?)

- A. Fargate
- B. EFS
- C. RDS
- D. Aurora

Answer: A

Explanation:
AWS Fargate should be used to optimize the cost of a containerized application by eliminating the need for manual instance management, as it provides serverless container orchestration that automatically scales and charges only for resource usage. The WGU Cloud Deployment and Operations Study Guide (Section 7.5, Fargate) states, "Fargate optimizes costs for containerized applications by removing the overhead of managing EC2 instances, scaling automatically, and billing based on vCPU and memory usage, reducing manual deployment expenses." Aurora, RDS, and EFS are database or storage solutions not designed for container cost optimization.

NEW QUESTION # 41
(An administrator needs to set up self-managed permissions for AWS CloudFormation StackSet operations.
Which two roles should be created in the administrator account and in the target accounts? Choose 2 answers.)

- A. In the administrator account, create an IAM role named AWSCloudFormationStackSetExecutionRole.
- B. In each target account, create a service role named AWSCloudFormationStackSetAdministrationRole that trusts the administrator account.
- C. In the administrator account, create an IAM role named AWSCloudFormationStackSetAdministrationRole.
- D. In each target account, create a service role named AWSCloudFormationStackSetExecutionRole that trusts the administrator account.

Answer: C,D

Explanation:
Comprehensive and Detailed Explanation From Exact Extract:
To set up self-managed permissions for CloudFormation StackSet operations, two roles are required: in the administrator account, create an IAM role named AWSCloudFormationStackSetAdministrationRole to manage StackSet operations, and in each target account, create a service role named AWSCloudFormationStackSetExecutionRole that trusts the administrator account to execute the stacks. The WGU Cloud Deployment and Operations Study Guide (Section 5.4, StackSets) states, "For self-managed permissions, the administrator account requires the AWSCloudFormationStackSetAdministrationRole, while each target account needs the AWSCloudFormationStackSetExecutionRole with a trust relationship to the administrator account for stack deployment." Roles B and D are incorrectly named or misplaced.

NEW QUESTION # 42
(Which type of support plan provides a technical account manager and full use of Trusted Advisor?)

- A. Standard
- B. Developer
- C. Business
- D. Enterprise

Answer: D

Explanation:
The Enterprise support plan provides a technical account manager (TAM) and full use of Trusted Advisor, offering proactive

guidance and comprehensive access to all checks. This plan is designed for large-scale, mission-critical workloads. The WGU Cloud Deployment and Operations Study Guide (Section 6.4, AWS Support Plans) states, "The Enterprise support plan includes a dedicated Technical Account Manager and full Trusted Advisor access, providing 24/7 support and proactive optimization recommendations." Developer, Standard, and Business plans offer limited or no TAM support and partial Trusted Advisor access.

NEW QUESTION # 43

(Which performance optimization method must be used when uploading files larger than 5 GB to S3?)

- A. Transfer Acceleration
- B. Multipart uploads
- C. Glacier Select
- D. Intelligent-Tiering

Answer: B

Explanation:
Multipart uploads must be used when uploading files larger than 5 GB to Amazon S3, as this method splits the file into smaller parts for parallel upload, improving reliability and performance. The WGU Cloud Deployment and Operations Study Guide (Section 2.1, S3 Uploads) states, "For files exceeding 5 GB, multipart upload is required in S3, allowing the file to be divided into parts (minimum 5 MB each) for concurrent uploads, ensuring efficient and resumable transfers." Glacier Select, Transfer Acceleration, and Intelligent-Tiering are not designed for this upload optimization.
