### ASQ Certified Manager of Quality/Organizational Excellence Exam CMQ-OE Prüfungsfragen mit Lösungen (Q448-Q453):

#### 448. Frage

Many executives believe now believe that decisions should be made by those people with the best information to make decisions, regardless of their level in the organization. More decentralization might be needed under one or more of the following conditions:

- A. None of these
- B. Lower level managers are capable and experienced at making decisions
- C. Decisions are relatively minor
- D. The environment is complex or uncertain

**Antwort: B,C,D**

#### 449. Frage

Which of the following is an example of common cause variation?

- A. Inadequate training
- B. Inherent measurement error
- C. Equipment failure
- D. Human error

**Antwort: B**

Begründung:

Common cause variation is an essential concept in quality management. It refers to the inherent variability that exists in a process due to its normal operation. Common causes are part of the system and are not attributable to specific events or factors. They are the typical fluctuations that occur when a process is stable and in statistical control.

Examples of common cause variation include:

\* Inherent Measurement Error: Measurement instruments inherently have some level of error or imprecision. This variation is common and expected.

\* Equipment Variation: Even well-maintained equipment will exhibit some variability in its performance due to design tolerances, wear, and other factors.

\* Process Variation: Processes naturally have variations in their output due to factors such as material properties, environmental conditions, and machine settings.

\* Human Performance: Human operators, even when well-trained, introduce variability due to their inherent capabilities and limitations.

In contrast, special cause variation arises from specific events or factors that are not part of the normal process.

These events lead to sudden and significant changes in the process output. Special causes are typically identifiable and can be traced back to specific events or conditions.

In summary, common cause variation is the background noise of a process, while special cause variation represents unexpected disturbances. Effective quality management involves understanding and managing both types of variation to improve processes and achieve better outcomes.

- A. Perform a benchmarking study
- B. Obtain information about competitor processes
- C. Perform a benchmarking study
- D. Perform a market growth analysis

Antwort: A

#### 451. Frage

What is the business approach underlying the Malcolm Baldrige National Quality Award (MBNQA)?

- A. Companywide quality control
- B. Strategic quality management
- C. Total quality management
- D. Total quality control

Antwort: C

#### 452. Frage

The Taylor Company makes products in to S ne 1 and its base is moving toward full computer-assisted design (CAD) systems. Taylor 1s planning to implement a policy requiring product acceptance to be made from CAD drawings resident on the computer system. However, the Ward Company, an important customer of Taylor. has a written policy requiring suppliers to use paper drawings for product acceptance. Which of the following actions should Taylor take to be cost-effective and sensitive to Ward's requirement?

- A. Implement the CAD acceptance system and discuss with marketing how to change Ward's position.
- B. Delay implementing the CAD acceptance system until Ward changes its requirement
- C. Implement the CAD acceptance system and make exception for individual customer as needed
- D. Implement a dual-design media acceptance system

Antwort: C

Begründung:

In situations where a company is transitioning to a new system that conflicts with the requirements of a key customer, it is often most cost-effective and customer-sensitive to implement the new system while making exceptions for customers as needed. This allows the company to move forward with its plans and modernize its processes while still accommodating important client relationships. In this case, Taylor Company can proceed with the CAD system, which represents the future direction of design and manufacturing, while respecting Ward Company's current policy by providing paper drawings for product acceptance.
