Therefore, it is indispensable to choose a trusted website for real SCP-NPM dumps. Pass4sureCert is one of the most reliable platforms to get actual SCP-NPM dumps. It offers the latest and valid real SolarWinds Network Performance Monitor (NPM) Exam (SCP-NPM) exam dumps. The product of Pass4sureCert is available in SolarWinds SCP-NPM PDF, desktop SCP-NPM practice exam software, and web-based SolarWinds Network Performance Monitor (NPM) Exam practice test.

With the development of computer hi-tech, the computer application is widely used in recent years. The demand of the higher position about computer is increasing. SCP-NPM exam vce files help people who are interested in SolarWinds company. If you have a useful certification, you will have outstanding advantage over other applicants while interviewing. Our SCP-NPM Exam Vce files help you go through examination and get certifications.

**Updated SCP-NPM Latest Test Testking and Practical SCP-NPM Exam
Braindumps & Correct SolarWinds Network Performance Monitor (NPM)**

Exam Test Practice

This age changes quickly, so we can't be passively, we should be actively to follow the age. When you choose to participate in SCP-NPM exam, you are proved to be an active person who wants better development opportunities for yourself. Our Pass4sureCert is willing to help those active people like you to achieve their goals. The most comprehensive and Latest SCP-NPM Exam Materials provided by us can meet all your need to prepare for SCP-NPM exam.

SolarWinds Network Performance Monitor (NPM) Exam Sample Questions (Q44-Q49):

NEW QUESTION # 44

How many days of data must your database contain in order to see Capacity Forecast Charts in NPM?

- A. 3 Days
- **B. 7 Days**
- C. 1 Day
- D. 5 Days

Answer: B

NEW QUESTION # 45

You inherit an environment with NPM and begin to receive High Traffic Utilization alerts from interfaces. When you view the alert, the issue is resolved. How do you modify NPM to receive fewer false alerts?

- A. Configure the alert so that it resets only when traffic utilization remains high for a sustained period
- B. Configure the alert so that it triggers only when traffic utilization remains high for a sustained period
- C. Increase the status polling frequency on the problematic interfaces
- **D. Increase the statistics polling frequency on the problematic interfaces**

Answer: D

NEW QUESTION # 46

You configure an alert to send you an email when you have a high CPU load on your devices. Your NPM web console shows several devices have high CPU utilization, but you have not received any emails. What could be the issue?

- A. The hardware resources assigned to the system are too low
- B. The alert threshold is set too high
- C. SNMP is not configured on the devices
- **D. The alerts are muted on the devices**

Answer: D

NEW QUESTION # 47

Status, Average Response Time, and Packet Loss are the only node details data you can view for your switch A device. The node details of your identical switch B device show Status, Average Response Time, and Packet Loss and other statistics. How can you monitor the other statistics on switch A and not lose any historical data?

- A. Edit the node properties of switch A and change the polling method to "Status Only: ICMP"
- B. Delete switch A, and then add it again and this time choose "Most Devices: SNMP and ICMP" as the polling method
- C. Add switch A again without deleting it first, and this time choose "Most Devices: SNMP and ICMP" as the polling method
- D. Edit the node properties of switch B and change the polling method to "Status Only: ICMP"
- **E. Edit the node properties of switch A and change the polling method to "Most Devices: SNMP and ICMP"**

Answer: E

Explanation:

According to the SolarWinds NPM Administrator Guide, you can edit the node properties of any device and change the polling

method to suit your needs. The polling method determines what data is collected and displayed for the node. The "Most Devices: SNMP and ICMP" polling method collects and displays the most comprehensive data, including CPU load, memory utilization, interface statistics, and more. The "Status Only: ICMP" polling method only collects and displays the node status, average response time, and packet loss. If you want to monitor the other statistics on switch A, you should change the polling method to "Most Devices: SNMP and ICMP". This will not affect the historical data that has already been collected for switch A, as it will be stored in the database. However, deleting switch A and adding it again, or adding switch A again without deleting it first, will result in losing the historical data or creating duplicate nodes. Reference: SolarWinds NPM Administrator Guide, page 78-79; Polling methods used by Orion

NEW QUESTION # 48

How can you extend NPM's monitoring to non-standard devices?

- A. Combining licenses from different products
- B. Polling with non-standard protocols
- C. Using OIDs organized in MIBs
- D. Deploying Orion agents

Answer: C

Explanation:

NPM can monitor a wide range of network devices and infrastructure, including routers, switches, firewalls, servers, and virtual machines. However, some devices may not support standard protocols such as SNMP or WMI, or may have specific metrics that are not monitored out-of-the box by NPM. In such cases, you can extend NPM's monitoring to non-standard devices by using object identifiers (OIDs) organized in management information bases (MIBs). OIDs are numeric strings that uniquely identify a variable in a MIB.

MIBs are hierarchical databases that define the properties and values of the variables that can be monitored on a device. By importing device-specific MIBs into the SolarWinds MIB Database, and creating custom pollers based on OIDs from the MIBs, you can monitor any metric that is available on the device. You can also display the polled data in the web console using dedicated or existing resources¹². References:
