Cisco Designing Cisco Security Infrastructure Sample Questions (Q10-Q15):

NEW QUESTION # 10

A global hotel chain is using Cisco ISE and Cisco switches to manage the network. The hotel company wants to enhance network security by segmenting users and endpoints. The company must ensure that devices within the same VLAN cannot communicate with each other. The goal is to prevent cross-communication without the use of dynamic access control lists. Which action must be taken using Cisco ISE to meet the requirement?

- A. Implement device posturing.
- B. Set up endpoint profiling.
- C. Enable identity groups.
- **D. Configure TrustSec.**

Answer: D

Explanation:

Cisco TrustSec provides software-defined segmentation by assigning Security Group Tags (SGTs) to users and devices. This allows policy enforcement that prevents communication between devices in the same VLAN without needing dynamic ACLs. It is the correct approach to achieve secure segmentation in this scenario.

NEW QUESTION # 11

Which two approaches support secure communication in containerized microservices architectures? (Choose two.)

- **A. Mutual TLS between services**
- B. Static NAT entries
- C. Shared service account credentials
- **D. Service Mesh with policy enforcement**

Answer: A,D

Explanation:

Mutual TLS (mTLS) provides encrypted communication and mutual authentication between services. A service mesh enforces centralized security policies and automates secure communication across microservices.

NEW QUESTION # 12

Employees in a healthcare organization could not access their devices when they returned to work after the weekend. The security team discovered that a threat actor had encrypted the devices. Which security solution would mitigate the risk in future?

- A. network configuration management
- **B. endpoint detection and response**
- C. data loss prevention
- D. password policy enforcement

Answer: B

Explanation:

Endpoint Detection and Response (EDR) provides continuous monitoring, detection, and automated response to suspicious activity on devices. It can identify and stop ransomware attacks before encryption occurs, mitigating the risk of device lockouts in the future.

NEW QUESTION # 13

Which two best practices align with incident response and compliance objectives? (Choose two.)

- A. Use shared admin credentials
- **B. Implement real-time monitoring**
- **C. Maintain immutable logs**
- D. Disable auditing to improve performance

Answer: B,C

Explanation:

Immutable logs preserve evidence integrity, while real-time monitoring allows faster detection and response-both essential for incident response and regulatory compliance.

NEW QUESTION # 14

A manufacturing company recently experienced a network-down scenario due to malware spread on the management network. The company wants to implement a solution to detect and mitigate a similar threat in the future and protect the overall network. Which solution meets the requirements?

- **A. endpoint detection and response**
- B. IPsec VPN
- C. RADIUS
- D. encrypted threat analysis

Answer: A

Explanation:

Endpoint Detection and Response (EDR) provides continuous monitoring, detection, and automated mitigation of malware at the endpoint level. By stopping threats before they spread across the management network, EDR protects the overall infrastructure from similar network- down scenarios in the future.
