Salesforce Mule-Dev-301 Valid Braindumps Pdf | Well Mule-Dev-301 Prep

The ActualTorrent is committed from the day first to ace the Salesforce Certified MuleSoft Developer II (Mule-Dev-301) exam questions preparation at any cost. To achieve this objective ActualTorrent has hired a team of experienced and qualified Salesforce Mule-Dev-301 certification exam experts. They utilize all their expertise to offer top-notch Salesforce Certified MuleSoft Developer II (Mule-Dev-301) exam dumps. These Mule-Dev-301 exam questions are being offered in three different but easy-to-use formats.

Salesforce Certified MuleSoft Developer II Sample Questions (Q21-Q26):

NEW QUESTION # 21

Which configurations are required for HTTP Listener to enable mTLS authentication?

- A. Set an appropriate keystore configuration and use persistent connections for the listener
- **B. Set an appropriate keystore and truststore configuration for the listener**
- C. Set an appropriate reconnection strategy and use persistent connections for the listener
- D. Set an appropriate truststore configuration and reconnection strategy for the listener

Answer: B

Explanation:

To enable mTLS authentication for HTTP Listener, the developer needs to set an appropriate keystore and truststore configuration for the listener. The keystore contains the certificate and private key of the Mule application that are used to prove its identity to clients. The truststore contains the certificates of trusted clients that are allowed to access the Mule application. Reference: <https://docs.mulesoft.com/mule-runtime/4.3/tls-configuration#mutual-authentication>

NEW QUESTION # 22

A custom policy needs to be developed to intercept all outbound HTTP requests made by Mule applications. Which XML element must be used to intercept outbound HTTP requests?

- A. http-policy:processor
- **B. http-policy:source**
- C. http-policy:operation
- D. It is not possible to intercept outgoing HTTP requests, only inbound requests

Answer: B

Explanation:

The http-policy:processor element is used to intercept outbound HTTP requests made by Mule applications. It allows customizing the request before it is sent to the target API and modifying the response after it is received from the target API. Reference: <https://docs.mulesoft.com/api-manager/2.x/policy-mule4-custom-policy#policy-xml-file>

NEW QUESTION # 23

Which statement is true when working with correlation IDs?

- **A. The HTTP Listener generates correlation IDs unless a correlation ID is received in the HTTP request**
- B. The HTTP Listener regenerates correlation IDs regardless of the HTTP request
- C. The VM Connector does not automatically propagate correlation IDs
- D. The Anypoint MQ Connector automatically propagates correlation IDs

Answer: A

Explanation:

When working with correlation IDs, the HTTP Listener generates correlation IDs unless a correlation ID is received in the HTTP request. In that case, it propagates the received correlation ID throughout the flow execution. Correlation IDs are used to track events across different flows or applications. Reference: <https://docs.mulesoft.com/mule-runtime/4.3/about-mule-message#message-attributes>

NEW QUESTION # 24

Which command is used to convert a JKS keystore to PKCS12?

- A. Keytool-importkeystore -srckeystore keystore jks-srcstoretype JKS -destkeystore keystore.p13 -deststoretype PKCS12
- B. Keytool-importkeystore -srckeystore keystore p12-srcstoretype PKCS12 -destkeystore keystore.jks -deststoretype JKS
- **C. Keytool-importkeystore -srckeystore keystore p12-srcstoretype JKS -destkeystore keystore.p12 -deststoretype PKCS12**
- D. Keytool-importkeystore -srckeystore keystore jks-srcstoretype PKCS12 -destkeystore keystore.p12 -deststoretype JKS

Answer: C

Explanation:

To convert a JKS keystore to PKCS12, the developer needs to use the `keytool-importkeystore` command with the following options: `-srckeystore keystore.jks -srcstoretype JKS -destkeystore keystore.p12 -deststoretype PKCS12`. This command imports all entries from a source JKS keystore (keystore.jks) into a destination PKCS12 keystore (keystore.p12). Reference: <https://docs.oracle.com/en/java/javase/11/tools/keytool.html#GUID-5990A2E4-78E3-47B7-AE75-6D1826259549>

NEW QUESTION # 25

A Mule application deployed to multiple Cloudhub 2.0 replicas needs to temporarily persist large files over 10MB between flow executions, and routinely needs to query whether the file data exists on separate executions.

How can this be achieved?

- A. Store the key and full contents of the file, caching the filename and location between requests
- B. Use an in-memory Object Store
- C. Store the key and full contents of the file in an Object Store
- **D. Store the contents of the file on separate storage, and store the key and location of the file Object using Object Store v2**

Answer: D

Explanation:

To temporarily persist large files over 10MB between flow executions, and routinely query whether the file data exists on separate executions, the developer should store the contents of the file on separate storage, and store the key and location of the file object using Object Store v2. This way, the developer can avoid storing large files in memory or exceeding the size limit of Object Store v2 (10MB per object). The developer can also use Object Store v2 operations to query, retrieve, or delete the file object by its key. Reference: <https://docs.mulesoft.com/object-store/osv2-faq#can-i-store-files-in-object-store-v2>

NEW QUESTION # 26

.....

Salesforce Mule-Dev-301 learning materials are new but increasingly popular choices these days which incorporate the newest information and the most professional knowledge of the practice exam. All points of questions required are compiled into our Salesforce Certified MuleSoft Developer II Mule-Dev-301 Preparation quiz by experts. By the way, the Mule-Dev-301 certificate is of great importance for your future and education.
