Amazon AWS Certified Developer Associate Exam (DVA-C02) Sample Questions (Q304-Q309):

NEW QUESTION # 304

Which header received at the EC2 instance identifies the port used by the client while requesting ELB?

- A. X-Requested-Port
- B. X-Forwarded-Proto
- **C. X-Forwarded-Port**
- D. X-Requested-Proto

Answer: C

Explanation:

The X-Forwarded-Port request header helps the user identify the port used by the client while sending a request to ELB.

NEW QUESTION # 305

Which of the following is chosen as the default region when making an API call with an AWS SDK?

- A. ap-northeast-1
- B. us-west-2
- C. eu-west-1
- **D. us-east-1**
- E. us-central-1

Answer: D

Explanation:

Explanation

<https://docs.aws.amazon.com/sdk-for-java/v1/developer-guide/java-dg-region-selection.html>. This section applies only when using a client builder to access AWS services. AWS clients created by using the client constructor will not automatically determine region from the environment and will, instead, use the default SDK region (USEast1).

NEW QUESTION # 306

A company stores all personally identifiable information (PII) in an Amazon DynamoDB table named PII in Account A. An application running on Amazon EC2 instances in Account B requires access to the PII table. An administrator in Account A created an IAM role named AccessPII with privileges to access the PII table, and made Account B a trusted entity.

Which combination of additional steps should developers take to access the table? (Choose two.)

- A. Ask an administrator in Account B to allow the EC2 IAM role permission to assume the AccessPII role with predefined service control policies.
- B. Include the AssumeRole API in the application code logic to obtain credentials to access the PII table.
- **C. Ask an administrator in Account A to allow the EC2 IAM role permission to assume the AccessPII role with predefined service control policies.**
- D. Ask an administrator in Account B to allow the EC2 IAM role permission to assume the AccessPII role.
- **E. Include the GetSessionToken API in the application code logic to obtain credentials to access the PII table.**

Answer: C,E

NEW QUESTION # 307

An Amazon DynamoDB table uses a Global Secondary Index (GSI) to support read queries. The primary table is write-heavy, whereas the GSI is used for read operations. Looking at Amazon CloudWatch metrics, the Developer notices that write operations to the primary table are throttled frequently under heavy write activity.

However, write capacity units to the primary table are available and not fully consumed.

Why is the table being throttled?

- A. Amazon DynamoDB Streams is not enabled on the table
- B. There are not enough read capacity units on the primary table
- C. A large write operation is being performed against another table
- **D. The GSI write capacity units are underprovisioned**

Answer: D

Explanation:

NEW QUESTION # 308

A nightly batch job loads 1 million new records into a DynamoDB table. The records are only needed for one hour, and the table needs to be empty by the next night's batch job.

Which is the MOST efficient and cost-effective method to provide an empty table?

- A. Use `BatchWriteItem` to empty all of the rows.
- B. Create and then delete the table after the task has completed.
- C. Use `DeleteItem` using a `ConditionExpression`.
- D. Write a recursive function that scans and calls out `DeleteItem`.

Answer: C
