## Reliable XK0-005 Braindumps Questions | High Pass-Rate XK0-005 Trustworthy Dumps: CompTIA Linux+ Certification Exam

As practice makes perfect, we offer three different formats of CompTIA XK0-005 exam study material to practice and prepare for the CompTIA Linux+ Certification Exam (XK0-005) exam. Our CompTIA XK0-005 practice test simulates the real XK0-005 exam and helps applicants kill exam anxiety. These XK0-005 practice exams provide candidates with an accurate assessment of their readiness for the XK0-005 test.

### CompTIA Linux+ Certification Exam Sample Questions (Q584-Q589):

#### NEW QUESTION # 584

A Linux system is failing to boot with the following error:

Which of the following actions will resolve this issue? (Choose two.)

- A. Interrupt the boot process in the GRUB menu and add rescue to the kernel line.
- **B. Execute grub-install /dev/sdX and reboot.**
- C. Execute grub-install --root-directory=/mnt and reboot.
- D. Interrupt the boot process in the GRUB menu and add single to the kernel line.
- **E. Boot the system on a LiveCD/ISO.**
- F. Fix the partition modifying /etc/default/grub and reboot.

**Answer: B,E**

Explanation:

Explanation

The administrator should do the following two actions to resolve the issue:

Boot the system on a LiveCD/ISO. This is necessary to access the system and repair the boot loader. A LiveCD/ISO is a bootable media that contains a Linux distribution that can run without installation. The administrator can boot the system from the LiveCD/ISO and mount the root partition of the system to a temporary directory, such as /mnt.

Execute grub-install /dev/sdX and reboot. This will reinstall the GRUB boot loader to the disk device, where sdX is the device name of the disk, such as sda or sdb. The GRUB boot loader is a program that runs when the system is powered on and allows the user to choose which operating system or kernel to boot. The issue is caused by a corrupted or missing GRUB boot loader, which prevents the system from booting. The command grub-install will restore the GRUB boot loader and fix the issue.

The other options are incorrect because they either do not fix the boot loader (interrupt the boot process in the GRUB menu or fix the partition modifying /etc/default/grub) or do not use the correct syntax (grub-install

--root-directory=/mnt instead of grub-install /dev/sdX or rescue or single instead of recovery in the GRUB menu). References: CompTIA Linux+ (XK0-005) Certification Study Guide, Chapter 8: Managing the Linux Boot Process, pages 265-266.

#### NEW QUESTION # 585

In which of the following filesystems are system logs commonly stored?

- A. /opt
- B. /etc
- **C. /var**
- D. /tmp

**Answer: C**

#### NEW QUESTION # 586

What information can the lspci command display about the system hardware? (Choose THREE correct answers.)

- **A. PCI bus speed**
- B. System battery type
- **C. Device vendor identification**
- D. Ethernet MAC address
- **E. Device IRQ settings**

**Answer: A,C,E**

#### NEW QUESTION # 587

A systems administrator created a web server for the company and is required to add a tag for the API so end users can connect.

Which of the following would the administrator do to complete this requirement?

- **A. hostnamectl set-hostname Comptia-WebNode -H root@192.168.2.14**
- B. hostnamectl set-hostname Comptia-WebNode --transient
- C. hostnamectl set-hostname "\$(perl -le "print" "A" x 86)"
- D. hostnamectl status --no-ask-password

**Answer: A**

Explanation:

Explanation

The command `hostnamectl set-hostname Comptia-WebNode -H root@192.168.2.14` sets the hostname of the web server to Comptia-WebNode and connects to the server using the SSH protocol and the root user. This is the correct way to complete the requirement. The other options are incorrect because they either display the current hostname status (`hostnamectl status`), set an invalid hostname (`hostnamectl set-hostname "$(perl -le "print \"A\" x 86)"`), or set a transient hostname that is not persistent (`hostnamectl set-hostname Comptia-WebNode --transient`).

References: CompTIA Linux+ (XK0-005) Certification Study Guide, Chapter 9: Managing System Components, page 291.

### NEW QUESTION # 588

A Linux administrator needs to transfer a local file named `accounts.pdf` to a remote `/tmp` directory of a server with the IP address 10.10.10.80. Which of the following commands needs to be executed to transfer this file?

- A. `scp accounts.pdf user@10.10.10.80:/tmp`
- B. `rsync user@10.10.10.80:/tmp accounts.pdf`
- C. `ssh accounts.pdf user@10.10.10.80:/tmp`
- D. `cp user@10.10.10.80:/tmp accounts.pdf`

**Answer: A**

Explanation:

The best command to use to transfer the local file `accounts.pdf` to the remote `/tmp` directory of the server with the IP address 10.10.10.80 is B. `scp accounts.pdf user@10.10.10.80:/tmp`. This command will use the secure copy protocol (`scp`) to copy the file from the local machine to the remote server over SSH. The command requires the username and password of the user on the remote server, as well as the full path of the destination directory.

### NEW QUESTION # 589

.....

Actually, XK0-005 exam really make you anxious. You may have been suffering from the complex study materials, why not try our XK0-005 exam software of Easy4Engine to ease your burden. Our IT elite finally designs the best XK0-005 exam study materials by collecting the complex questions and analyzing the focal points of the exam over years. Even so, our team still insist to be updated ceaselessly, and during one year after you purchased XK0-005 Exam software, we will immediately inform you once the XK0-005 exam software has any update.
