

Hot PVIP Questions, PVIP Valid Examcollection

What's more, part of that PDFDumps PVIP dumps now are free: <https://drive.google.com/open?id=18BnHrVZIVHwwHMBDoZLskBawEVDRsbAp>

You may be given the NABCEP PVIP practice exam results as soon as they have been saved in the software. PDFDumps modified NABCEP PVIP exam dumps allow students to learn effectively about the real NABCEP PVIP Certification Exam. NABCEP PVIP practice exam software allows students to review and refine skills in a preceding test setting.

Achieving the NABCEP PVIP Board Certification is a significant accomplishment and demonstrates a high level of expertise and professionalism in the field of solar PV installation. PV Installation Professional (PVIP) Board Certification certification is recognized by the industry and is often a requirement for many solar installation jobs. It also provides a competitive advantage for individuals seeking employment in the renewable energy industry.

The PVIP certification exam covers a wide range of topics related to PV design, installation, commissioning, and maintenance. PVIP exam consists of 100 multiple-choice questions and is administered online. The passing score for the exam is 70%, and the certification is valid for three years.

NABCEP PV Installation Professional (PVIP) Board Certification Exam is an essential step for those looking to establish their expertise in the solar energy industry. It provides a rigorous evaluation of knowledge and skills in designing, installing, and maintaining solar PV systems, and is recognized throughout the industry as a mark of excellence. Earning the certification can lead to increased job opportunities and higher salaries, and demonstrates a commitment to quality and safety in the design and installation of solar PV systems.

Excellent Hot PVIP Questions & Leading Offer in Qualification Exams & Fast Download NABCEP PV Installation Professional (PVIP) Board Certification

Our PVIP exam materials are the product of this era, which conforms to the development trend of the whole era. It seems that we have been in a state of study and examination since we can remember, and we have experienced countless tests. In the process of job hunting, we are always asked what are the achievements and what certificates have we obtained? Therefore, we get the test

PVIP Certification and obtain the qualification certificate to become a quantitative standard, and our PVIP learning guide can help you to prove yourself the fastest in a very short period of time.

NABCEP PV Installation Professional (PVIP) Board Certification Sample Questions (Q113-Q118):

NEW QUESTION # 113

A PV connection is being made at the center of a 300 ft. long 200 feeder. See the attack diagram. The feeder originates in the upper third of the 800A main service panel (800A main breaker) with a 200A breaker and terminates in a 200A main-lug-only subpanel. The rated output of the PV system inverter is 100A.

Which are the MINIMUM actions required to achieve an NEC-compliant installation?

- A. Install a 200A breaker at the PV source connection point on the portion of the feeder toward the subpanel, maintain the capacity of the entire feeder, and move the 200A breaker to the bottom of the main service panel, away from the 800A main breaker.
- B. Install a 325A breaker at the PV source connection point on the portion of the feeder toward the subpanel. Increase the capacity of the feeder from the main panel board to 325A breaker to the bottom of the main service panel, away from the 800 main breaker.
- C. Install a 200A breaker at the PV source connection point on the portion on the portion of the feeder toward the subpanel and move the 200A breaker to the top of the main service panel, adjust to the 800A main breaker.
- D. Install a 325A at the PV source connection point on the portion of the feeder toward the subpanel, increase the capacity of this portion of the feeder to 325A, add a 200A main breaker to the subpanel, and move the 200A breaker to bottom of the main service panel, away from the 800A main breaker.

Answer: B

NEW QUESTION # 114

A PV system installation utilizes micro inverters connected to each module of the array. Each micro inverter has a nominal rated output of 250WV. Single phase. The microinverters are listed so that multiple inverters may be connected in parallel to a single feeder circuit, and each inverter has ancable and connector rated for 30A. What is the MAXIMUM number of inverters that may be wired together on a single 30A feeder circuit?

- A. 0
- B. 1
- C. 2
- D. 3

Answer: C

NEW QUESTION # 115

A PV array's tilt is 30° at a latitude of 40°N. What is the winter energy loss compared to optimal tilt?

- A. 20-25%
- B. 15-20%
- C. 5-10%
- **D. 10-15%**

Answer: D

NEW QUESTION # 116

A PV array is installed at a site with an annual average temperature of 25°C and a maximum recorded temperature of 45°C. The module Voc is 50V at STC, with a temperature coefficient of -0.32%/°C. What is the maximum string voltage at the coldest expected temperature of -10°C?

- A. 600V
- B. 560V
- **C. 580V**
- D. 540V

Answer: C

NEW QUESTION # 117

A PV connection is being made at the center of a 300 ft. long 200 feeder. See the attached diagram. The feeder originates in the upper third of the 800A main service panel (800A main breaker) with a 200A breaker and terminates in a 200A main-lug-only subpanel. The rated output of the PV system inverter is 100A.

Which are the MINIMUM actions required to achieve an NEC-compliant installation?

- A. Install a 200A breaker at the PV source connection point on the portion of the feeder toward the subpanel, maintain the capacity of the entire feeder, and move the 200A breaker to the bottom of the main service panel, away from the 800A main breaker.
- **B. Install a 325A breaker at the PV source connection point on the portion of the feeder toward the subpanel. Increase the capacity of the feeder from the main panel board to 325A breaker to the bottom of the main service panel, away from the 800 main breaker.**
- C. Install a 200A breaker at the PV source connection point on the portion on the portion of the feeder toward the subpanel and move the 200A breaker to the top of the main service panel, adjust to the 800A main breaker.
- D. Install a 325A at the PV source connection point on the portion of the feeder toward the subpanel, increase the capacity of this portion of the feeder to 325A, add a 200A main breaker to the subpanel, and move the 200A breaker to bottom of the main service panel, away from the 800A main breaker.

Answer: B
