HPE7-A01 Valid Braindumps Questions & HPE7-A01 Guaranteed Questions Answers

With online test engine, you will feel the atmosphere of HP valid test. You can set limit-time when you do the HPE7-A01 test questions so that you can control your time in HPE7-A01 practice exam. Online version can point out your mistakes and remind you to practice it every day. What's more, you can practice HPE7-A01 Pdf Torrent anywhere and anytime.

HPE7-A01 certification exam is a computer-based exam that consists of 60 multiple-choice questions. Candidates are given two hours to complete the exam, and a passing score of 75% is required to earn the certification. HPE7-A01 Exam is available in several languages, including English, Japanese, Simplified Chinese, and Korean.

HP Aruba Certified Campus Access Professional Exam Sample Questions (Q42-Q47):

NEW QUESTION # 42

Which network components communicate using the RADIUS protocol for authentication and accounting?

- A. a Network Access Server and a RADIUS authentication server
- B. an endpoint device and a RADIUS authentication server
- C. an access point and the endpoint device
- D. a Network Access Server and an endpoint device

Answer: A

Explanation:

The RADIUS protocol is used between a Network Access Server (NAS) - such as a switch, wireless controller, or VPN gateway - and a RADIUS authentication server for user authentication and accounting. The endpoint device communicates with the NAS, which then relays authentication requests to the RADIUS server.

NEW QUESTION # 43

A customer has a site with 200 AP-515 access points 75AP-565 access points installed. The customer is rolling out new mobile phones with Wi-Fi-calling. 802.1X is in use for authentication What should be enabled to ensure the best roaming experience?

- A. 802.11W
- B. 802.11r
- C. 802.1X
- D. 802.11h

Answer: B

Explanation:

1: <https://www.howtogeek.com/794724/what-is-wi-fi-calling/>

2: <https://www.networkcomputing.com/networking/your-network-optimized-wifi-calling>

3: https://www.arubanetworks.com/techdocs/AOS-CX/10.10/HTML/monitoring_6300-6400/Content/Chp_LEDs/fro-pan-led-630.htm

NEW QUESTION # 44

A company recently upgraded its campus switching infrastructure with Aruba 6300 CX switches. They have implemented 802.1X authentication on edge ports where laptop and IoT devices typically connect.

An administrator has noticed that for PoE devices the ports are delivering the maximum wattage instead of what the device actually needs Upon connecting the IoT devices, the devices request their specific required wattage through information exchange

- A. Enable AAA authentication to exempt LLDP and/or CDP information
- B. Globally enable the QoS trust setting for LLDP and/or CDP
- C. implement a classifier policy with the correct power definitions.
- D. Create device profiles with the correct power definitions.
- E. Concerned about this waste of electricity, what should the administrator implement to solve this problem?

Answer: D

Explanation:

According to the Aruba Documentation Portall, the Aruba 6300 CX switches support various features to control the PoE devices on specific ports, such as device profiles and classifier policies. These features can help reduce the power consumption and improve the performance of the PoE devices.

NEW QUESTION # 45

Which feature allows the device to remain operational when a remote link failure occurs between a Gateway cluster and a RADIUS server that is either in the cloud or a datacenter?

- A. MAC Authentication
- B. MAC caching
- C. Opportunistic key caching
- **D. Authentication survivability**

Answer: D

Explanation:

Authentication survivability is a feature that allows the device to remain operational when a remote link failure occurs between a Gateway cluster and a RADIUS server that is either in the cloud or a datacenter. Authentication survivability enables the Gateway cluster to cache successful authentication requests from the RADIUS server and use them to authenticate clients when the RADIUS server is unreachable. Authentication survivability also allows clients to use MAC caching or MAC authentication bypass (MAB) methods to access the network when the RADIUS server is down. Reference:

NEW QUESTION # 46

What is an Aruba-recommended best practice for hardening that only applies to Aruba CX 6300 series switches with dedicated management ports?

- A. Disable all management services on the default VRF.
- **B. Create a dedicated management VRF, and assign the management port to it.**
- C. Implement a control plane ACL to limit access to approved IPs and/or subnets
- D. Manually enable Enhanced Security Mode from a console session.

Answer: B

Explanation:

This is an Aruba-recommended best practice for hardening that only applies to Aruba CX 6300 series switches with dedicated management ports. A dedicated management port is a physical port that is used exclusively for out-of-band management access to the switch. A dedicated management VRF is a virtual routing and forwarding instance that isolates the management traffic from other traffic on the switch. By creating a dedicated management VRF and assigning the management port to it, the administrator can enhance the security and performance of the management access to the switch. The other options are incorrect because they either do not apply to switches with dedicated management ports or do not follow Aruba-recommended best practices. References:
