Our Process-Automation qualification test can help you make full use of the time and resources to absorb knowledge and information. If you are accustomed to using the printed version of the material, we have a PDF version of the Process-Automation study tool for you to download and print, so that you can view the learning materials as long as you have free time. If you choose to study online, we have an assessment system that will make an assessment based on your learning of the Process-Automation qualification test to help you identify weaknesses so that you can understand your own defects of knowledge and develop a dedicated learning plan. Moreover our Process-Automation test guides provide customers with supplement service-

mock test, which can totally inspire them to study hard and check for defects during their learning process. Our commitment is not frank, as long as you choose our Process-Automation study tool you will truly appreciate the benefits of our products.

Salesforce Process Automation Accredited Professional Exam covers a broad range of topics related to process automation on the Salesforce platform. These topics include the basics of process automation, designing and building workflows, creating and managing approval processes, designing and building flows, and troubleshooting and debugging automation. Process-Automation Exam also covers best practices for process automation and how to use automation to improve business processes and increase productivity.

Salesforce Process Automation Accredited Professional Sample Questions (Q162-Q167):

NEW QUESTION # 162

Which three statements are correct regarding Flow Interviews?

- A. Any flow interviews not in use should be deleted so that the user's pending list includes only interviews they still plan to act on.
- B. A single flow can have up to 50 different versions.
- C. Only those flow interviews can be deactivated that have been paused at least once.
- D. A flow interview always runs a single instance of a flow.
- E. Users can navigate through a flow through the browser's Back or Forward buttons.

Answer: A,B,D

NEW QUESTION # 163

Northern Trail Outfitters (NTO) is looking to build an app for its logistics team where users will be able to submit inventory refill requests. The current manual process involves filling out a long form containing many fields. NTO is planning to replace the current process with Flows. Users frequently change field values as they are filling out the form. What should NTO keep in mind about letting users go backward in the Flow to make updates to field values?

- A. "Allow Navigation" needs to be set to TRUE on the Flow.
- B. Only users with "Navigate Flows" permission can navigate to previous screens.
- C. Once the user navigates to a previous screen, all field values on the current screen will be lost and will need to be repopulated.
- D. Letting users navigate from a later screen to a previous screen could result in duplicates.

Answer: C

NEW QUESTION # 164

What does the debug option in Flow Builder allow an administrator to do?

- A. Version a Flow that can be saved as current version after the Flow has run.
- B. Roll back to previously executed actions, callouts, and changes committed to the database.
- C. Run the most recent saved version of the flow with auto-save mode turned OFF.
- D. Enter custom values for input variable and view step-wise details.

Answer: B

NEW QUESTION # 165

Which three main categories can Flow elements be broken down into?

- A. Logic, actions, and connectors.
- B. Variables, choices, and stages.
- C. Guided visual processes, behind-the-scenes automation, and approval automations.
- D. Screen, logic, and actions.

Answer: D

Explanation:

In Salesforce Flow Builder, flow elements are broadly categorized into three functional types:

Screen elements - Capture user input (e.g., screens, display text, choice inputs) Logic elements - Direct the flow (e.g., Decision, Assignment, Loop) Action elements - Interact with Salesforce or external systems (e.g., Create Record, Send Email, Subflow)

Correct Option:

B). # Screen, logic, and actions

Incorrect Options:

A). Not official categories of Flow elements.

C). "Connectors" are how elements are linked, but not a category of elements.

D). Variables and choices are resources, not flow elements.

Reference Extracts from Salesforce Help - Flow Element Reference:

"Flow elements fall into categories such as Screen (UI), Logic (routing), and Actions (system interaction)."

NEW QUESTION # 166

What should be avoided inside a loop?

- A. Displaying data to the user.
- **B. Executing actions, such as creating or updating records.**
- C. Nesting another loop.
- D. Assigning new values to variables.

Answer: B

Explanation:

Executing DML actions like Create, Update, or Delete Records inside a loop should be avoided due to governor limits (e.g., DML limit of 150 per transaction). Instead, store records in a collection and perform bulk operations after the loop.

B). Correct - Executing DML inside loops risks hitting limits and should be avoided.

Incorrect Options:

A). Assigning values is acceptable and common in loops.

C). Screen elements are not used inside loops - but displaying data is not an execution problem itself.

D). While nesting loops is discouraged for performance, the greater risk comes from DML actions inside loops.

Reference Extracts from Salesforce Process Automation Study Guide:

"Avoid performing DML operations inside a loop. Instead, collect records and update them outside the loop."

"Bulkification of actions is a Flow best practice to prevent hitting governor limits."

NEW QUESTION # 167
