GARP Sustainability and Climate Risk Sample Questions (Q90-Q95):

NEW QUESTION # 90

A multinational footwear company prepares its annual GHG inventory. The company sustainability director organizes data according to the GHG Protocol and prepares a set of recommended actions to lower company emissions. Which action is the director most likely to recommend to reduce company Scope 3 emissions?

- A. Upgrade air conditioning and other headquarters equipment to energy-efficiency models.
- **B. Switch to suppliers located closer to textile printing and product finishing facilities.**
- C. Retrofit all existing manufacturing facilities with energy efficient standards.
- D. Replace company vehicles powered by petrol with electric vehicles and plug-in hybrids.

Answer: B

NEW QUESTION # 91

The CRO of an automobile manufacturer in North America prepares a keynote address on risks in the auto sector over the next decade. The CRO highlights the primary technology risks facing its line of internal combustion engine (ICE) vehicles. At approximately what point will many manufacturers of ICE vehicles experience a significant technology risk?

- A. Renewable energy costs fall to USD 0.10 per megawatt hour
- **B. The cost of battery packs falls below USD 100.00 per kilowatt hour**
- C. Renewable energy costs fall to USD 35.00 per megawatt hour
- D. The cost of battery packs falls below USD 0.50 per kilowatt hour

Answer: B

NEW QUESTION # 92

A global commercial bank assesses the potential impact of physical climate risk on its project finance portfolio. The bank will grow the project portfolio and invest heavily in assets with the lowest risk. A bank risk manager examines how physical risk can transmit into the financial performance of portfolio assets. How should the risk manager evaluate these assets?

- **A. Identify how uninsured losses from extreme weather events may increase default risk.**
- B. Respond effectively to the rising cost of complying with international climate regulations.
- C. Assess potential overvaluation of properties in areas currently insulated from extreme weather events.
- D. Develop a plan for the company to diversify its portfolio into renewable energy.

Answer: A

NEW QUESTION # 93

A bank assesses lending portfolio alignment with various climate change scenarios. To assist in this process, the risk team applies the

Paris Agreement Capital Transition Assessment (PACTA) tool to examine transition risk for power generation, automotive, and steel sectors. The team examines different PACTA metrics for each sector based on data availability and sectoral profile. For sectors with no clear zero-carbon pathway, what metric will PACTA employ?

- A. Production volume trajectory
- **B. Emission intensity**
- C. Carbon allocation credit
- D. Technology and fuel mix

Answer: B

NEW QUESTION # 94

An investment analyst assesses climate-related stranded asset risk for a portfolio of energy companies. The analyst develops a list of companies potentially exhibiting stranded asset risk. After a more granular examination, the analyst summarizes corporate activity in the following table:

Company	Activity
Utility	Significant capital investments to switch from coal to lower-cost natural gas.
Oil & Gas	A write-down of the value of assets after forecasting a decline in company oil reserves.
Hydroelectric	Shut down of dam operations before the end of its useful life due to sustained droughts throughout a river basin.
Technology Startup	Reduction of solar panel expansion as the levelized cost of energy for renewables flatlines.

The analyst identifies the company with the highest stranded asset exposure for possible divestment. Which company does the analyst recommend for divestment?

- A. Hydroelectric
- B. Utility
- **C. Technology startup**
- D. Oil & Gas

Answer: C

NEW QUESTION # 95
