

100% Pass Quiz Efficient NetSec-Pro - Palo Alto Networks Network Security Professional Dump Torrent

BONUS!!! Download part of PassTestking NetSec-Pro dumps for free: <https://drive.google.com/open?id=1EYtaBOLYRIviSIYPFx5ephlsQfpmUxtW>

PassTestking insists on providing you with the best and high quality exam dumps, aiming to ensure you 100% pass in the actual test. Being qualified with Palo Alto Networks certification will bring you benefits beyond your expectation. Our NetSec-Pro practice training material will help you to enhance your specialized knowledge and pass your actual test with ease. NetSec-Pro Questions are all checked and verified by our professional experts. Besides, the NetSec-Pro answers are all accurate which ensure the high hit rate.

Palo Alto Networks NetSec-Pro Exam Syllabus Topics:

Topic	Details

Topic 1	<ul style="list-style-type: none"> • NGFW and SASE Solution Functionality: This part assesses the knowledge of firewall administrators and network architects on the functions of various Palo Alto Networks firewalls including Cloud NGFWs, PA-Series, CN-Series, and VM-Series. It covers perimeter and core security, zone security and segmentation, high availability, security and NAT policy implementation, as well as monitoring and logging. Additionally, it includes the functionality of Prisma SD-WAN with WAN optimization, path and NAT policies, zone-based firewall, and monitoring, plus Prisma Access features such as remote user and network configuration, application access, policy enforcement, and logging. It also evaluates options for managing Strata and SASE solutions through Panorama and Strata Cloud Manager.
Topic 2	<ul style="list-style-type: none"> • Connectivity and Security: This part measures the skills of network engineers and security analysts in maintaining and configuring network security across on-premises, cloud, and hybrid environments. It covers network segmentation, security and network policies, monitoring, logging, and certificate management. It also includes maintaining connectivity and security for remote users through remote access solutions, network segmentation, security policy tuning, monitoring, logging, and certificate usage to ensure secure and reliable remote connections.
Topic 3	<ul style="list-style-type: none"> • Infrastructure Management and CDSS: This section tests the abilities of security operations specialists and infrastructure managers in maintaining and configuring Cloud-Delivered Security Services (CDSS) including security policies, profiles, and updates. It includes managing IoT security with device IDs and monitoring, as well as Enterprise Data Loss Prevention and SaaS Security focusing on data encryption, access control, and logging. It also covers maintenance and configuration of Strata Cloud Manager and Panorama for network security environments including supported products, device addition, reporting, and configuration management.
Topic 4	<ul style="list-style-type: none"> • Network Security Fundamentals: This section of the exam measures skills of network security engineers and covers key concepts such as application layer inspection for Strata and SASE products, differentiating between slow and fast path packet inspection, and the use of decryption methods including SSL Forward Proxy, SSL Inbound Inspection, SSH Proxy, and scenarios where no decryption is applied. It also includes applying network hardening techniques like Content-ID, Zero Trust principles, User-ID (including Cloud Identity Engine), Device-ID, and network zoning to enhance security on Strata and SASE platforms.
Topic 5	<ul style="list-style-type: none"> • GFW and SASE Solution Maintenance and Configuration: This domain evaluates the skills of network security administrators in maintaining and configuring Palo Alto Networks hardware firewalls, VM-Series, CN-Series, and Cloud NGFWs. It includes managing security policies, profiles, updates, and upgrades. It also covers adding, configuring, and maintaining Prisma SD-WAN including initial setup, pathing, monitoring, and logging. Maintaining and configuring Prisma Access with security policies, profiles, updates, upgrades, and monitoring is also assessed.

NetSec-Pro Best Practice - NetSec-Pro New Braindumps Sheet

The development of science and technology makes our life more comfortable and convenient, which also brings us more challenges. Many company requests candidates not only have work experiences, but also some professional certifications. Therefore it is necessary to get a professional Palo Alto Networks certification to pave the way for a better future. The NetSec-Pro question and answers produced by our company, is helpful for our customers to pass their NetSec-Pro exams and get the NetSec-Pro certification within several days. Our NetSec-Pro exam questions are your best choice.

Palo Alto Networks Network Security Professional Sample Questions (Q32-Q37):

NEW QUESTION # 32

How many places will a firewall administrator need to create and configure a custom data loss prevention (DLP) profile across Prisma Access and the NGFW?

- A. Three

- B. Two
- C. Four
- **D. One**

Answer: D

Explanation:

Palo Alto Networks' Enterprise DLP uses a centralized DLP profile that can be applied consistently across both Prisma Access and NGFWs using Strata Cloud Manager (SCM). This eliminates the need for duplicating efforts across multiple locations.

Enterprise DLP profiles are created and managed centrally through the Cloud Management Interface and can be used seamlessly across NGFW and Prisma Access deployments.

NEW QUESTION # 33

Which two SSH Proxy decryption profile settings should be configured to enhance the company's security posture? (Choose two.)

- **A. Block sessions when certificate validation fails.**
- B. Allow sessions when decryption resources are unavailable.
- C. Allow sessions with legacy SSH protocol versions.
- **D. Block connections that use non-compliant SSH versions.**

Answer: A,D

Explanation:

Blocking non-compliant SSH versions and failing certificate validations are fundamental security measures:

Block sessions when certificate validation fails

The SSH Proxy profile should block sessions that fail certificate validation to ensure that only trusted hosts are allowed.

Block connections using non-compliant SSH versions

Older SSH versions may have vulnerabilities or lack modern encryption algorithms.

To enforce stronger security, block SSH sessions that use older or deprecated versions of the SSH protocol that do not comply with your security posture.

NEW QUESTION # 34

When configuring Security policies on VM-Series firewalls, which set of actions will ensure the most comprehensive Security policy enforcement?

- A. Configure port-based policies, check threat logs weekly, conduct software updates annually, and enable decryption.
- **B. Configure policies using User-ID and App-ID, enable decryption, apply appropriate security profiles to rules, and update regularly with dynamic updates.**
- C. Configure a block policy for all malicious inbound traffic, configure an allow policy for all outbound traffic, and update regularly with dynamic updates.
- D. Configure all default policies provided by the firewall, use Policy Optimizer, and adjust security rules after an incident occurs.

Answer: B

Explanation:

A comprehensive security approach includes:

* User-ID for identity-based policies

* App-ID for application-based security

* Decryption to inspect encrypted traffic

* Security profiles to enforce protections

* Dynamic updates to ensure up-to-date threat coverage

"For comprehensive security, combine User-ID, App-ID, decryption, and security profiles. Keep the firewall updated with dynamic content updates to maintain the strongest security posture." (Source: Best Practices for Security Policy) This ensures real-time, identity-aware, and application-centric security enforcement.

NEW QUESTION # 35

What occurs when a security profile group named "default" is created on an NGFW?

- A. It only applies to traffic that has been dropped due to the reset client action.
- **B. It is automatically applied to all new security rules.**
- C. It allows traffic to bypass all security checks by default.
- D. It negates all existing security profiles rules on new policy.

Answer: B

Explanation:

A security profile group named "default" is automatically applied to all new security rules unless a specific profile group is explicitly configured.

If a security profile group named 'default' exists, it will be automatically applied to any newly created security policy rules to ensure consistent protection.

This behavior ensures that newly created policies are always protected by default security profiles, minimizing human error.

NEW QUESTION # 36

How do zones enhance security in a Palo Alto NGFW deployment?

- A. By limiting the need for SSL decryption
- B. By enforcing logging for all interfaces
- C. By creating dynamic routing paths
- **D. By segmenting traffic and enabling granular policy enforcement**

Answer: D

Explanation:

Zones in a Palo Alto NGFW are central to network segmentation, allowing administrators to define how traffic flows between different parts of the network. Security policies are enforced based on the source and destination zones, enabling precise control and reducing the attack surface by restricting unnecessary communication between network segments. This approach enhances security by allowing granular policy enforcement tied to logical network segments rather than just interfaces or IP addresses, making it more difficult for threats to move laterally within the environment.

NEW QUESTION # 37

.....

As a hot test of Palo Alto Networks certification, NetSec-Pro practice exam become a difficult task for most candidates. So choosing right study materials is a guarantee success. Our website will be first time to provide you the latest NetSec-Pro Exam Braindumps and test answers to let you be fully prepared to pass NetSec-Pro actual test with 100% guaranteed.
