Topic 4	<ul style="list-style-type: none"> • Leadership for PI Planning: It delves into concepts of Team Kanban, Backlog Refinement, Iteration Review, Iteration Planning, and Iteration Retrospective.

Scrum SAFe Product Owner/Product Manager POPM (6.0) Sample Questions (Q21-Q26):

NEW QUESTION # 21

What are the minimum requirements for a Feature?

- A. Non-functional requirements, data models, and architecture
- B. Acceptance criteria, data models, and priority
- C. Benefit hypothesis, acceptance criteria, and priority
- D. Name, benefit hypothesis, and acceptance criteria

Answer: D

Explanation:

Explanation

The minimum requirements for a feature are a name, a benefit hypothesis, and acceptance criteria¹². A name is a brief and descriptive phrase that summarizes the feature. A benefit hypothesis is a statement that describes the expected outcome and value of the feature for the customer or user. Acceptance criteria are a set of conditions that the feature must satisfy to be accepted by the customer or stakeholder¹².

Some additional information that might be helpful for you are:

*The other options (A, C, and D) are not the minimum requirements for a feature, but rather additional or optional elements that may be included in the feature definition.

*Data models are representations of the data structures and relationships that the feature requires or affects.

Data models are not mandatory for a feature, but they may be useful for complex or data-intensive features³.

*Priority is the relative importance or urgency of a feature compared to other features. Priority is not a requirement for a feature, but it is a factor that influences the feature selection and sequencing⁴.

*Non-functional requirements (NFRs) are system qualities that guide the design of the solution and often serve as constraints across the relevant backlogs. NFRs are not specific to a feature, but they may affect the feature implementation or testing⁵.

*Architecture is the design and structure of the system that supports the solution. Architecture is not a requirement for a feature, but it is an enabler that facilitates the feature delivery.

NEW QUESTION # 22

What is one strategy for managing complex critical path challenges?

- **A. Adjust work between teams or split Features and Stories**
- B. Distribute work to other teams
- C. Allocate work between teams based on forecasted capacity
- D. Sequence work to eliminate same Iteration dependencies

Answer: A

Explanation:

One effective strategy for managing complex critical path challenges in SAFe is to adjust the allocation of work between teams or to split features and stories. This approach allows for more flexibility in managing dependencies and workload distribution, ensuring that teams can adapt to changes and maintain progress on the critical path.

The strategy is aligned with the principles of SAFe, which emphasize decentralization of decision-making and enabling teams to manage their own workloads effectively.

NEW QUESTION # 23

In a 12-week PI, how often does the Innovation and Planning (IP) Iteration occur?

- A. Once per year
- B. Every two PIs
- C. Every two Iterations
- **D. Every quarter**

Answer: D

Explanation:

The Innovation and Planning (IP) Iteration is a unique, dedicated iteration that occurs every Program Increment (PI). A PI is a timebox of 8 to 12 weeks, during which an Agile Release Train (ART) delivers incremental value in the form of working, tested software and systems. Therefore, in a 12-week PI, the IP Iteration occurs every quarter.

NEW QUESTION # 24

What is one input to the Vision?

- **A. Customer feedback**
- B. Team topologies
- C. Portfolio Backlog
- D. Feature context

Answer: A

Explanation:

Explanation

One input to the Vision is customer feedback. Customer feedback is the information and opinions that customers and stakeholders provide about the solution, its features, and its value proposition¹. Customer feedback helps to validate the assumptions, test the hypotheses, and measure the satisfaction of the solution².

Customer feedback also helps to identify the needs, preferences, and expectations of the customers and stakeholders, which are essential for defining and communicating the Vision³. The Vision is a description of the future state of the solution under development, and it reflects the problem(s) that the solution will solve and the benefits that it will deliver⁴.

NEW QUESTION # 25

Which statement describes a mitigated ART PI Risk?

- A. There is a strategy to adjust the plan as necessary
- B. The risk has been addressed and is no longer a concern
- C. Someone has taken the responsibility of the risk
- D. Nothing more can be done, so if a risk occurs, release may be compromised

Answer: A

Explanation:

Explanation

A mitigated ART PI Risk is one that has an agreed-upon plan for alleviation, which may involve changing the scope, schedule, or resources of the PI. This reduces the impact or likelihood of the risk, but does not eliminate it completely
