Our products are officially certified, and Network-Security-Essentials exam materials are definitely the most authoritative product in the industry. In order to ensure the authority of our Network-Security-Essentials practice prep, our company has really taken many measures. First of all, we have a professional team of experts, each of whom has extensive experience. Secondly, before we write Network-Security-Essentials Guide quiz, we collect a large amount of information and we will never miss any information points.

You will be able to experience the real exam scenario by practicing with WatchGuard Network-Security-Essentials practice test questions. As a result, you should be able to pass your WatchGuard Network-Security-Essentials Exam on the first try. WatchGuard Network-Security-Essentials desktop software can be installed on Windows-based PCs only. There is no requirement for an active internet connection.

Passing Network-Security-Essentials Score - Efficient Network-Security-Essentials Reliable Exam Tutorial and First-Grade New Network Security Essentials for Locally-Managed Fireboxes Exam Vce

One strong point of our APP online version is that it is convenient for you to use our Network-Security-Essentials exam dumps even though you are in offline environment. In other words, you can prepare for your Network-Security-Essentials exam with under the guidance of our Network-Security-Essentials Training Materials anywhere at any time. Just take action to purchase we would be pleased to make you the next beneficiary of our Network-Security-Essentials exam practice. Trust us and you will get what you are dreaming!

WatchGuard Network Security Essentials for Locally-Managed Fireboxes Sample Questions (Q11-Q16):

NEW QUESTION # 11

With the policies configured as shown in this image, HTTP traffic can be sent and received through Branch Office VPN tunnel 1 and tunnel 2.

- A. False
- B. True

Answer: B

Explanation:

The image shows firewall policies allowing HTTP traffic through Branch Office VPN (BOVPN) tunnel 1 and tunnel 2:

- * tunnel1-http.outpolicy: Allows HTTP traffic (TCP port 80) from Any source to tunnel 1.
- * tunnel1-http.inpolicy: Allows HTTP traffic from tunnel 1 to Any destination.
- * BOVPN-Allow.out and BOVPN-Allow.in policies: Configured to allow Any traffic between tunnel 2 and tunnel 1 in both directions. These configurations indicate that HTTP traffic is permitted through both tunnels, enabling it to be sent and received across BOVPN tunnels 1 and 2. Thus, users on either end of these VPN tunnels can transmit HTTP traffic successfully.

NEW QUESTION # 12

You routinely ship Fireboxes directly to remote offices without configuring them first. What is the zero-touch deployment method you can use to apply a configuration file after a Firebox arrives at a remote office? (Select one.)

- A. Dimension Command
- B. Firebox Deployment Manager
- C. WatchGuard System Manager
- D. Fireware Web UI
- E. RapidDeploy

Answer: E

Explanation:

When shipping Fireboxes to remote offices without pre-configuration, the RapidDeploy feature is designed to facilitate zero-touch deployment. RapidDeploy enables network administrators to apply a pre-configured setup file after the device arrives at its destination.

* Process of RapidDeploy: Administrators can upload a configuration file to the WatchGuard Cloud or another accessible location, from which the Firebox downloads its initial configuration upon connection. This method ensures that even with remote deployment, the Firebox will automatically configure itself based on predefined settings, eliminating the need for manual on-site setup.

* Advantages: RapidDeploy streamlines setup for large-scale, geographically distributed environments where physical access may be limited. This feature is specifically useful for organizations seeking a scalable, efficient deployment process for devices in remote locations.

NEW QUESTION # 13

When does a network host make an ARP request? (Select one.)

- A. To find the IP address of the default gateway
- B. To find the IP address associated with a MAC address
- C. To find the hostname associated with an IP address
- D. To find the MAC address associated with an IP address
- E. To find the IP address associated with a hostname

Answer: D

Explanation:

The Address Resolution Protocol (ARP) is used to map an IP address to a physical machine (MAC) address on a local network. When a device wants to communicate with another device on the same local network, it uses an ARP request to discover the MAC address associated with a known IP address. The ARP process is essential for IP-based communication within the same network segment.

* Option D is correct because ARP's primary function is to find the MAC address associated with an IP address.

* Other options mention IP addresses or hostnames, which would be resolved using other methods like DNS, not ARP.

NEW QUESTION # 14

Based on the configuration shown in this image, clients on the network can successfully connect to <https://www.watchguard.com>.

- A. False
- B. True

Answer: B

Explanation:

Based on the configuration shown in the image, the HTTPS-proxy-out policy allows traffic from Any- Trusted and Any-

Optional networks to Any-External destination on port 443 (which is the standard port for HTTPS).

This rule effectively permits outbound HTTPS connections from clients within the trusted network to external HTTPS websites, such as <https://www.watchguard.com>.

Since the policy type is HTTPS-proxy, it can inspect and manage HTTPS traffic according to configured policies, but it does not block the connection itself. Therefore, users on the network should be able to successfully connect to external HTTPS sites.

NEW QUESTION # 15

You want to send traffic from the Internet to your internal web server through the Firebox. You see the traffic is allowed in Traffic Monitor, but the web server cannot be reached. You use the TCP Dump Diagnostic Task and collect this information from the Firebox interface connected to the web server.

What could cause the problem? (Select two.)

- A. The IP address of the web server is on the Firebox Blocked Sites list
- B. The web server default gateway is configured incorrectly
- C. The web server has firewall software installed that blocks incoming connections.
- D. The Firebox Dynamic NAT rules are configured incorrectly
- E. The HTTPS proxy is blocking the connection because Gateway AntiVirus detected a virus

Answer: B,C

Explanation:

* Firewall Software Blocking Connections: If the web server has its own firewall software, it may be configured to block incoming connections. This would prevent the server from responding to requests, even if the Firebox is allowing the traffic through.

* Incorrect Default Gateway Configuration: If the web server's default gateway is not correctly set to route through the Firebox, it will be unable to respond to inbound traffic routed from external sources.

This misconfiguration is a common cause of connectivity issues in environments with complex network setups.

These two issues often lead to situations where the Firebox allows traffic, but the destination server is unreachable due to internal configurations.

NEW QUESTION # 16

.....

Owning the ActualTorrent Network-Security-Essentials exam certification training materials is equal to have a bright future, and equal to own the key to success. After you purchase ActualTorrent's Network-Security-Essentials certification exam training materials, we will provide one year free renewal service. If there's any quality problem in Network-Security-Essentials Exam Dumps or you fail Network-Security-Essentials exam certification, we will give a full refund unconditionally.

Network-Security-Essentials Reliable Exam Tutorial: <https://www.actualtorrent.com/Network-Security-Essentials-questions-answers.html>

Network-Security-Essentials: Network Security Essentials for Locally-Managed Fireboxes Preparation Materials can be downloaded and installed in more than 200 computers, WatchGuard Passing Network-Security-Essentials Score Gone the furthest person is who are willing to do it and willing to take risks, WatchGuard Passing Network-Security-Essentials Score Our dedicated service, high quality and passing rate and diversified functions contribute greatly to the high prestige of our products, Passing the exam won't be a problem once you keep practice with our Network-Security-Essentials Reliable Exam Tutorial - Network Security Essentials for Locally-Managed Fireboxes valid practice dumps about 20 to 30 hours.

You still have to ensure that the governance Network-Security-Essentials Online Version plan is applied, Determine the technology and media access control method for Ethernet networks, Network-Security-Essentials: Network Security Essentials for Locally-Managed Fireboxes Preparation Materials can be downloaded and installed in more than 200 computers.

100% Pass Quiz WatchGuard - Reliable Passing Network-Security-Essentials Score

Gone the furthest person is who are willing to do it and willing to take Training Network-Security-Essentials Materials risks, Our dedicated service, high quality and passing rate and diversified functions contribute greatly to the high prestige of our products.

Passing the exam won't be a problem once you keep Network-Security-Essentials practice with our Network Security Essentials for

Locally-Managed Fireboxes valid practice dumps about 20 to 30 hours, ActualTorrent is the number one choice among professionals, especially the Network-Security-Essentials Reliable Exam Tutorial ones who are looking to climb up the hierarchy levels faster in their respective organizations.
