## ISA/IEC 62443 Cybersecurity Fundamentals Specialist Sample Questions (Q93-Q98):

### NEW QUESTION # 93

Which is the PRIMARY objective when defining a security zone?

Available Choices (select all choices that are correct)

- A. All assets in the zone must be from the same vendor.
- B. All assets in the zone must share the same security requirements.
- C. All assets in the zone must be at the same level in the Purdue model.
- D. All assets in the zone must be physically located in the same area.

**Answer: B**

Explanation:

According to the ISA/IEC 62443-3-2 standard, a security zone is a grouping of systems and components based on their functional, logical, and physical relationship that share common security requirements. The primary objective of defining a security zone is to apply a consistent level of protection to the assets within the zone, based on their criticality and risk assessment. A security zone may contain assets from different vendors, different levels in the Purdue model, or different physical locations, as long as they have the same security requirements. A security zone may also be subdivided into subzones, if there are different security requirements within the zone. A conduit is a logical or physical grouping of communication channels connecting two or more zones that share common security requirements.

#### NEW QUESTION # 94

What is the primary purpose of Foundational Requirement 1 (FR 1)?

- A. Respond to security violations.
- B. Control use of selected devices.
- C. Ensure data confidentiality.
- **D. Control access to selected devices.**

**Answer: D**

Explanation:

Foundational Requirement 1 (FR 1) in the ISA/IEC 62443 series is titled "Identification and Authentication Control (IAC)". Its purpose is to control access to selected devices by ensuring that only authenticated and authorized users or systems can interact with critical IACS components.

"FR 1 - Identification and Authentication Control (IAC): This foundational requirement ensures that all users and components interacting with the system are uniquely identified and authenticated before access is granted."

- ISA/IEC 62443-3-3:2013, Clause 4.2.1 - FR 1

This foundational layer supports higher-level security goals like use control, confidentiality, and system integrity.

#### NEW QUESTION # 95

Which of the following is the BEST reason for periodic audits?

Available Choices (select all choices that are correct)

- A. To confirm audit procedures
- **B. To validate that security policies and procedures are performing**
- C. To meet regulations
- D. To adhere to a published or approved schedule

**Answer: B**

Explanation:

Periodic audits are an essential part of the ISA/IEC 62443 cybersecurity standards, as they help to verify the effectiveness and compliance of the security program. According to the ISA/IEC 62443-2-1 standard, periodic audits should be conducted to evaluate the following aspects:

The security policies and procedures are consistent with the security requirements and objectives of the organization  
The security policies and procedures are implemented and enforced in accordance with the security program  
The security policies and procedures are reviewed and updated regularly to reflect changes in the threat landscape, the IACS environment, and the business needs  
The security performance indicators and metrics are measured and reported to the relevant stakeholders  
The security incidents and vulnerabilities are identified, analyzed, and resolved in a timely manner  
The security awareness and training programs are effective and aligned with the security roles and responsibilities of the personnel  
The security audits and assessments are conducted by qualified and independent auditors  
The security audit and assessment results are documented and communicated to the appropriate parties  
The security audit and assessment findings and recommendations are addressed and implemented in a prioritized and systematic way  
Periodic audits are not only a means to meet regulations or adhere to a schedule, but also a way to validate that the security policies and procedures are performing as intended and achieving the desired security outcomes. Periodic

audits also help to identify gaps and weaknesses in the security program and provide opportunities for improvement and enhancement. #### NEW QUESTION # 96

What type of attack is characterized by encrypting an organization's data and demanding payment for restoration?

- A. Malware variant
- B. DDoS attack
- **C. Ransomware**
- D. Phishing

**Answer: C**

Explanation:

Ransomware is a type of malicious software (malware) designed to block access to a computer system or data, typically by encrypting files, until a sum of money (ransom) is paid. This form of attack is increasingly targeting industrial automation and control system (IACS) environments due to the critical nature of these systems. Unlike phishing (which tricks users into revealing sensitive information) or DDoS attacks (which disrupt availability), ransomware specifically encrypts data and extorts the victim.

#### NEW QUESTION # 97

An energy utility company needs to implement cybersecurity controls specifically tailored for industrial control systems. Which standard from the list would be MOST appropriate for their use?

- A. NIST SP 800-53
- **B. ISO/IEC 27019**
- C. IEC PAS
- D. ISO/IEC 27001

**Answer: B**

Explanation:

ISO/IEC 27019 is a sector-specific standard that extends ISO/IEC 27002 controls for use in energy utility control systems, including:

SCADA

Distributed control systems (DCS)

Energy automation systems

"ISO/IEC 27019 provides guidelines based on ISO/IEC 27002 for information security controls applicable to process control systems in the energy utility industry."

- ISO/IEC 27019:2017 - Scope

It is specifically designed for industrial automation within the energy sector, making it the most appropriate choice.
