Not only our Advanced-Administrator Practice Braindumps can help you study the latest knowledge on the subject but also it will help you achieve the certification for sure so that you will get a better career.

Salesforce Certified Advanced Administrator Sample Questions (Q127-Q132):

NEW QUESTION # 127

The support manager at Universal Containers wants a dashboard that shows the number of cases that remain open as of 5:00 p.m. each day.

Which type of report should be used in the dashboard component?

- A. Report based on a reporting snapshot that runs daily at 5:00 p.m.
- B. Custom summary report where unit equals business hours.
- C. Report based on custom report type using cases and business hours.
- D. Standard case lifecycle report where unit equals business hours.

Answer: A

NEW QUESTION # 128

Select power users want the ability to make configuration changes to a specific custom object.

What tool should the administrator assign to the power users to enable this?

- A. Modify All Data
- B. Delegated Administration
- C. View Setup and Configuration
- D. Sharing Rule

Answer: B

Explanation:

Explanation

Delegated Administration is a feature that allows administrators to delegate some administrative tasks to other users without giving them full access to Setup. Delegated administrators can manage users and assign permissions for specific custom objects, tabs, apps, and fields. This can help reduce the workload of the system administrator and empower power users to make configuration changes to a specific custom object.

NEW QUESTION # 129

Universal Containers uses Enterprise Territory Management to assist with the assignment of records. Each territory has only one user assigned. A sales rep converts a lead to an opportunity and the lead owner belongs to the same territory as an account that the opportunity was converted to.

What is the expected assignment of the opportunity?

- A. The opportunity is assigned to the same territory as the account, and the lead owner becomes the opportunity owner. The lead owner is added as an inactive member of the territory.
- B. The opportunity is assigned to the same territory as the account, and the opportunity owner is the sole member of the territory.
- C. The opportunity is assigned to the same territory as the account, and the lead owner becomes the opportunity owner.
- D. The opportunity is assigned to the forecast manager of the territory.

Answer: B

NEW QUESTION # 130

An administrator has found a free app on the AppExchange and would like to install it.

Which three items should the administrator take into consideration before installing the managed package?

Choose 3 answers

- A. Apps may require external, third-party web services to function properly.
- B. Apps may require certain Salesforce editions or features to be enabled.
- C. Apps must be installed in production before the app can be installed in a sandbox.
- D. Managed apps do not undergo a formal security review by Salesforce.
- E. Custom objects and custom fields used by the app count against the org's limits.

Answer: A,B,E

Explanation:

Before installing a managed package from the AppExchange, the administrator should take into consideration several factors, such as:

- * Custom objects and custom fields used by the app count against the org's limits. The administrator should check how many custom objects and fields are available in their org and how many are used by the app.
- * Apps may require certain Salesforce editions or features to be enabled. The administrator should check the app's requirements and compatibility with their org's edition and features.
- * Apps may require external, third-party web services to function properly. The administrator should check if the app integrates with any external services and if they need to set up any authentication or configuration for them.

The other two options are incorrect because:

- * Managed apps do not undergo a formal security review by Salesforce before they are listed on the AppExchange.
- * Apps can be installed in a sandbox before they are installed in production.

NEW QUESTION # 131

Universal Containers uses Salesforce to track job positions and applicants. Applicants can apply for multiple positions, and positions will have multiple applicants. The company wants to ensure that if an applicant is deleted, all associations between applicant and the position(s) that he or she has applied for are removed. How can this be accomplished?

- A. Create a custom object between Applicants and Positions with lookup fields on the junction to both objects
- B. Create a many-to-many relationship using a junction object with both Positions and Applicants as masters
- C. Create a master-detail relationship between Applicants and Positions with Applicants as the master
- D. Create a lookup relationship between Applicants and Positions with Applicants as the parent

Answer: B

NEW QUESTION # 132
