VMware 2V0-32.24 Exam Format & 2V0-32.24 Training Solutions

Every working person knows that 2V0-32.24 is a dominant figure in the field and also helpful for their career. If 2V0-32.24 reliable exam bootcamp helps you pass exams and get a qualification certificate you will obtain a better career even a better life. Our study 2V0-32.24 Guide materials cover most of latest real 2V0-32.24 test questions and answers. If you are certainly determined to make something different in the field, a useful certification will be a stepping-stone for your career, so why not try our product?

VMware Cloud Operations 8.x Professional V2 Sample Questions (Q52-Q57):

NEW QUESTION # 52

An administrator would like to limit the access in vRealize Log Insight for application developers to a specific group of hosts where their application is running.

What should the administrator to configure satisfy this requirement?

- A. Define a data set with required ESXi hosts and associate it with a role.
- B. Make sure that all ESXi hosts are added to the same vSphere HA/DRS cluster.
- C. Define a data set with required ESXi hosts and associate it with the vSphere content pack.
- D. Create a DRS Host group and assign the users as part of the role assignment in vRealize Log Insight.

Answer: A

Explanation:

To limit access in vRealize Log Insight for application developers to a specific group of hosts, the administrator can define a dataset that includes only the required ESXi hosts where the application is running, and then associate this data set with a specific role. By doing this, the administrator ensures that the developers only have access to the logs from those specific hosts.

This method leverages the role-based access control (RBAC) in vRealize Log Insight, allowing granular control over the logs that users can access based on their assigned role and the data sets to which they are associated.

NEW QUESTION # 53

An administrator has been tasked with deploying vRealize Operations using vRealize Suite Lifecycle Manager (vRSLCM). Which two options are steps in the process? (Choose two.)

- A. Verify that the vRealize Operations product binary is available in vRealize Suite Lifecycle Manager.
- B. Verify that the vRealize Suite or vRealize Operations license is Advanced Edition or Enterprise Edition.
- C. Verify that the destination vSphere Cluster Datastore resides on an all flash vSAN.
- D. Download the PAK file for the vSAN Management Pack.
- E. Verify that you obtained the vRealize Suite or vRealize Operations license with a quantity that fulfills the requirements of this design.

Answer: A,E

Explanation:

Verify that the vRealize Operations product binary is available in vRealize Suite Lifecycle Manager: Before deploying vRealize Operations through vRSLCM, you must ensure that the vRealize Operations binary is available in vRSLCM for deployment.

Verify that you obtained the vRealize Suite or vRealize Operations license with a quantity that fulfills the requirements of this design: It's essential to ensure that the appropriate license for vRealize Operations is available and meets the required capacity for the deployment.

NEW QUESTION # 54

Which option represents a use case of vRealize Log Insight?

- A. Intelligently group log sources standard output to rapidly understand issues.
- B. Evaluate the historical utilization of resources to generate a projection of the future workload.
- C. Auto-scale applications as a response of log pattern identification.
- D. Analyze communications between applications to facilitate micro-segmentation.

Answer: A

Explanation:

vRealize Log Insight is primarily used for log management and analytics, helping administrators efficiently aggregate, search, and analyze log data from various sources. Chosen option describes the core functionality of vRealize Log Insight, where it intelligently groups and aggregates log sources to help users quickly understand issues, identify patterns, and troubleshoot problems effectively.

NEW QUESTION # 55

An administrator has been tasked to quickly recover unused allocated compute from existing development virtual machines (VMs) using vRealize Operations, as the vSphere cluster is now at capacity.

The current state of the environment:

The VMs either have dev or prod in their name.

Production VMs reside on cluster due to historical usage.

The administrator already has permission to modify any development VMs within the cluster.

Which approach below will quickly ensure cluster compute resources are recovered from the correct VMs?

- A. Exclude any Production virtual machines before running the Rightsize action.
- B. Generate an Oversized Virtual Machines Report to identify suitable virtual machines and liaise with the VM owners.
- C. Use the Heavy Hitter VMs Dashboard to identify the VMs which are consistently consuming a large amount of resources and liaise with the VM owners.
- D. Generate an Undersized Virtual Machines Report to identify suitable virtual machines and liaise with the VM owners.

Answer: A

Explanation:

To recover unused allocated compute resources quickly from development VMs in a cluster, the best approach is to use the Rightsize action while ensuring that Production virtual machines are excluded from the process. By excluding production VMs, the administrator can focus on development VMs (those with "dev" in their name) and adjust their resource allocations without affecting critical production systems.

NEW QUESTION # 56

When using vRealize Lifecycle Manager to capture content from a vRealize Operations endpoint, which three statements are correct regarding the content sync? (Choose three.)

- A. The UI retrieves the content from the endpoint when listing the content for the first time.
- B. Select the "Get latest" content option to retrieve the content, before the initial sync.
- C. An auto refresh of content list runs in the background every 15 minutes.
- D. The UI retrieves the content every time from the endpoint when opening the endpoint.
- E. An auto refresh of content list runs in the background every 30 minutes.
- F. Select the "Get latest" content option to retrieve the content in between automatic sync timers.

Answer: A,E,F

Explanation:

An auto refresh of content list runs in the background every 30 minutes: vRealize Lifecycle Manager automatically refreshes the content list from the vRealize Operations endpoint every 30 minutes to ensure the most current content is displayed.

Select the "Get latest" content option to retrieve the content in between automatic sync timers: If the administrator wants to manually sync and get the latest content between the auto-refresh intervals, they can select the "Get latest" option.

The UI retrieves the content from the endpoint when listing the content for the first time: When accessing the content for the first time, the UI will retrieve the content directly from the endpoint to populate the list.

NEW QUESTION # 57

.....

At the same time, our service guidelines have always been customer first. As long as you choose 2V0-32.24 real exam, we will be responsible for you in the end. Every 2V0-32.24 exam practice's staff member is your family they will accompany you to achieve your dream! Our company's service aim is to make every customer satisfied! 2V0-32.24 Training Materials are looking forward to being able to accompany you on such an important journey.
