Amazon AWS Certified SysOps Administrator - Associate Sample Questions (Q766-Q771):

NEW QUESTION # 766

A SysOps Administrator needs to create a replica of a company's existing AWS infrastructure in a new AWS account. Currently, an AWS Service Catalog portfolio is used to create and manage resources.

What is the MOST efficient way to accomplish this?

- A. Run an AWS Lambda function to create a new AWS Service Catalog portfolio based on the output of the DescribePortfolioAPI operation.
- B. Manually create an AWS Service Catalog portfolio in the new AWS account that duplicates the original portfolio.

- C. Share the AWS Service Catalog portfolio with the other AWS accounts and import the portfolio into the other AWS accounts.
- D. Create an AWS CloudFormation template to use the AWS Service Catalog portfolio in the new AWS account.

Answer: D

Explanation/Reference: <https://aws.amazon.com/blogs/mt/automate-account-creation-and-resource-provisioning-using-aws-service-catalog-aws-organizations-and-aws-lambda/>

NEW QUESTION # 767

How can software determine the public and private IP addresses of the Amazon EC2 instance that it is running on?

- A. Query the local instance metadata.
- B. Query the appropriate Amazon CloudWatch metric.
- C. Use ipconfig or ifconfig command.
- D. Query the local instance userdata.

Answer: A

NEW QUESTION # 768

A user has setup a web application on EC2. The user is generating a log of the application performance at every second. There are multiple entries for each second. If the user wants to send that data to CloudWatch every minute, what should he do?

- A. It is not possible to send the custom metric to CloudWatch every minute
- B. The user should send only the data of the 60th second as CloudWatch will map the receive data timezone with the sent data timezone
- C. Give CloudWatch the Min, Max, Sum, and SampleCount of a number of every minute
- D. Calculate the average of one minute and send the data to CloudWatch

Answer: C

Explanation:

Explanation/Reference:

Explanation:

Amazon CloudWatch aggregates statistics according to the period length that the user has specified while getting data from CloudWatch. The user can publish as many data points as he wants with the same or similar time stamps. CloudWatch aggregates them by the period length when the user calls get statistics about those data points. CloudWatch records the average (sum of all items divided by the number of items. of the values received for every 1-minute period, as well as the number of samples, maximum value, and minimum value for the same time period. CloudWatch will aggregate all the data which have time stamps within a one-minute period.

NEW QUESTION # 769

A company's IT Security team is performing an audit of the AWS environment to determine which servers need to be patched and where additional security controls need to be added.

The company is responsible for which of the following? (Choose two.)

- A. Enabling server-side encryption with Amazon S3-Managed Keys (SSE-S3) on S3 objects
- B. Patching PHP in an AWS Elastic Beanstalk managed EC2 application
- C. Patching the database engine on RDS instances
- D. Patching the OS on Amazon RDS instances
- E. Patching the OS on Amazon EC2 instances

Answer: A,E

Explanation:

Amazon RDS manages the work involved in setting up a relational database: from provisioning the infrastructure capacity you request to installing the database software. Once your database is up and running, Amazon RDS automates common administrative

tasks such as performing backups and patching the software that powers your database.

NEW QUESTION # 770

A company has an application that is running on an EC2 instance in one Availability Zone. A SysOps Administrator has been tasked with making the application highly available. The Administrator created a launch configuration from the running EC2 instance. The Administrator also properly configured a load balancer.

What step should the Administrator complete next to make the application highly available?

- A. Create an Auto Scaling group by using the launch configuration across at least 3 Availability Zones with a minimum size of 2, desired capacity of 2, and a maximum of 2.
- B. Create an Auto Scaling group by using the launch configuration across at least 3 regions with a minimum size of 2, desired capacity of 2, and a maximum size of 2.
- C. Create an Auto Scaling group by using the launch configuration across at least 2 regions with a minimum size of 1, desired capacity of 1, and a maximum size of 1.
- **D. Create an Auto Scaling group by using the launch configuration across at least 2 Availability Zones with a minimum size of 1, desired capacity of 1, and a maximum size of 1.**

Answer: D

NEW QUESTION # 771
