

NSK300考試重點 - NSK300 PDF題庫

順便提一下，可以從雲存儲中下載KaoGuTi NSK300考試題庫的完整版：<https://drive.google.com/open?id=1KSLbC2oL5xa5kOHJdJ-DyBgYOzhsWkSX>

我們提供的產品是可以100%把你推上成功，那麼IT行業的巔峰離你又近了一步。如果你還沒有通過考試的信心，在這裏向你推薦一個最優秀的參考資料。在上面你可以免費下載我們提供的關於 Netskope NSK300 題庫的部分考題及答案測驗我們的可靠性。只需要短時間的學習就可以通過考試的最新的 NSK300 考古題出現了。選擇最新的 NSK300 考題會將對你有很大幫助，你需要考前用考試模擬題隨機做練習，重複做上幾次。

Netskope NSK300 考試大綱：

主題	簡介
主題 1	<ul style="list-style-type: none">• Netskope Platform Troubleshooting: This section of the exam measures the skills of Support Engineers and focuses on identifying and resolving common issues within the Netskope platform. It includes troubleshooting client connectivity problems, analyzing steering methods, resolving general connectivity concerns, and addressing SAML integration issues. The section ensures candidates can diagnose and fix issues that impact platform performance and user access.
主題 2	<ul style="list-style-type: none">• Cloud Security Solutions: This section of the exam measures the skills of Cloud Security Analysts and covers the core components and functions of the Netskope Security Cloud Platform. It includes understanding how the platform integrates with enterprise environments, the deployment methods supported by Netskope, and the role of various microservices in delivering cloud-based security. The focus is on ensuring candidates can recognize how Netskope's architecture protects users, applications, and data across cloud services.
主題 3	<ul style="list-style-type: none">• Netskope Platform Monitoring: This section of the exam measures the capabilities of Security Operations Center (SOC) Analysts and focuses on monitoring the platform through reporting and analytics tools. It highlights how Netskope insights support visibility into user activity, cloud app behavior, and policy effectiveness to help organizations maintain a continuous cloud security posture.
主題 4	<ul style="list-style-type: none">• Netskope Platform Management: This section of the exam measures the skills of Security Administrators and covers essential administrative tasks required to manage the Netskope Security Cloud Platform. It includes managing DLP functions, handling identity integrations, and monitoring Netskope components to maintain platform stability. The domain ensures professionals can manage daily operations and maintain strong access, data, and security controls.
主題 5	<ul style="list-style-type: none">• Netskope Platform Implementation: This section of the exam measures the abilities of Cloud Security Engineers and focuses on implementing the Netskope Security Cloud Platform using recommended steering architectures and deployment approaches. It includes key concepts such as API-enabled protection and real-time protection features, ensuring candidates understand how to deploy Netskope to secure cloud usage effectively within enterprise networks.

Netskope NSK300考試重點和KaoGuTi - 資格考試的領導者和NSK300 PDF 題庫

KaoGuTi是一個專門提供IT認證考試資料的網站，它的考試資料通過率達到100%，這也是大多數考生願意相信KaoGuTi網站的原因之一，KaoGuTi網站一直很關注廣大考生的需求，以最大的能力在滿足考生們的需要，KaoGuTi Netskope的NSK300考試培訓資料是一個空前絕後的IT認證培訓資料，有了它，你將來的職業生涯將風雨無阻。

最新的 Netskope NCCSA NSK300 免費考試真題 (Q37-Q42):

問題 #37

You deployed IPsec tunnels to steer on-premises traffic to Netskope. You are now experiencing problems with an application that had previously been working. In an attempt to solve the issue, you create a Steering Exception in the Netskope tenant for that application; however, the problems are still occurring. Which statement is correct in this scenario?

- A. You must create a private application to steer Web application traffic to Netskope over an IPsec tunnel.
- B. You must deploy a PAC file to ensure the traffic is bypassed pre-tunnel
- C. Exceptions only work with IP address destinations
- **D. Steering bypasses for IPsec tunnels must be applied at your edge network device.**

答案： D

解題說明：

In the scenario where you have deployed IPsec tunnels to steer on-premises traffic to Netskope and are experiencing issues with an application, the correct statement is C: Steering bypasses for IPsec tunnels must be applied at your edge network device. This means that to effectively bypass the steering for a specific application, the configuration must be done on the network device that is establishing the IPsec tunnel, such as a firewall or router. This device controls the traffic before it enters the tunnel, so applying the bypass there ensures that the application's traffic does not get directed through the tunnel and can reach its destination directly.

問題 #38

You are implementing Netskope Cloud Exchange in your company to include functionality provided by third-party partners. What would be a reason for using Netskope Cloud Risk Exchange in this scenario?

- A. to ingest events and alerts from a Netskope tenant
- B. to map multiple scores to a normalized range
- **C. to automate service tickets from alerts of interest**
- D. to feed SOC with detection and response services

答案： C

解題說明：

The reason for using Netskope Cloud Risk Exchange in this scenario is to automate service tickets from alerts of interest. Netskope Cloud Risk Exchange (CRE) is designed to ingest user, device, and application risk scores, creating a dashboard view of contributors to your company's overall risk score and trend. One of the key functionalities of CRE is to trigger risk-reducing actions through business rules that are tuned to a weighted score. Automating service tickets from alerts of interest is a part of this functionality, as it allows for the automatic creation of tickets in response to specific alerts, streamlining the process of addressing potential security issues.

The use cases for Netskope Cloud Risk Exchange, including the automation of service tickets, can be found in the official Netskope resources. Further information on how to integrate and utilize Netskope Cloud Risk Exchange for automating service tickets can be found in the Netskope Knowledge Portal.

問題 #39

You are attempting to merge two Advanced Analytics reports with DLP incidents: Report A with 3000 rows and Report B with 6000 rows. Once merged, you notice that the merged report is missing a significant number of rows. What is causing this behavior?

- A. Missing data is due to viewing limits.
- B. Filters are applied differently to dimensions and measures
- C. Visualizations have a system limit of 5000 rows.
- D. Netskope automatically deduplicates data in merged reports.

答案： A

解題說明：

When merging two Advanced Analytics reports in Netskope, if the merged report is missing rows, it is likely due to viewing limits within the system. Netskope's Advanced Analytics platform has limitations on the number of rows that can be viewed at once, which can result in missing data when dealing with large reports.

This viewing limit ensures performance and manageability of the data within the system.

The behavior of data viewing limits in Netskope Advanced Analytics is discussed in the Netskope Knowledge Portal, which provides insights into how data is explored and managed within the platform.

問題 #40

You are using Netskope CSPM for security and compliance audits across your multi-cloud environments. To decrease the load on the security operations team, you are researching how to auto-remediate some of the security violations found in low-risk environments.

Which statement is correct in this scenario?

- A. You can use Netskope API-enabled Protection for auto-remediation of security violation results.
- B. You can use Netskope Cloud Exchange for auto-remediation of security violation results.
- C. Netskope does not support automatic remediation of security violation results due to the high risk associated with it.
- D. You can use Netskope Auto-remediation frameworks from the public Netskope GitHub Open Source repository for auto-remediation of security violation results.

答案： D

解題說明：

Netskope supports automatic remediation of security violations through its Auto-Remediation frameworks, which are available in the public Netskope GitHub Open Source repository. These frameworks allow for the automatic mitigation of risks associated with security misconfigurations in your cloud environment. The Netskope Auto-Remediation framework for AWS, for example, deploys a set of AWS Lambda functions that query the Netskope API at scheduled intervals and automatically mitigates supported violations¹. Similarly, there are frameworks for GCP and other cloud environments that follow the same principle². This capability is particularly useful for low-risk environments where the security operations team's workload can be reduced by automating the remediation process.

問題 #41

You have enabled CASB traffic steering using the Netskope Client, but have not yet enabled a Real-time Protection policy. What is the default behavior of the traffic in this scenario?

- A. Traffic will be allowed and logged.
- B. Traffic will be blocked and logged.
- C. Traffic will be blocked, but not logged.
- D. Traffic will be allowed, but not logged.

答案： A

解題說明：

In the scenario where CASB traffic steering is enabled using the Netskope Client without a Real-time Protection policy being activated, the default behavior of the traffic is to allow and log it (B). This means that the traffic will not be blocked; instead, it will be permitted to pass through and will be recorded for monitoring and analysis purposes. This default setting ensures visibility into the traffic and user activities without immediately enforcing a block, allowing for a period of observation and policy tuning before potentially more restrictive actions are taken¹.

問題 #42
