It is difficult to get the PSPO-I certification for you need have extremely high concentration to have all test sites in mind. Our PSPO-I learning questions can successfully solve this question for the content are exactly close to the changes of the real exam. When you grasp the key points, nothing will be difficult for you anymore. Our professional experts are good at compiling the PSPO-I training guide with the most important information. Believe in us, and your success is 100% guaranteed!

Scrum framework is one of the most popular agile approaches used in software development. It is a flexible and adaptable method that emphasizes team collaboration, adaptive planning, and continuous improvement. One key role in this framework is the Product Owner, who is responsible for defining and prioritizing the product backlog, ensuring the team is working on the right things at the right time. As such, the role of the Product Owner is critical to the success of any Scrum team.

Scrum Professional Scrum Product Owner I PSPO-I Prüfungsfragen mit Lösungen (Q37-Q42):

37. Frage

A Scrum Team has been working on a product for 9 Sprints. A new Product Owner who is new to Scrum joins the team and understands she is accountable for the Product Backlog. However, she is unsure about the purpose of the Product Backlog. She has read that the Product Backlog should be a list of all user features for the product. She goes to the Scrum Master asking where to put the other types of requirements that are going to be taken into account. Are all of the following types of requirements acceptable on a Product Backlog?

- * Stability requirements
- * Performance requirements
- * Product Functionality
- * Documentation
- * Fixes

(choose the best answer)

- **A. Yes, they all belong on the Product Backlog. The Product Backlog is supposed to be the "single source of truth" for all the work for the product.**
- B. No. Product Backlog is a tool for the Product Owner. The Product Owner represents the users and stakeholders. Other types of requirements should be managed

Antwort: A

Begründung:

separately by the Developers. They are not the Product Owner's concern.

Explanation:

The Product Backlog is an ordered list of everything that is known to be needed in the product. It is the single source of truth for the Scrum Team and the stakeholders. It contains all the requirements, features, functions, enhancements, fixes, and anything else that can deliver value to the customers and users of the product.

All types of requirements are acceptable on a Product Backlog, as long as they are aligned with the product vision and goals, and they are transparent, clear, and valuable. The Product Backlog can include stability requirements, performance requirements, product functionality, documentation, fixes, or any other aspects that contribute to the quality and usability of the product.

The Product Owner is accountable for maximizing the value of the product resulting from the work of the Scrum Team. The Product

Owner is responsible for managing and refining the Product Backlog, collaborating with the stakeholders and the Developers, and ordering the items in a way that best achieves goals and missions. The Product Owner represents the interests of everyone with a stake in the product and ensures that the Scrum Team works on the right things at the right time.

The Developers are accountable for creating a "Done" Increment that meets the Definition of Done each Sprint. The Developers are responsible for planning and executing the Sprint Backlog, designing and building the product functionality, testing and improving the product quality, and delivering a potentially releasable Increment. The Developers work closely with the Product Owner to understand and clarify the Product Backlog items, provide feedback and estimates, and suggest improvements and innovations.

38. Frage

Which of the following are criteria to order Product Backlog items?

(choose all that apply)

- A. Value of Product Backlog items.
- B. All of the above.
- C. Dependencies between Product Backlog items.
- D. Dependencies to other products.
- E. The availability of the Scrum Master.

Antwort: A,C,D

Begründung:

Explanation

The Product Owner orders the Product Backlog items according to various criteria, such as:

- * The value of Product Backlog items. The Product Owner aims to maximize the value of the product and the work of the Scrum Team. Therefore, they prioritize the items that deliver the most value to the stakeholders and the users, considering factors such as customer satisfaction, market share, revenue, social impact, etc.
- * The dependencies between Product Backlog items. The Product Owner tries to minimize the dependencies between items, as they may create complexity, uncertainty, and risk. Therefore, they order the items in a way that reduces or eliminates the dependencies, or resolves them as early as possible.
- * The dependencies to other products. The Product Owner also considers the dependencies that the product has to other products, such as platforms, frameworks, libraries, services, etc. Therefore, they order the items in a way that aligns with the availability and compatibility of those products.

References:

- * Scrum Guide 2020, page 11: "The Product Owner is accountable for effective Product Backlog management, which includes ... ordering Product Backlog items; and, ensuring that the Product Backlog is transparent, visible and understood."
- * Scrum Guide 2020, page 11: "The ordering of the items in the Product Backlog is the sole responsibility of the Product Owner. They order Product Backlog items to best achieve goals and missions."
- * Scrum Guide 2020, page 11: "Higher ordered Product Backlog items are clearer and more refined than lower ordered ones."

39. Frage

Which two things are appropriate for a Scrum Master to do, if the Scrum Team does not have the tools and environment to completely finish each selected Product Backlog item?

(choose the best two answers)

- A. Coach the Scrum Team to improve its skills, tools and environment over time and adjust the Definition of Done accordingly.
- B. Declare the Scrum Team not ready for Scrum.
- C. Encourage the Product Owner to accept partially done Increments until the situation improves.
- D. Refocus the current Sprint on establishing the Scrum Team's environment instead of delivering an Increment.
- E. Have the Scrum Team establish a Definition of Done that is actually possible to achieve given current circumstances.

Antwort: A,E

Begründung:

Explanation

Scrum Explore

The correct answers are A and D.

A: Coach the Scrum Team to improve its skills, tools and environment over time and adjust the Definition of Done accordingly. This is an appropriate action for a Scrum Master, as it helps the Scrum Team to overcome the impediments that prevent them from delivering a potentially releasable Increment. The Definition of Done should reflect the current reality of the Scrum Team, but also be a source of continuous improvement¹².

D: Have the Scrum Team establish a Definition of Done that is actually possible to achieve given current circumstances. This is also an appropriate action for a Scrum Master, as it ensures that the Scrum Team has a clear and shared understanding of what it means to complete a Product Backlog item. The Definition of Done should be realistic and achievable, but also challenging and ambitious¹².

B: Refocus the current Sprint on establishing the Scrum Team's environment instead of delivering an Increment. This is not an appropriate action for a Scrum Master, as it violates the purpose of the Sprint, which is to deliver a valuable product Increment that meets the Sprint Goal. The Scrum Team should not change the Sprint Goal or scope during the Sprint, unless the Product Owner decides to cancel the Sprint³.

C: Encourage the Product Owner to accept partially done Increments until the situation improves. This is not an appropriate action for a Scrum Master, as it compromises the quality and value of the product. The Product Owner should only accept Increments that meet the Definition of Done and the acceptance criteria. Partially done Increments increase technical debt and risk, and reduce transparency and feedback¹².

E: Declare the Scrum Team not ready for Scrum. This is not an appropriate action for a Scrum Master, as it undermines the Scrum values and principles. The Scrum Master should support the Scrum Team in adopting and applying Scrum, regardless of the challenges and constraints they face. The Scrum Master should foster a culture of empiricism, self-organization, collaboration, and continuous improvement.

40. Frage

Which approach is best for Scrum Teams in order to produce valuable Increments?

(choose the best answer)

- A. Each Developer works on the component where they feel that they can contribute.
- **B. Each Scrum Team is accountable for developing functionality from beginning to end.**
- C. Each Scrum Team works on an independent set of components.
- D. Each Scrum Member works only as an independent layer of the system.

Antwort: B

Begründung:

The best approach for Scrum Teams to produce valuable Increments is to be accountable for developing functionality from beginning to end, as this enables them to deliver potentially releasable products that meet the definition of "Done". The Scrum Guide states that "The Developers are the people in the Scrum Team that are committed to creating any aspect of a usable Increment each Sprint."¹ This means that the Developers are not limited by the boundaries of components, layers, or technologies, but rather they collaborate and coordinate to deliver a complete and integrated product that satisfies the Sprint Goal and the Product Owner's expectations.

41. Frage

All Scrum artifacts must be transparent to ensure sufficient accuracy of inspection. Which two measures ensure that the Product Backlog is transparent?

(choose the best two answers)

- A. The Product Backlog is managed using a web-based tool.
- B. The Product Backlog only has work for the next 2 Sprints.
- C. The Product Backlog is ordered.
- D. Each Product Backlog item has a MoSCoW priority.
- E. The Product Backlog is available to all stakeholders.

Antwort: C,E

Begründung:

Transparency is one of the three pillars of Scrum, along with inspection and adaptation. Transparency means that all aspects of the Scrum process and the product are visible and understandable to everyone who needs to work on or with them. Transparency enables effective inspection and adaptation, which are essential for delivering valuable products and improving the Scrum Team's performance.

All Scrum artifacts must be transparent to ensure sufficient accuracy of inspection. Scrum artifacts include the Product Backlog, the Sprint Backlog, and the Increment. The Product Backlog is an ordered list of everything that is known to be needed in the product. It is the single source of truth for the Scrum Team and the stakeholders. It contains all the requirements, features, functions, enhancements, fixes, and anything else that can deliver value to the customers and users of the product.

Two measures that ensure that the Product Backlog is transparent are:

The Product Backlog is ordered: The Product Owner orders the items in the Product Backlog based on factors such as value, risk, priority, dependency, feedback, or market conditions. The order of the Product Backlog items provides a clear and consistent indication of what is most important and urgent for the product. The order of the Product Backlog items also helps the Scrum Team and the stakeholders to plan and forecast effectively.

The Product Backlog is available to all stakeholders: The Product Owner makes the Product Backlog visible and accessible to everyone who has a stake in the product, such as customers, users, sponsors, managers, or other teams. The availability of the Product Backlog enables transparency, collaboration, feedback, and alignment among all parties involved in the product development.

The other options are not valid or relevant measures to ensure that the Product Backlog is transparent. They are either too restrictive, arbitrary, or unrelated to the Product Backlog's transparency. They are:

Each Product Backlog item has a MoSCoW priority: MoSCoW is a technique for prioritizing requirements based on their importance: Must have, Should have, Could have, or Won't have. While this technique can be useful for some products or contexts, it is not a mandatory or universal way to order the Product Backlog items. The Product Owner may use other factors or methods to order the Product Backlog items based on their value and relevance for the product.

The Product Backlog only has work for the next 2 Sprints: This is a too limiting and unrealistic measure for the Product Backlog. The Product Backlog should contain all the work that is known to be needed in the product, not just for the next 2 Sprints. The Product Backlog is a living artifact that evolves as the product and the market change. The Product Owner should continuously refine and update the Product Backlog to reflect the current and future needs and expectations of the customers and users.

The Product Backlog is managed using a web-based tool: This is an irrelevant measure for the Product Backlog's transparency. The Product Owner can use any tool or format to manage the Product Backlog, as long as it is clear, concise, and valuable. The tool or format does not affect the transparency of the Product Backlog itself. What matters more is how the Product Owner communicates and collaborates with the Scrum Team and the stakeholders using the Product Backlog.
