問題 #39

When designing a projection system for an auditorium, what are the PRIMARY design considerations?

- A. presenter position, viewing area, aspect ratio
- B. inverse square law, screen gain, reverberation
- C. viewing cone, viewing distance, viewing angle
- D. HVAC layout, rear projection, text height

答案：C

解題說明：

The primary design considerations for a projection system in an auditorium include the viewing cone, viewing distance, and viewing angle. These factors determine the optimal placement and size of the projection screen to ensure that all audience members have a clear and comfortable view. The viewing cone defines the area in which the screen can be clearly seen, the viewing distance impacts the size of the text and images, and the viewing angle ensures the image is visible without distortion from various seating positions.

問題 #40

Which addressing scheme is used to define a fixed, routable IPv4 address that is locally assigned?

- A. static
- B. DHCP
- C. link-local
- D. DHCP reservation

答案：A

解題說明：

A static IP address is a fixed IP address that is manually assigned and does not change. This scheme is suitable for devices that require a constant address, allowing them to be easily located and accessed within a network. Static IP addresses are commonly used for routers, servers, and other essential devices in AV networks.

CTS Technology Specialist ReferenceThe CTS curriculum covers IP addressing schemes, noting that static IP addresses provide reliability and are preferred for AV equipment requiring stable and consistent network access.

問題 #41

A client has ordered a large project from a company. This project has several critical components and a fixed schedule. Which of the following will be VITAL for ensuring that the company meets the deadlines?

- A. confirming lead times
- B. proper job costing
- C. qualifying the customer
- D. confirming price changes

答案： A

解題說明：

For a project with several critical components and a fixed schedule, confirming lead times is vital. Lead times refer to the amount of time it takes for components to be delivered from the supplier to the project site. By confirming and managing lead times, the company can ensure that all necessary components arrive on time, preventing delays and enabling the project to proceed according to the planned schedule. This is essential for meeting deadlines and ensuring project success.

問題 #42

Assuming that the speakers in the picture on the LEFT are 8Ω drivers, what is the impedance of the speaker system on the left?

- A. 4Ω
- B. 2Ω
- C. 16Ω
- D. 8Ω

答案： B

解題說明：

Assuming the speakers on the left are 8Ω drivers and they are connected in parallel, the total impedance Z_t can be calculated using the formula for parallel resistance:

$\frac{1}{Z_t} = \frac{1}{Z_1} + \frac{1}{Z_2}$ For two 8Ω speakers in parallel: $\frac{1}{Z_t} = \frac{1}{8} + \frac{1}{8} = \frac{2}{8} = \frac{1}{4}$

Therefore, $Z_t = 4Ω$. If the wiring in the diagram shows two pairs of 8Ω speakers connected in parallel, the total impedance is 4Ω for each pair, and if these pairs are then connected in parallel again, the final impedance is:

$\frac{1}{Z_t} = \frac{1}{4} + \frac{1}{4} = \frac{2}{4} = \frac{1}{2}$ Thus, the total impedance is 2Ω.

問題 #43

According to AVIXA's AV Performance Verification standard, at what point should the loudspeaker transformer tap setting be verified?

- A. Closeout
- B. Post-integration
- C. Systems integration
- D. Pre-integration

答案： C

解題說明：

The systems integration phase is when devices are installed and configured together. Verifying loudspeaker transformer taps during this phase ensures that each speaker receives the correct power level, which is critical for achieving uniform audio coverage and system performance.

"Loudspeaker transformer taps should be verified during the systems integration phase to ensure proper audio balance and coverage before final verification."
