

# AZ-800 Exam VCE: Administering Windows Server Hybrid Core Infrastructure - AZ-800 Pass Guide & AZ-800 Study Guide

BONUS!!! Download part of Prep4King AZ-800 dumps for free: <https://drive.google.com/open?id=1utVchEwilTnqcpFneYMQUWiz8W0hSMS>

Career grooming with AZ-800 exams are your right. Rather, it has become necessary in the most challenging scenario of enterprises. Like most of the professionals, you might find it tough and beyond your limits. Here comes the role of Prep4King AZ-800 Dumps to encourage you and make it possible for you to step ahead with confidence. The growing network of our clientele proves that our dumps work wonders and help you gain a definite success in your AZ-800 certification exams.

The Microsoft AZ-800 exam measures the candidate's ability to manage various services, such as Azure Active Directory, Azure Site Recovery, Azure Backup, and Azure File Sync. AZ-800 exam also tests the candidate's ability to manage and monitor Windows Server workloads, including virtualization, storage, and networking. Candidates who pass AZ-800 exam can demonstrate their skills in managing and administering hybrid infrastructure solutions, which are becoming increasingly important in today's business world. The Microsoft AZ-800 Certification Exam is an ideal certification for IT professionals who want to advance their careers in the field of hybrid cloud infrastructure management.

## Pass Guaranteed Quiz Microsoft - AZ-800 - Efficient Administering Windows Server Hybrid Core Infrastructure Reliable Test Topics

All knowledge contained in our AZ-800 Practice Engine is correct. Our workers have checked for many times. Also, we will accept annual inspection of our AZ-800 exam simulation from authority. The results show that our AZ-800 study materials completely have no problem. Our company is rated as outstanding enterprise. And at the same time, our website have become a famous brand in the market. We also find that a lot of the fake websites are imitating our website, so you have to be careful.

Microsoft AZ-800 certification exam is designed for IT professionals who are responsible for managing and implementing hybrid IT solutions that incorporate both on-premises and cloud resources. AZ-800 exam is part of the Microsoft Certified: Azure Stack HCI Administrator Associate certification, which validates the skills and knowledge required to manage and maintain hybrid infrastructure using Windows Server 2019 and Azure services.

Microsoft AZ-800 Exam is a certification exam for individuals who want to become certified in administering Windows Server Hybrid Core Infrastructure. AZ-800 exam is designed to test the candidate's knowledge of administering Windows Server core infrastructure in a hybrid environment. Passing AZ-800 exam will validate the candidate's skills in managing and maintaining core infrastructure components, including compute, storage, and networking.

## Microsoft Administering Windows Server Hybrid Core Infrastructure Sample Questions (Q151-Q156):

### NEW QUESTION # 151

Your network contains an Active Directory Domain Services (AD DS) forest named contoso.com. The root domain contains the domain controllers shown in the following table.

Name	FSMO role
DC1	Domain naming master
DC2	RID master
DC3	PDC emulator
DC4	Schema master
DC5	Infrastructure master

A failure of which domain controller will prevent you from creating application partitions?

- A. DC1
- B. DC5
- C. DC4
- D. DC3
- E. DC2

**Answer: A**

Explanation:

#### NEW QUESTION # 152

You have a server named Server1.

You plan to use Storage Spaces to expand the storage available to Server1. You attach eight physical disks to Server1. Four disks are HDDs and four are SSDs.

You need to create a volume on Server1 that will use the storage on all the new disks. The solution must provide the fastest read performance for frequently used files.

Which three actions should you perform in sequence? To answer, move the appropriate actions from the list of actions to the answer area and arrange them in the correct order.

**Actions**

Create a virtual disk.

Convert each new disk into a dynamic disk.

Create a storage pool.

Create a spanned volume.

Convert each new disk into a GPT disk.

Create a simple volume

**Answer Area**

**NEW QUESTION # 153**

You have an Azure subscription that contains a virtual network named VNet1. Vnet1 contains three subnets named Subnet1, Subnet2, and Subnet3. You deploy a virtual machine that has the following settings:

- \* Name: VM1
- \* Subnet: Subnet2
- \* Network interface name: NIC1
- \* Operating system: Windows Server 2022

You need to ensure that VM1 can route traffic between Subnet1 and Subnet3. The solution must minimize administrative effort. What should you do? To answer, select the appropriate options in the answer area.

NOTE: Each correct selection is worth one point.

**Answer Area**

From the Azure portal:

- Associate a routing table with Subnet2.
- Associate a routing table with Subnet2.
- Attach two additional interfaces to VM1.
- Enable IP forwarding for NIC1.

On VM1:

- Install and configure a network controller.
- Install and configure a network controller.
- Install and configure Routing and Remote Access.
- Run the route add command.

**Answer:**

Explanation:

**Answer Area**

From the Azure portal:

- Associate a routing table with Subnet2.
- Associate a routing table with Subnet2.
- Attach two additional interfaces to VM1.
- Enable IP forwarding for NIC1.

On VM1:

- Install and configure a network controller.
- Install and configure a network controller.
- Install and configure Routing and Remote Access.
- Run the route add command.

**NEW QUESTION # 154**

You have a server named Server1 that runs Windows Server. Server1 has the storage pools shown in the following table.

Name	Number of 7,200-RPM HDDs	Number of 10,000-RPM HDDs	Number of SSDs
Pool1	4	4	None
Pool2	None	2	2
Pool3	3	None	4

You plan to create a virtual disk named VDisk1 that will use storage tiers. Which pools can you use to create VDisk1?

- A. Pool2 and Pool3 only

- B. Pool3 only
- C. Pool1 and Pool3 only
- D. Pool, Pool2, and Pool3
- E. Pool only
- F. Pool 2only
- G. Pool1 and Pool2 only

**Answer: A**

Explanation:

Storage tiering requires both standard HDDs and SSDs. We cannot use Pool1 because it does not have any SSDs.

### NEW QUESTION # 155

You need to ensure that Automanage meets the technical requirements.

On which Azure virtual machines should you enable Automanage?

- A. Server1 and Server4 only
- B. Server2 only
- C. Server1 only
- **D. Server1 and Server2 only**
- E. Server2 and Server3 only

**Answer: D**

Explanation:

Comprehensive and Detailed Explanation with all Administering Windows Server Hybrid Core Infrastructure documents: = In the Administering Windows Server Hybrid Core Infrastructure study materials, Automanage for Azure VMs is described as a service that "onboards supported Azure virtual machines into a curated set of best- practice services automatically." The guide notes that Automanage supports Azure IaaS VMs running Windows Server (2012 R2 and later) and common Linux distributions (for example Ubuntu/RHEL), while unsupported operating systems such as Windows client SKUs or older Windows Server releases are excluded.

The same content emphasizes that Automanage targets "only supported Azure VMs" and does not extend to machines that don't meet OS prerequisites.

Given the scenario, Server1 (supported Linux server) and Server2 (supported Windows Server) meet Automanage prerequisites, whereas the remaining Azure VMs are not in the supported matrix (client OS or an older/unsupported server release). Therefore, enabling Automanage on Server1 and Server2 only satisfies the technical requirement to "use Azure Automanage on all supported Azure virtual machines."
