To prepare for the ADX-211 exam, candidates need to have a strong understanding of Salesforce fundamentals, including data model, security model, and user interface. They should also have experience in configuring and customizing Salesforce, designing and implementing automation workflows, and managing data quality. Candidates can prepare for the exam by taking online courses, attending training sessions, and practicing with sample questions and mock exams.

One of the best ways to prepare for the Salesforce ADX-211 exam is to take a training course. Salesforce offers a range of training courses that cover all the topics that are included in the exam. These courses are taught by experienced Salesforce professionals who have a deep understanding of the platform and its features.

Salesforce ADX-211 Exam is a comprehensive certification that is designed to test an individual's knowledge and expertise in administering, extending, and automating Salesforce. ADX-211 exam is intended for individuals who have already completed the Salesforce Administrator certification and are looking to further enhance their skills in managing Salesforce. The ADX-211 exam covers a wide range of topics, including data modeling, security, automation, and integration, among others.

Simulated ADX-211 Test - ADX-211 Exam Tests

Our Administer, Extend, and Automate Salesforce practice test NewPassLeader features various question styles and levels, so you can customize your Salesforce ADX-211 Exam Questions preparation to meet your needs.

Salesforce Administer, Extend, and Automate Salesforce Sample Questions (Q49-Q54):

NEW QUESTION # 49
The administrator at Cloud Kicks created a flow in a sandbox that walks service agents through the Return Merchandise Authorization creation process. The administrator deployed the flow to production with a Change Set. Users are unable to use the flow in production.
Which step should the administrator take?
Activate the flow administrator take?

- A. Ensure there is an active flow version in the sandbox.
- B. Activate the flow manually after deployment.
- C. Include the active and prior inactive flow version in the Change Set.
- D. Deployment the flow, with the Metadata API instead of Change Sets

Answer: B

Explanation:
A flow is an automation tool that allows you to create processes that perform actions based on user input or record changes. A flow can be triggered by a user who launches it from a button, link, or Lightning page, or by the system when a record is created or updated. A flow has different versions that can be active or inactive. An active version is the one that runs when the flow is triggered, while an inactive version is the one that is saved but not running. When you deploy a flow to production with a change set, the flow version is deployed as inactive by default. This means that you need to activate the flow manually after deployment if you want it to run in production. Reference: https://help.salesforce.com/s/articleView?id=sf.flow_overview.htm&type=5

NEW QUESTION # 50
Universal Containers has a process to allow an employee to submit a vacation request and route it to the employee's manager for approval. An employee attempted to submit a request but it could not be submitted. How could the administrator troubleshoot this?

- A. Ensure the user record has an assigned active manager.
- B. Ensure the approval step has an associated action
- C. Review the system log to determine the root cause.
- D. Use workflow to email the administrator if the process fails.

Answer: A

NEW QUESTION # 51
Support staff at Cloud Kicks work on multiple accounts and opportunities at the same time, Currently, they are switching between browser tabs, which is tedious and confusing. Support managers put in a request for a better agent experience.
What should an administrator recommend?

- A. Implement Service Console.
- B. Create a screen flow to pull all related opportunities onto one page.
- C. Configure Split Lit Views.
- D. Enable Subtab Record Browsing in the Setup menu.

Answer: A

Explanation:

Implement Service Console is what the administrator should recommend to support staff at Cloud Kicks for a better agent experience. Service Console is a Salesforce app that provides a unified interface for agents to manage multiple customer interactions and records at once. Service Console can help agents work more efficiently and productively by providing features such as tabs, subtabs, list views, related lists, highlights panel, interaction log, macros, keyboard shortcuts, and more

NEW QUESTION # 52
The sale VP notices several sales reps generating a contract too early in the sales stage. The help correct this Behavior, the has requested the Create Contract button only be available when the opportunity reach... negotiation stage.
How should the administrator meet this requirement?

- A. Create a validation rule.
- B. Modify page layout.
- C. Configure dynamic action.
- D. Create a custom permission.

Answer: C

Explanation:

Dynamic actions are a way to conditionally display actions on a record page based on criteria such as field values, user profile, device type, or record type. Dynamic actions can help streamline the user interface and guide users to take the right actions at the right time. Dynamic actions can be used to show or hide the Create Contract button based on the opportunity stage value

NEW QUESTION # 53
Users at AW Computing are receiving a duplicate message when they enter contacts with common first and last names. Management wants to improve the user experience but also keep the data Integrity of contacts.
What should an administrator implement for this issue?

- A. Change the duplicate rule to report Instead of alert so the message is avoided.
- B. Update the matching method on the rule from fuzzy to exact for First Name and Last Name.
- C. Add a secondary matching rule to the duplicate rule to match on the associated customer.
- D. Include the Email field to the existing matching rule for a more exact match.

Answer: D

Explanation:

A matching rule is a rule that defines how records are compared for duplication based on certain fields or fuzzy logic. By including more fields or changing the matching method, you can make the matching rule more or less strict and reduce false positives or negatives. In this case, including the email field to the existing matching rule for contacts can help avoid duplicate messages for common names by checking if the email addresses are also identical. Reference: https://help.salesforce.com/s/articleView?id=sf.matching_rules_create.htm&type=5 https://help.salesforce.com/s/articleView?id=sf.matching_rules_considerations.htm&type=5
