They must also be able to configure and troubleshoot the appliance, as well as integrate it with other security solutions and third-party applications.

Cisco Securing Email with Cisco Email Security Appliance Sample Questions (Q68-Q73):

NEW QUESTION # 68

What is the default behavior of any listener for TLS communication?

- A. preferred
- B. preferred-verify
- C. off
- D. required

Answer: C

Explanation:

The default behavior of any listener for TLS communication is B. off. This means that TLS is not allowed for incoming connections to the listener and connections to the listener do not require encrypted Simple Mail Transfer Protocol (SMTP) conversations. This is stated in the web search result 1. To enable TLS for a listener, you need to configure the Use TLS option in the mail flow policy settings for the listener on the Mail Policies > HAT Overview page1. You can choose from three different settings for TLS: No, Preferred, or Required1.

NEW QUESTION # 69

The CEO added a sender to a safelist but does not receive an important message expected from the trusted sender. An engineer evaluates message tracking on the Cisco Secure Email Gateway appliance and determines that the message was dropped by the antivirus engine. What is the reason for this behavior?

- A. End-user safelists apply to antispam engines only.
- B. Administrative access is required to create a safelist.
- C. The sender didn't mark the message as urgent
- D. The sender is included in an ISP blocklist

Answer: A

Explanation:

The reason why the CEO did not receive an important message expected from a trusted sender after adding them to a safelist is because end-user safelists apply to antispam engines only. End-user safelists are lists of sender addresses or domains that end users can create and manage through their quarantine accounts or email clients. End-user safelists allow end users to accept or exempt messages from certain senders or domains from being identified as spam by the antispam engines. However, end-user safelists do not affect other filtering engines such as antivirus, outbreak filters, or content filters. NEW QUESTION # 70

What is the default behavior of any listener for TLS communication?

- A. preferred
- B. preferred-verify
- C. off
- D. required

Answer: C

Explanation:

The default behavior of any listener for TLS communication is B. off. This means that TLS is not allowed for incoming connections to the listener and connections to the listener do not require encrypted Simple Mail Transfer Protocol (SMTP) conversations. This is stated in the web search result 1. To enable TLS for a listener, you need to configure the Use TLS option in the mail flow policy settings for the listener on the Mail Policies > HAT Overview page 1. You can choose from three different settings for TLS: No, Preferred, or Required 1.

NEW QUESTION # 71

A network engineer must tighten up the SPAM control policy of an organization due to a recent SPAM attack. In which scenario

does enabling regional scanning improve security for this organization?

- A. when most of the received email originates outside of the U.S.
- **B. when most of the received email originates from a specific region**
- C. when most of the received spam comes from a specific country
- D. when most of the received spam originates outside of the U.S.

Answer: B

Explanation:

Enabling regional scanning improves security for this organization when most of the received email originates from a specific region. Regional scanning is a feature that allows Cisco ESA to apply different spam thresholds and actions based on the geographic region of the sender's IP address, using a database of IP addresses and regions.

To enable regional scanning on Cisco ESA, the administrator can follow these steps:

Select Security Services > IronPort Anti-Spam and click Edit Settings.

Under Regional Scanning, select Enable Regional Scanning.

Click Submit.

Select Security Services > IronPort Anti-Spam > Regional Settings and click Add Region.

Choose a region from the drop-down menu, such as Asia Pacific.

Enter a spam threshold and an action for that region, such as 80 and Drop.

Click Submit.

NEW QUESTION # 72

Which benefit does enabling external spam quarantine on Cisco SMA provide?

- A. access to the spam quarantine interface on which a user can release, duplicate, or delete
- B. ability to scan messages by using two engines to increase a catch rate
- C. ability to back up spam quarantine from multiple Cisco ESAs to one central console
- **D. ability to consolidate spam quarantine data from multiple Cisco ESA to one central console**

Answer: D

Explanation:

External spam quarantine is a feature that allows Cisco SMA to store and manage spam messages quarantined by multiple Cisco ESAs in one central location, providing a unified view and administration of the spam quarantine data.
