C_CPI_2506 Guide Braindumps Is Typically Beneficial for C_CPI_2506 Exam - Prep4sureExam

You will need to pass the SAP Certified Associate - Integration Developer (C_CPI_2506) exam to achieve the SAP C_CPI_2506 certification. Due to extremely high competition, passing the SAP C_CPI_2506 exam is not easy; however, possible. You can use Prep4sureExam products to pass the C_CPI_2506 Exam on the first attempt. The SAP practice exam gives you confidence and helps you understand the criteria of the testing authority and pass the SAP Certified Associate - Integration Developer (C_CPI_2506) exam on the first attempt.

SAP C_CPI_2506 Exam Syllabus Topics:

Topic	Details
Topic 1	<ul style="list-style-type: none">• Implementing Cloud Integration: This section of the exam measures the skills of Integration Consultants and examines how cloud integration flows are designed and deployed. It emphasizes creating integration scenarios, handling connectivity, and applying best practices to build efficient, secure, and reliable integration processes in SAP's cloud environment.
Topic 2	<ul style="list-style-type: none">• SAP Integration Suite Overview: This section of the exam measures the skills of Integration Consultants and covers the foundational concepts of the SAP Integration Suite. It provides an understanding of the suite's capabilities, its role in connecting applications, and its relevance in modern cloud-based integration scenarios.
Topic 3	<ul style="list-style-type: none">• SAP Event Mesh: This section of the exam measures the skills of Solution Architects and centers on using SAP Event Mesh to support event-driven integration. It highlights the importance of asynchronous communication, event publishing, and subscription models, allowing organizations to build scalable and decoupled systems.
Topic 4	<ul style="list-style-type: none">• Managing APIs: This section of the exam measures the skills of Solution Architects and focuses on managing APIs within the SAP ecosystem. It covers topics such as API provisioning, lifecycle management, security policies, and monitoring, ensuring candidates can handle APIs effectively for enterprise integration needs.

SAP Certified Associate - Integration Developer Sample Questions (Q35-Q40):

NEW QUESTION # 35

Which SAP offering manages integrations across hybrid and multcloud environments?

- A. SAP process Orchestration manages integrations across hybrid and multcloud environments.
- B. SAP Business Technology Platform manages integrations across hybrid and multcloud environments.
- C. SAP Cloud Platform Integration manages integrations across hybrid and multcloud environments.
- **D. SAP Integration Suite manages integrations across hybrid and multcloud environments.**

Answer: D

Explanation:

SAP Integration Suite is the strategic integration platform-as-a-service (iPaaS) from SAP. It provides a comprehensive set of integration capabilities for hybrid and multcloud landscapes.

It connects on-premise SAP systems, cloud SAP solutions (e.g., S/4HANA Cloud, SuccessFactors, Ariba), and third-party applications.

It offers capabilities like Cloud Integration, API Management, Event Mesh, Open Connectors, and Integration Advisor to support various integration patterns.

SAP explicitly positions Integration Suite as the solution to manage end-to-end integrations across heterogeneous and distributed IT landscapes.

Other options:

SAP Cloud Platform Integration was the older name of Cloud Integration (now part of Integration Suite).

SAP Process Orchestration is the legacy on-premise middleware and not designed for multcloud/hybrid environments.

SAP BTP is the overall platform; integration is only one capability within it.

NEW QUESTION # 36

Which SAP Cloud Integration process event allows you to run integration flows directly after deployment?

- A. Router
- **B. Timer**
- C. Content Modifier
- D. Message Digest

Answer: B

Explanation:

A Timer event allows you to run integration flows directly after deployment. A Timer event is triggered by a predefined schedule or interval, such as every hour, every day, or every month. You can use a Timer event to initiate an integration process based on a time-based condition. Reference: Modernize Integration with SAP Integration Suite | openSAP

NEW QUESTION # 37

How do you configure a SOAP adapter for asynchronous processing?

- A. Message Exchange Pattern: One-Way Process Settings: Robust
- B. Message Exchange Pattern: Request-Reply Process Settings WS Standard
- C. Message Exchange Pattern: Request-Reply Process Settings Robust
- **D. Message Exchange Pattern: One-Way Process Settings: WS Standard**

Answer: D

Explanation:

To configure a SOAP adapter for asynchronous processing, you must set the message exchange pattern to one-way and the process settings to WS standard. The message exchange pattern defines how the sender and receiver communicate with each other using SOAP messages. The one-way pattern means that the sender sends a message to the receiver without expecting a response. The process settings define how the SOAP adapter handles errors and acknowledgements during message processing. The WS standard setting means that the SOAP adapter uses WS-ReliableMessaging protocol to ensure reliable delivery of messages and WS-Addressing protocol to identify the endpoints and actions of messages. Reference: Configure the SOAP (SOAP 1.x) Sender Adapter | SAP Help Portal, Configure the SOAP (SOAP 1.x) Receiver Adapter | SAP Help Portal

NEW QUESTION # 38

You want to split a message that contains recurring child nodes. Which of the following splitter types can you use? Note: There are 2 correct answers to this questions.

- A. EDI Splitter
- B. PKCS#7/CMS Splitter
- **C. General Splitter**
- **D. Iterating Splitter**

Answer: C,D

Explanation:

To split a message that contains recurring child nodes, you can use a General Splitter or an Iterating Splitter. A General Splitter allows you to split a message based on an XPath expression that defines the splitting criteria. An Iterating Splitter allows you to split a message based on an XPath expression that defines the repeating element. Reference: Modernize Integration with SAP Integration Suite | openSAP

NEW QUESTION # 39

What do you use in an integration flow to handle unexpected errors?

- A. Exception-handling subprocesses
- B. Try-catch subprocesses
- C. Exception handler integration flow elements
- D. Status code checks

Answer: A

Explanation:

In SAP Cloud Integration (part of Integration Suite), error handling within integration flows is implemented using: Exception Subprocesses # Dedicated subprocesses triggered by an Error Start Event to handle unexpected runtime exceptions. These allow logging, error notifications, or compensating logic.

Other options:

Try-Catch subprocesses # Not a modeling construct in SAP CPI.

Exception handler integration flow elements # Not a standard artifact; error handling is done with exception subprocesses.

Status code checks # Useful for response validation but not full error handling.

Thus, the correct answer is Exception-handling subprocesses.

NEW QUESTION # 40

.....

Once you ensure your grasp on the C_CPI_2506 Questions and answers, evaluate your learning solving the C_CPI_2506 practice tests provided by our testing engine. This innovative facility provides you a number of practice questions and answers and highlights the weak points in your learning. You can improve the weak areas before taking the actual test and thus brighten your chances of passing the exam with an excellent score. Moreover, doing these practice tests will impart you knowledge of the actual exam format and develop your command over it.
