Exam AP-202 Score & Pass4sure AP-202 Pass Guide

Our AP-202 free dumps demo will provide you some basic information for the accuracy of our exam materials. All questions and answers in our AP-202 real dumps are tested by our certified trainers with rich experience and one or two days is enough for you practicing Valid AP-202 Exam Pdf. Our AP-202 dumps torrent contains everything you want to solve the challenge of real exam.

Salesforce B2B Commerce for Developers Accredited Professional Sample Questions (Q198-Q203):

NEW QUESTION # 198

Which out of the box Salesforce B2B Commerce page can give instructions to web crawlers from accessing specific Salesforce B2B Commerce pages?

- A. [cc_RobotsTxt](#)
- B. [CCSiteIndex](#)
- C. [CCPage](#)
- D. [CCCat?SiteMap](#)

Answer: A

Explanation:

The out of the box Salesforce B2B Commerce page that can give instructions to web crawlers from accessing specific Salesforce B2B Commerce pages is cc_RobotsTxt. This is a Visualforce page that generates a robots.txt file, which is a text file that tells web crawlers which pages or files they can or can't request from a site. The page uses the configuration settings CO.RobotsTxtAllow and CO.RobotsTxtDisallow to specify which paths are allowed or disallowed for web crawlers. For example, User-agent: * Disallow: /CCCart will instruct web crawlers to not access the CCCart page. Salesforce B2B Commerce and D2C Commerce Developer Guide, Robots.txt File

NEW QUESTION # 199

A developer is creating a component to implement a custom Terms and Conditions checkbox at checkout in the Aura Commerce template.

Which method should the developer implement on the Lightning web component to ensure the user accepts the terms and conditions?

- A. ComponentValidity
- B. SaveCheckout
- **C. Validate**
- D. CheckValidity

Answer: C

Explanation:

To implement a custom Terms and Conditions checkbox at checkout in the Aura Commerce template, a developer should add a Desired Delivery Date input field during the checkout flow. The Desired Delivery Date input field allows the customer to enter a date when they want their order to be delivered. The developer can use the @api decorator to expose this field as a public property of the Lightning web component and bind it to the ccCheckoutOrder object. The developer can also use the @wire decorator to get the current cart object and use its properties, such as shipping address and shipping method, to calculate and display an estimated delivery date based on the desired delivery date. The developer can also add validation logic to ensure that the desired delivery date is valid and acceptable. Adding the Expected Delivery Date field to the order confirmation email is not a good solution, as it does not allow the customer to choose or see their delivery date before placing their order. Displaying the Expected Delivery Date on the order page with a Lightning web component is not a good solution either, as it does not allow the customer to enter or change their delivery date after placing their order. Configuring an email alert to the customer when the Expected Delivery Date changes is not a good solution either, as it does not provide a consistent or reliable way of informing the customer about their delivery date.

Salesforce B2B Commerce Developer Guide: Checkout Flow, B2B Commerce Developer Guide: Checkout Order Object, Lightning Web Components Developer Guide: Communicate with Properties

NEW QUESTION # 200

A user wants to leverage a three column layout on a page. The user also wants to move the mini-cart widget from the right to the center column. How can this requirement be fulfilled?

- A. HandleBar Template Override
- **B. Gross Layout Override**
- C. Page Include
- D. Subscriber Template

Answer: B

Explanation:

To leverage a three column layout on a page and move the mini-cart widget from the right to the center column, the requirement can be fulfilled by creating a Gross Layout Override. This is a custom Visualforce page that overrides the default layout of a page and allows changing its structure and content. The user can create a Gross Layout Override that uses a three column layout and places the mini-cart widget in the center column. Salesforce B2B Commerce and D2C Commerce Developer Guide, Gross Layout Overrides

NEW QUESTION # 201

Which two practices are allowed when it comes to naming a Lightning Web Components folder and associated files?

- A. Including whitespace
- B. Using a single hyphen (dash)
- C. Beginning with a lowercase letter
- D. Using a single underscore

Answer: B,C

Explanation:

When naming a Lightning Web Components folder and associated files, Salesforce best practices allow the name to begin with a lowercase letter and to use a single hyphen (dash) for compound names. Whitespace and underscores are not recommended in the naming convention. This is in line with web standards for custom elements. More details can be found in the Salesforce LWC documentation on naming conventions: Salesforce LWC Naming Conventions.

NEW QUESTION # 202

A developer needs to create an event listener on a parent component programmatically. With the script below, what should replace the text `<EVENT LISTENER UNE>`?

- A. `this.template.addEventListener(handleNotification);`
- B. `this.template.addEventListener(this.handleNotification);`
- C. `this.template.addEventListener(notification1, this.handleNotification);`
- D. `addEventListener(notificationV, this.handleNotification);`

Answer: C

Explanation:

To create an event listener on a parent component programmatically, the developer should use the following line of code: `this.template.addEventListener('notification', this.handleNotification);` This line of code adds an event listener to the template element of the parent component, which is the root element that contains all the child elements. The event listener listens for an event named 'notification', which is a custom event that can be dispatched by any child component. The event listener invokes a method named `handleNotification`, which is an arrow function defined in the parent component class. The `handleNotification` method receives the event object as a parameter and can perform any logic based on the event data. The other lines of code are either incorrect or incomplete. Salesforce Lightning Web Components Developer Guide: Communicate with Events, Lightning Web Components Developer Guide: Create and Dispatch Events

NEW QUESTION # 203

.....

Passing Salesforce real exam is not so simple. Choose right AP-202 exam prep is the first step to your success. The valid braindumps of Prep4sureExam is a good guarantee to your success.
