### 질문 # 37

What tool would you use for managing project tasks and Solution Documentation when implementing SAP S/4HANA Cloud, public edition?

- A. SAP Cloud ALM
- B. SAP Transformation Navigator
- C. SAP Roadmap Viewer
- D. SAP Signavio Process Navigator

정답: A

#### 설명:

Managing project tasks and solution documentation during the implementation of SAP S/4HANA Cloud Public Edition requires a robust application lifecycle management tool that integrates with the SAP Activate methodology. The tool must support task tracking, deliverable management, and documentation of the solution configuration.

\* Option A: SAP Transformation NavigatorIncorrect. SAP Transformation Navigator is a strategic tool for assessing and planning SAP solution landscapes, not for managing project tasks or solution documentation. The SAP S/4HANA Cloud Implementation Guidestates, "SAP Transformation Navigator helps customers plan their transformation journey, but it is not designed for project task management or solution documentation."

\* Option B: SAP Signavio Process NavigatorIncorrect. SAP Signavio Process Navigator provides process models and best practices but does not manage project tasks or solution documentation. The SAP Signavio Documentationnotes, "SAP Signavio Process Navigator supports process modeling and analysis, not project management or documentation tasks."

\* Option C: SAP Roadmap ViewerIncorrect. SAP Roadmap Viewer provides visibility into the SAP Activate roadmap but lacks task management or documentation capabilities. The SAP Activate Methodology Guideclarifies, "SAP Roadmap Viewer is a

reference tool for viewing the Activate roadmap, not an active management tool for tasks or documentation."

\* Option D: SAP Cloud ALM Correct. SAP Cloud ALM (Application Lifecycle Management) is the primary tool for managing project tasks, deliverables, and solution documentation during SAP S

/4HANA Cloud Public Edition implementations. The SAP Cloud ALM Implementation Guide explains,

"SAP Cloud ALM supports the implementation of SAP S/4HANA Cloud Public Edition by providing capabilities for project task management, deliverable tracking, and solution documentation, fully aligned with the SAP Activate methodology." Extract from Official Documentation:

\* SAP Cloud ALM Implementation Guide (SAP Help Portal, <https://help.sap.com>): "SAP Cloud ALM is the recommended tool for managing project tasks and solution documentation during SAP S/4HANA Cloud Public Edition implementations, offering a centralized platform for task assignment, progress tracking, and documentation of the configured solution."

### 질문 # 38

In the SAP Activate run phase the new system is monitored, maintained, and optimized to ensure it runs smoothly and efficiently. Which change management activity can only be realized in the run phase of the cloud implementation?

- A. Mapping of SAP roles to employees
- B. Development of the user adoption strategy
- C. Conduction of a pulse check
- D. Measurement of actual user adoption metrics

정답: D

설명:

The Run phase of the SAP Activate methodology focuses on operating, monitoring, and optimizing the SAP S/4HANA Cloud Public Edition system post-go-live. Certain change management activities are unique to this phase due to their reliance on live system usage.

\* Option A: Mapping of SAP roles to employees Incorrect. Role mapping occurs in the Explore or Realize phases, when business roles are aligned with employee responsibilities. The SAP S/4HANA Cloud Security Guide states, "Role mapping is completed pre-go-live to ensure users have appropriate access upon system activation."

\* Option B: Development of the user adoption strategy Incorrect. The user adoption strategy is developed in the Prepare or Explore phases to guide change management efforts. The SAP S/4HANA Cloud OCM Guide notes, "The user adoption strategy is defined early in the project to drive effective change management throughout the implementation."

\* Option C: Measurement of actual user adoption metrics Correct. Measuring actual user adoption metrics, such as system usage or process adherence, can only occur in the Run phase when the system is live and users are actively engaging with it. The SAP Activate Methodology Guide explains, "In the Run phase, change management includes measuring actual user adoption metrics to assess the effectiveness of adoption efforts and identify areas for improvement."

\* Option D: Conduction of a pulse check Incorrect. Pulse checks, which gauge stakeholder sentiment, can be conducted in multiple phases, including Prepare and Explore, to monitor change readiness. The SAP OCM Guide clarifies, "Pulse checks are performed throughout the project lifecycle to assess stakeholder engagement, not exclusively in the Run phase." Extract from Official Documentation:

\* SAP Activate Methodology Guide (SAP Community, <https://community.sap.com>): "The Run phase includes unique change management activities such as measuring actual user adoption metrics, which rely on live system data to evaluate the success of adoption initiatives."

\* SAP S/4HANA Cloud OCM Guide (SAP Help Portal, <https://help.sap.com>): "Measuring user adoption metrics is a Run phase activity that assesses how effectively users are engaging with the SAP S/4HANA Cloud system, enabling targeted optimization efforts."

Additional Context:

Measuring user adoption metrics in the Run phase provides actionable insights into system usage, helping organizations refine

training, address resistance, and maximize ROI. This activity is unique to the post-go-live environment, distinguishing it from planning or preparatory change management tasks.

### 질문 # 39

What does the Side-by-Side extensibility option mean?

- A. Extending SAP S/4HANA using SAP ABAP Development Workbench.
- B. SAP S/4HANA extensions are context-aware and focused on tight integration.
- C. There are two SAP S/4HANA instances: one for standard code and another for custom developments.
- **D. Extend SAP S/4HANA using APIs published on SAP Business Accelerator Hub.**

**정답: D**

**설명:**

Side-by-Side extensibility is a key approach in SAP S/4HANA Cloud Public Edition to extend functionality while maintaining cloud compliance, leveraging external platforms and APIs to avoid modifying core system code.

\* Option A: SAP S/4HANA extensions are context-aware and focused on tight integration. Incorrect.

While extensions may be context-aware and integrated, this describes in-app extensibility, not Side-by-Side. The SAP S/4HANA Cloud Extensibility Guide states, "Context-aware, tightly integrated extensions are typically in-app, not Side-by-Side, which uses external platforms."

\* Option B: Extending SAP S/4HANA using SAP ABAP Development Workbench. Incorrect. The ABAP Development Workbench is used for in-app extensibility, not Side-by-Side. The SAP S/4HANA Cloud Study Guide notes, "ABAP Development Workbench supports in-app extensions, while Side-by-Side extensibility leverages cloud platforms like SAP BTP."

\* Option C: Extend SAP S/4HANA using APIs published on SAP Business Accelerator Hub.

Correct. Side-by-Side extensibility involves developing extensions on external platforms like SAP BTP using APIs from the SAP Business Accelerator Hub. The SAP S/4HANA Cloud Extensibility Guide explains, "Side-by-Side extensibility means extending SAP S/4HANA using APIs published on the SAP Business Accelerator Hub, enabling custom applications on platforms like SAP BTP without modifying the core system."

\* Option D: There are two SAP S/4HANA instances: one for standard code and another for custom developments. Incorrect. Side-by-Side extensibility does not involve multiple SAP S/4HANA instances; it uses external platforms. The SAP S/4HANA Cloud Implementation Guide clarifies, "Side-by-Side extensibility leverages external systems, not separate SAP S/4HANA instances, for custom developments." Extract from Official Documentation:

\* SAP S/4HANA Cloud Extensibility Guide (SAP Help Portal, <https://help.sap.com>): "Side-by-Side extensibility involves extending SAP S/4HANA Cloud using APIs published on the SAP Business Accelerator Hub, enabling custom applications on platforms like SAP BTP to maintain cloud compliance."

\* SAP S/4HANA Cloud Implementation Guide (SAP Community, <https://community.sap.com>): "Side-by-Side extensibility uses APIs from the SAP Business Accelerator Hub to develop extensions on external platforms, ensuring the SAP S/4HANA core remains standard and upgrade-safe." Additional Context:

Side-by-Side extensibility is a cornerstone of SAP's clean core strategy, allowing customers to build custom applications on SAP BTP while keeping the SAP S/4HANA Cloud core unmodified. The SAP Business Accelerator Hub provides a rich repository of APIs, enabling seamless integration and scalability, aligning with the cloud's continuous innovation model.

:

SAP Help Portal: SAP S/4HANA Cloud Extensibility Guide (<https://help.sap.com>).

SAP Community: SAP S/4HANA Cloud Implementation Guide (<https://community.sap.com>).
