最新的 Oracle Cloud Infrastructure 1Z0-1123-25 免費考試真題 (Q33-Q38):

問題 #33

Which two are business goals of database migration?

- A. Reduce capital and operational expenses
- B. Migrate applications and databases into the same host servers to reduce network latency
- C. Migrate all databases to the latest release
- D. Consolidate databases to optimize resource utilization and cost

答案: A,D

解題說明:

Consolidating databases to optimize resource utilization and cost and reducing capital and operational expenses are common business goals of database migration.

問題 #34

You have been tasked with provisioning an Oracle Cloud Infrastructure Container Engine for Kubernetes (OKE) cluster to deploy new applications and manage existing ones. Which two statements are FALSE?

- A. The only available option when a cluster's Kubernetes API endpoint has a public IP address is to control the cluster locally using kubectl and the Kubernetes Dashboard
- B. To access the cluster using kubectl, you have to set up a Kubernetes manifest file stored in the \$HOME/.manifest directory
- C. When a cluster's Kubernetes API endpoint has a public IP address, you can access the cluster in Cloud Shell by setting up a kubeconfig file
- D. To access the cluster using kubectl, you have to set up a Kubernetes configuration file stored in the \$HOME/.kube directory

答案: A,B

解題說明:

Setting up a Kubernetes manifest file in the \$HOME/.manifest directory is not a standard practice for accessing a Kubernetes cluster using kubectl. Manifest files are used to define and manage Kubernetes resources, such as pods, deployments, and services, but they are not used for configuring access to the cluster.

While controlling the cluster locally using kubectl and the Kubernetes Dashboard is one way to interact with a cluster, it is not the only available option when a cluster's Kubernetes API endpoint has a public IP address. You can also access and manage the cluster remotely using kubectl from any environment that has network connectivity to the cluster.

問題 #35

You are a migration architect responsible for managing data storage solutions in Oracle Cloud Infrastructure (OCI). You configured a Storage Gateway file system on a local host running in an on-premises datacenter, which maps to an Object Storage bucket with an identical name in OCI. What happens when a file is written to a Storage Gateway file system?

- A. The file is uploaded to OCI Object Storage synchronously
- **B. The file is written as an object with the same name in the associated Object Storage bucket**
- C. The file is replicated to multiple Object Storage buckets for redundancy
- D. The file is stored locally on the host machine

答案： B

解題說明：

When a file is written to a Storage Gateway file system, it is written as an object with the same name in the associated Object Storage bucket in OCI. This allows for seamless integration and synchronization between the local file system and the cloud-based Object Storage.

問題 #36

You are a migration architect responsible for migrating 100 TB of on-premises data to Oracle Cloud Infrastructure (OCI). Because of limited bandwidth and security concerns, transferring the data over the public Internet is not feasible. Which OCI service would you recommend to efficiently transfer the large volume of on-premises data to OCI while ensuring data security?

- A. Data Integration
- B. Storage Gateway
- C. Snowball
- **D. Data Transfer Service**

答案： D

解題說明：

Data Transfer Service in OCI is specifically designed for efficiently transferring large volumes of data to OCI while ensuring data security. It provides high-speed data transfer over dedicated network connections, making it the ideal choice for migrating 100 TB of on-premises data to OCI.

問題 #37

Your company is looking to migrate its IT infrastructure into Oracle Cloud VMware Solution (OCVS). The source infrastructure includes a variety of workloads, such as a few business-critical VMs that require continuous availability, and a large set of non-critical dev-test VMs. As a migration cloud architect, you are exploring Hybrid Cloud Extension (HCX) migration methods to identify the best approaches for each type of workload. Which HCX migration method would be the most appropriate to use in order to migrate both business-critical VMs and dev-test VMs?

- A. HCX Bulk Migration for migrating the business-critical VMs, and Cold Migrations for non-critical dev-test VMs
- B. HCX Bulk Migration for migrating business-critical VMs and HCX vMotion for non-critical dev-test VMs
- **C. HCX vMotion for migrating business-critical VMs, and Cold Migrations for non-critical dev-test VMs**
- D. Cold Migration for migrating both business-critical and non-critical dev-test VMs

答案： C

解題說明：

HCX vMotion is the most appropriate method for migrating business-critical VMs as it allows live migration without downtime, ensuring continuous availability. Cold Migrations can be used for non-critical dev-test VMs since downtime is acceptable for these

workloads.
