Free PDF 2026 Snowflake ARA-C01: Marvelous SnowPro Advanced Architect Certification Exam Dumps

DOWNLOAD the newest CertkingdomPDF ARA-C01 PDF dumps from Cloud Storage for free: https://drive.google.com/open?id=1gdHI-3oVIMRuGuY7S3Fz-KL268MIflS_

As is known to us, the leading status of the knowledge-based economy has been established progressively. It is more and more important for us to keep pace with the changeable world and improve ourselves for the beautiful life. Our company can help you solve the problem and get your certification, because our company has compiled the ARA-C01 question torrent that not only have high quality but also have high pass rate. We believe that our ARA-C01 exam questions will help you get the certification in the shortest. So hurry to buy our ARA-C01 exam torrent, you will like our products.

The SnowPro Advanced Architect Certification is a comprehensive exam that tests the candidate's knowledge of Snowflake's advanced features, including Snowflake data sharing, multi-cluster and multi-region data replication, and advanced security features. It tests the candidate's ability to design and implement Snowflake environments that are highly scalable, performant, and secure. SnowPro Advanced Architect Certification certification also validates the candidate's ability to troubleshoot complex Snowflake environments and resolve performance issues.

ARA-C01 Prep Guide & ARA-C01 Guide Torrent

CertkingdomPDF allow its valuable customer to download a free demo of SnowPro Advanced Architect Certification ARA-C01 pdf questions and practice tests before purchasing. In the case of Snowflake ARA-C01 exam content changes, CertkingdomPDF provides free 365 days updates after the purchase of Snowflake ARA-C01 exam dumps. CertkingdomPDF' main goal is to provide

you best Snowflake ARA-C01 Exam Preparation material. So this authentic and accurate SnowPro Advanced Architect Certification ARA-C01 practice exam material will help you to get success in SnowPro Advanced Architect Certification exam certification with excellent results.

Achieving the SnowPro Advanced Architect Certification demonstrates a high level of proficiency and expertise in designing and implementing complex data solutions with Snowflake. SnowPro Advanced Architect Certification certification can enhance an individual's career opportunities and provide a competitive edge in the rapidly growing field of cloud data management.

Snowflake ARA-C01 exam is a challenging exam that requires a significant amount of preparation and study. Candidates should have experience working with Snowflake and should be familiar with Snowflake best practices and implementation strategies. ARA-C01 Exam consists of multiple-choice questions and scenario-based questions that test the candidate's ability to design and implement Snowflake solutions. Candidates who pass the exam will earn the SnowPro Advanced Architect certification, which is a highly respected certification in the data warehousing industry.

Snowflake SnowPro Advanced Architect Certification Sample Questions (Q131-Q136):

NEW QUESTION # 131
Which query will identify the specific days and virtual warehouses that would benefit from a multi-cluster warehouse to improve the performance of a particular workload?

```
SELECT TO_DATE(START_TIME) AS DATE,
WAREHOUSE_NAME,
BYTES_SPILLED_TO_LOCAL_STORAGE,
SUM(AVG_QUEUED_LOAD) AS SUM_QUEUED
FROM "SNOWFLAKE"."ACCOUNT_USAGE"."QUERY_HISTORY"
HAVING BYTES_SPILLED_TO_LOCAL_STORAGE >0;
```

- A.

```
SELECT TO_DATE(START_TIME) AS DATE,
WAREHOUSE_NAME,
BYTES_SCANNED,
BYTES_SPILLED
FROM "SNOWFLAKE"."ACCOUNT_USAGE"."WAREHOUSE_LOAD_HISTORY"
HAVING BYTES_SPILLED>BYTES_SCANNED;
```

- B.
- C.

```
SELECT TO_DATE(START_TIME) AS DATE,
WAREHOUSE_NAME,
SUM(AVG_RUNNING) AS SUM_RUNNING,
SUM(AVG_QUEUED_LOAD) AS SUM_QUEUED
FROM "SNOWFLAKE"."ACCOUNT_USAGE"."WAREHOUSE_LOAD_HISTORY"
GROUP BY 1,2
HAVING SUM(AVG_QUEUED_LOAD) > 0;
```

```
SELECT TO_DATE(START_TIME) AS DATE,
WAREHOUSE_NAME,
BYTES_SCANNED,
BYTES_SPILLED
FROM "SNOWFLAKE"."ACCOUNT_USAGE"."QUERY_HISTORY"
HAVING BYTES_SPILLED>BYTES_SCANNED;
```

- D.

Answer: C

Explanation:

The correct answer is option B. This query is designed to assess the need for a multi-cluster warehouse by examining the queuing time (AVG_QUEUED_LOAD) on different days and virtual warehouses. When the AVG_QUEUED_LOAD is greater than zero, it suggests that queries are waiting for resources, which can be an indicator that performance might be improved by using a multi-cluster warehouse to handle the workload more efficiently. By grouping by date and warehouse name and filtering on the sum of the average queued load being greater than zero, the query identifies specific days and warehouses where the workload exceeded the available compute resources. This information is valuable when considering scaling out warehouses to multi-cluster configurations for improved performance.

NEW QUESTION # 132

Which feature provides the capability to define an alternate cluster key for a table with an existing cluster key?

- A. External table
- B. Search optimization
- C. Materialized view
- D. Result cache

Answer: C

Explanation:

A materialized view is a feature that provides the capability to define an alternate cluster key for a table with an existing cluster key. A materialized view is a pre-computed result set that is stored in Snowflake and can be queried like a regular table. A materialized view can have a different cluster key than the base table, which can improve the performance and efficiency of queries on the materialized view. A materialized view can also support aggregations, joins, and filters on the base table data. A materialized view is automatically refreshed when the underlying data in the base table changes, as long as the AUTO_REFRESH parameter is set to true1.
Reference:
Materialized Views | Snowflake Documentation

NEW QUESTION # 133

Consider the following COPY command which is loading data with CSV format into a Snowflake table from an internal stage through a data transformation query.

```
copy into home_sales(city, zip, sale_date, price)
from (select t.$1, t.$2, t.$6, t.$7 from @mystage/sales.csv.qz t)
file_format =
(
format_name = mycsvformat
empty_field_as_null = true
field_optionally_enclosed_by = '"'
)
validation_mode - return_all_errors
;
```

This command results in the following error:
SQL compilation error: invalid parameter 'validation_mode'
Assuming the syntax is correct, what is the cause of this error?

- A. The VALIDATION_MODE parameter does not support COPY statements with CSV file formats.
- B. The VALIDATION_MODE parameter does not support COPY statements that transform data during a load.
- C. The VALIDATION_MODE parameter supports COPY statements that load data from external stages only.
- D. The value return_all_errors of the option VALIDATION_MODE is causing a compilation error.

Answer: B

Explanation:

* The VALIDATION_MODE parameter is used to specify the behavior of the COPY statement when loading data into a table. It is used to specify whether the COPY statement should return an error if any of the rows in the file are invalid or if it should continue loading the valid rows. The VALIDATION_MODE parameter is only supported for COPY statements that load data from external

stages1.

* The query in the question uses a data transformation query to load data from an internal stage. A data transformation query is a query that transforms the data during the load process, such as parsing JSON or XML data, applying functions, or joining with other tables2.

* According to the documentation, VALIDATION_MODE does not support COPY statements that transform data during a load. If the parameter is specified, the COPY statement returns an error1.

Therefore, option C is the correct answer.

COPY INTO <table> : Transforming Data During a Load

NEW QUESTION # 134

When loading data into a table that captures the load time in a column with a default value of either CURRENT_TIME() or CURRENT_TIMESTAMP() what will occur?

- A. All rows loaded using a specific COPY statement will have the same timestamp value.
- B. All rows loaded using a specific COPY statement will have varying timestamps based on when the rows were inserted.
- C. Any rows loaded using a specific COPY statement will have varying timestamps based on when the rows were read from the source.
- D. Any rows loaded using a specific COPY statement will have varying timestamps based on when the rows were created in the source.
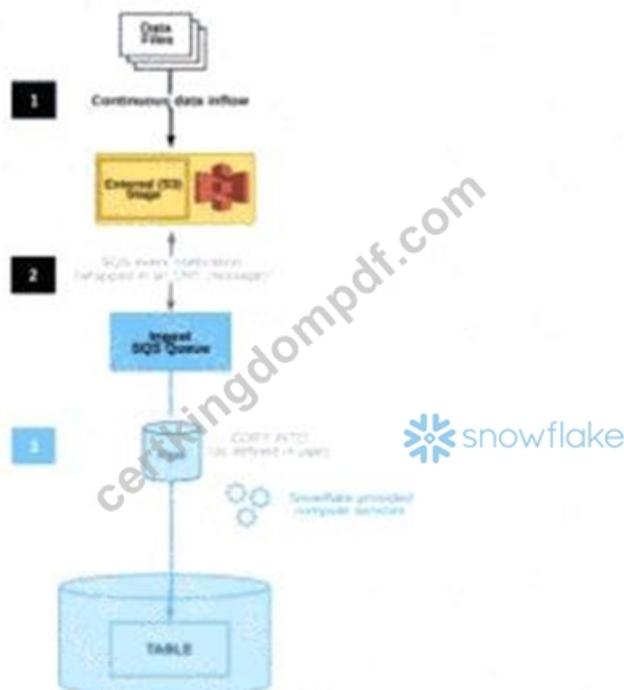

Answer: D

NEW QUESTION # 135

The diagram shows the process flow for Snowpipe auto-ingest with Amazon Simple Notification Service (SNS) with the following steps:

Step 1: Data files are loaded in a stage.

Step 2: An Amazon S3 event notification, published by SNS, informs Snowpipe - by way of Amazon Simple Queue Service (SQS) - that files are ready to load. Snowpipe copies the files into a queue.

Step 3: A Snowflake-provided virtual warehouse loads data from the queued files into the target table based on parameters defined in the specified pipe.

If an AWS Administrator accidentally deletes the SQS subscription to the SNS topic in Step 2, what will happen to the pipe that references the topic to receive event messages from Amazon S3?

- A. The pipe will continue to receive the messages as Snowflake will automatically restore the subscription to the same SNS topic and will recreate the pipe by specifying the same SNS topic name in the pipe definition.
- B. The pipe will continue to receive the messages as Snowflake will automatically restore the subscription by creating a new

SNS topic. Snowflake will then recreate the pipe by specifying the new SNS topic name in the pipe definition.

- C. The pipe will no longer be able to receive the messages. To restore the system immediately, the user needs to manually create a new SNS topic with a different name and then recreate the pipe by specifying the new SNS topic name in the pipe definition.
- D. The pipe will no longer be able to receive the messages and the user must wait for 24 hours from the time when the SNS topic subscription was deleted. Pipe recreation is not required as the pipe will reuse the same subscription to the existing SNS topic after 24 hours.

Answer: C

Explanation:
If an AWS Administrator accidentally deletes the SQS subscription to the SNS topic in Step 2, the pipe that references the topic to receive event messages from Amazon S3 will no longer be able to receive the messages. This is because the SQS subscription is the link between the SNS topic and the Snowpipe notification channel. Without the subscription, the SNS topic will not be able to send notifications to the Snowpipe queue, and the pipe will not be triggered to load the new files. To restore the system immediately, the user needs to manually create a new SNS topic with a different name and then recreate the pipe by specifying the new SNS topic name in the pipe definition. This will create a new notification channel and a new SQS subscription for the pipe. Alternatively, the user can also recreate the SQS subscription to the existing SNS topic and then alter the pipe to use the same SNS topic name in the pipe definition. This will also restore the notification channel and the pipe functionality. References:
