2022/16/10/41      Palo Alto Networks Certified Network Security Engineer (PCNSE) Exam Practice Questions

application on a server that resides in the TrustL3 zone. The web server is associated with the following IP addresses: Web Server Public IP: 2.2.2.1/24, Web Server Private IP: 192.168.1.10/24. The security administrator configures the following twozone UTurn NAT rule to allow users using 10.10.1.0/24 in the Trust L3 zone to access the web server using its public IP address in the UntrustL3 zone. Which statement is true in this situation?

- The traffic will be considered intrazone based on the translated destination zone.
- A second rule should be created to accommodate the server-to-client flow.
- The rule should be made bidirectional to accommodate the server-to-client flow.
- Source translation is required because the destination address is in the same zone as the source.

Question 3 of 67

+1 ✓

A company has decided to install a Palo Alto Networks firewall using VWire interfaces. Because of preexisting network configurations, the traffic on the upstream and downstream devices can have 802.1Q tags with the following values: 5, 10, 11, 12, 13, 14, 15, 25, and 30. How should the network administrator configure the Tag Allowed field of the VWire to allow only traffic with 802.1Q tag values of 11, 12, and 14?

## PCNSE Valid Exam Camp Pdf | PCNSE Pdf Braindumps

Successful people are those who never stop advancing. They are interested in new things and making efforts to achieve their goals. If

you still have dreams and never give up, you just need our PCNSE actual test guide to broaden your horizons and enrich your experience you can enjoy the first-class after sales service. Whenever you have questions about our PCNSE Actual Test guide, you will get satisfied answers from our online workers through email. We are responsible for all customers. All of our PCNSE question materials are going through strict inspection. The quality completely has no problem. The good chance will slip away if you still hesitate.

The PCNSE Certification program has been designed to ensure that candidates have a deep understanding of the Palo Alto Networks security platform, including Next-Generation Firewalls, Panorama management, and other related technologies. The program covers a wide range of topics, including firewall configuration, network security, VPN setup, user identification, and application control. Candidates need to demonstrate their proficiency in these areas to pass the exam and earn the certification.

## Palo Alto Networks Certified Network Security Engineer Exam Sample Questions (Q368-Q373):

### NEW QUESTION # 368

**Log Forwarding Profile**

Name: global-logs

Shared

Enable enhanced application logging to Cortex Data Lake (including traffic and url logs)

Disable override

Description:

NAME	LOG TYPE	FILTER	FORWARD METHOD	BUILT-IN ACTIONS
Alert - Threats	threat	(addr.src notin '192.168.0.0/16') and (severity geq medium)	Email • smtp	Tagging • BlockBadGuys
Alerts - WF-malicious	wildfire	(verdict eq malicious)	Email • smtp	Tagging • WF-Bloc...
Decryption	decryption	All Logs	Panorama/Cortex Data Lake	
PANO-auth	auth	All Logs	Panorama/Cortex Data Lake	
PANO-data	data	All Logs	Panorama/Cortex Data Lake	
PANO-threat	threat	All Logs	Panorama/Cortex Data	

+ Add - Delete  Clone

**Action**

Name: BlockBadGuys

Type:  Integration  Tagging

**Tagging**

Target: Source Address

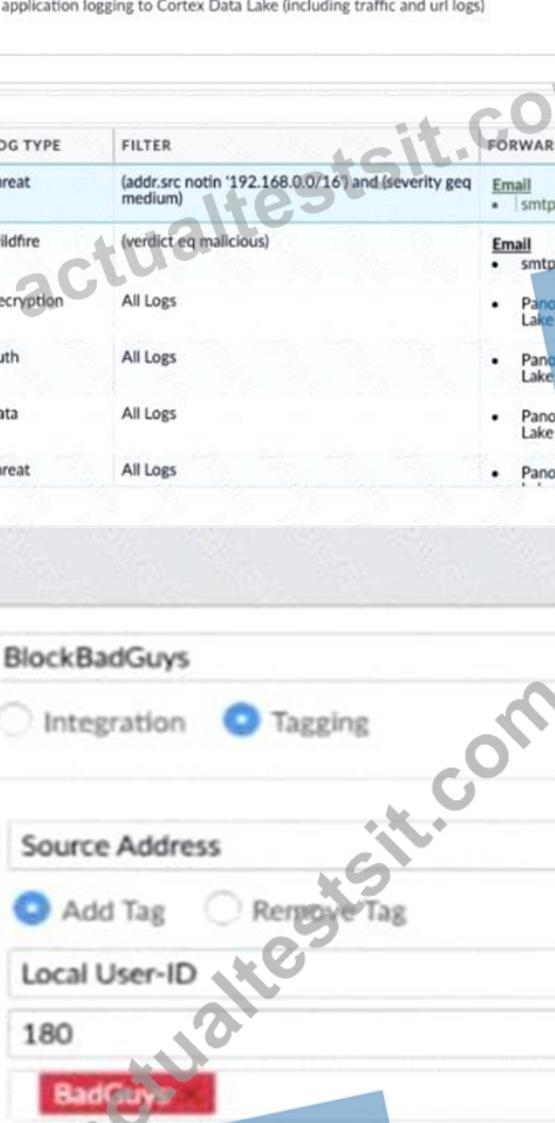

Action:  Add Tag  Remove Tag

Registration: Local User-ID

Timeout (min): 180

Tags: BadGuys

OK Cancel

Review the images. A firewall policy that permits web traffic includes the global-logs policy is depicted. What is the result of traffic that matches the "Alert - Threats" Profile Match List?

- A. The source address of traffic that matches a threat is automatically blocked as BadGuys for 180 minutes.
- B. The source address of traffic that matches a threat is automatically tagged as BadGuys for 180 minutes.
- C. The source address of SMTP traffic that matches a threat is automatically tagged as BadGuys for 180 minutes.
- D. The source address of SMTP traffic that matches a threat is automatically blocked as BadGuys for 180 minutes.

**Answer: B**

#### NEW QUESTION # 369

Using multiple templates in a stack to manage many firewalls provides which two advantages? (Choose two.)

- A. standardize server profiles and authentication configuration across all stacks
- B. standardize log-forwarding profiles for security policies across all stacks
- C. inherit address-objects from templates
- D. define a common standard template configuration for firewalls

**Answer: A,D**

Explanation:

Using multiple templates in a stack to manage many firewalls provides the advantages of defining a common standard template configuration for firewalls and standardizing server profiles and authentication configuration across all stacks. A template stack is a container for multiple templates that you can assign to firewalls and firewall groups. The templates in a stack are prioritized so that the settings in a higher-priority template override the same settings in a lower-priority template. This allows you to create a hierarchy of templates that define common settings for all firewalls and specific settings for different groups of firewalls. Reference: <https://docs.paloaltonetworks.com/panorama/9-1/panorama-admin/manage-firewalls/manage-templates-and-template-stacks>

#### NEW QUESTION # 370

The server team is concerned about the high volume of logs forwarded to their syslog server, it is determined that DNS is generating the most logs per second. The risk and compliance team requests that any Traffic logs indicating port abuse of port 53 must still be forwarded to syslog. All other DNS Traffic logs can be excluded from syslog forwarding. How should syslog log forwarding be configured?

- A. With '(port dst neq 53)' Traffic log filter inside Device > log Settings.
- B. With '(port,dst neq 53)' Traffic log filter Object > Log Forwarding.
- C. With '(app neq dns-base)' Traffic log filter inside Device> Log Settings.
- D. With '(app neq dns-base)' Traffic log filter inside Objects> Log Forwarding

**Answer: B**

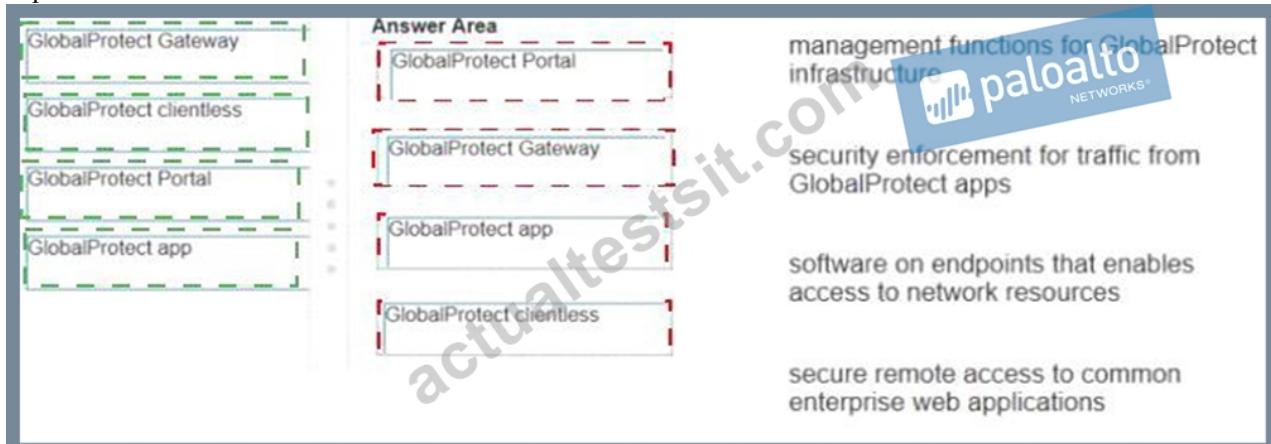

#### NEW QUESTION # 371

Match each GlobalProtect component to the purpose of that component

GlobalProtect Gateway	Answer Area	management functions for GlobalProtect infrastructure
GlobalProtect clientless		paloalto NETWORKS®
GlobalProtect Portal		security enforcement for traffic from GlobalProtect apps
GlobalProtect app		software on endpoints that enables access to network resources
		secure remote access to common enterprise web applications

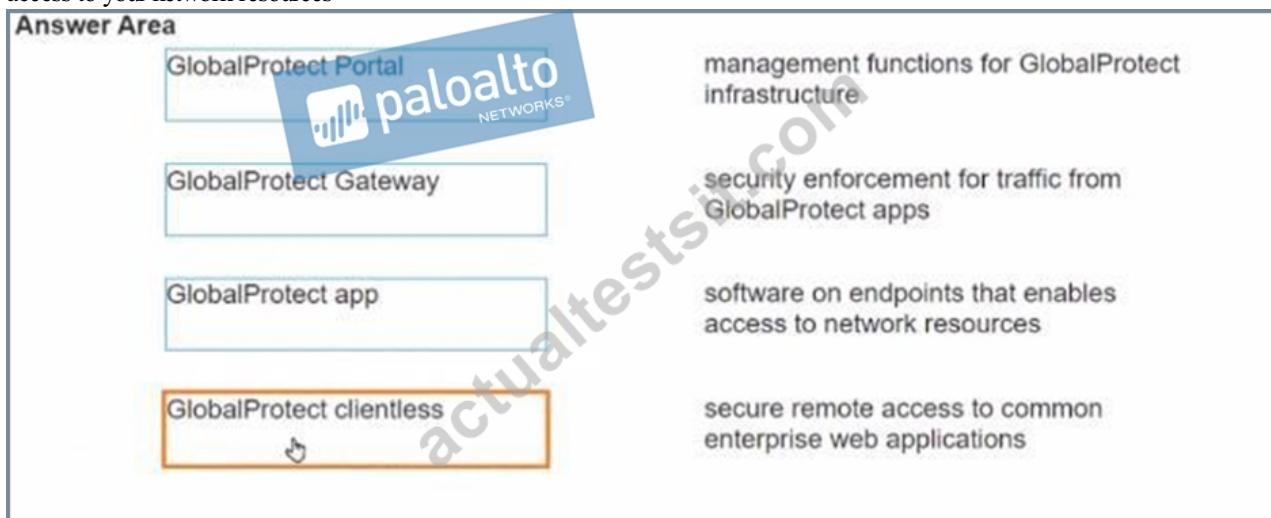

**Answer:**

Explanation:

Explanation

The GlobalProtect portal provides the management functions for your GlobalProtect infrastructure. The GlobalProtect gateways provide security enforcement for traffic from GlobalProtect apps. The GlobalProtect app software runs on endpoints and enables access to your network resources.

**NEW QUESTION # 372**

An administrator is using Panorama and multiple Palo Alto Networks NGFWs. After upgrading all devices to the latest PAN-OS® software, the administrator enables log forwarding from the firewalls to PanoramA. Pre-existing logs from the firewalls are not appearing in PanoramA.

Which action would enable the firewalls to send their pre-existing logs to Panorama?

- A. Export the log database
- B. Use the ACC to consolidate the logs
- **C. Use the scp logdb export command**
- D. Use the import option to pull logs.

**Answer: C**

Explanation:

commands:

request logdb

migrate-to-panorama start end-timestart-timetype
